NOTICE OF PREPARATION
City of Oceanside, California

To: Office of Planning and Research
Responsible and Trustee Agencies
Other Interested Parties

Subject: Notice of Preparation of an Environmental Impact Report (EIR)

Project: Pacifica Residential Development Project

Lead Agency: City of Oceanside

Date: November 1, 2022

Pursuant to Section 15082(a) of the California Environmental Quality Act (1970), the City of Oceanside will be the lead agency and will require preparation of an environmental impact report for the project described below. Consistent with your agency's statutory authority, the City requests input regarding the scope and content of the EIR. The City has concluded that the project could result in potentially significant environmental impacts and therefore an EIR is required. The project description and location are included herein.

Pursuant to Section 15103 of the CEQA Guidelines, response must be sent at the earliest date and received by our agency no later than thirty (30) days after receipt of this notice. Should you have any questions regarding the project or notice of preparation, please call Shannon Vitale, Senior Planner, at (760) 435-3927. Please mail or e-mail your written response by November 30, 2022, to:

Development Services Department
Attn: Shannon Vitale, Senior Planner
300 N. Coast Hwy.
Oceanside, California 92057
Fax: (760) 435-3927
E-Mail: SVitale@oceansideca.org

City/County Location: City of Oceanside, County of San Diego

Applicant: MLC Holdings, Inc.

Project Location: The project site is the former Pacifica Elementary School located on an approximately 14.55-acre site at 4991 Macario Drive in the City of Oceanside, California. The project site is bound to the north by single-family homes fronting Claire Drive; to the east by Roja Drive; to the south by single-family homes fronting N. Redondo Drive; and to the west by open space. The project site is approximately 0.5 mile from the San Luis Rey Transit Center. The property is currently disturbed with asphalt from the

former elementary school that was demolished in 2004. The General Plan designation for the property is Civic Institution (CI) with the associated zoning category of Civic/Public (PS).

Project Description: The proposed project consists of development of 164 three-story attached townhomes. Of the 14.55-acre site, 10.16 acres would be developed and would have a density of 11.3 dwelling units per acre. The approximately 4 acres that would not be developed consist of 20 to 30-foot-tall slopes along the southeastern and western portions of the project site. Townhomes would range in size from approximately 1,200 square feet to 1,800 square feet with two and three bedrooms and an attached two-car garage. Each townhome would include private open space in the form of a patio and/or deck. Common recreational spaces, consisting of approximately 54,150 square feet, would be designed with amenities such as tot lots, an off-leash dog park, pickle ball courts, bocce ball areas, barbecue areas, and a space for a variety of outdoor games.

Site access would be provided at the corner of Monica Circle and Macario Drive and emergency only access would be provided via a new private driveway from Malaga Drive.

The proposed project would establish a Planned Development District intended to provide zoning, use regulations, and development standards for future development of the site. A Planned Development Plan has been prepared in accordance with the City of Oceanside Zoning Ordinance – Article 17. The Planned Development Plan provides direction for the assignment of land uses, development intensities, development regulation, as well as, design guidelines that will provide a framework for the specific development of the site.

The project would include a General Plan Amendment to revise the land use designation from Civic Institution (CI) to Medium Density Residential-B (MDB-R). A Zone Amendment is also proposed to revise the current zoning from Civic/Public (PS) to Planned Development (PD), with the Pacifica Planned Development Plan service as the regulating document.

Potential Environmental Effects: Pursuant to CEQA Section 15060(d) of the CEQA Guidelines, the project may potentially result in significant impacts related to: Aesthetics, Air Quality, Biological Resources, Cultural Resources, Energy, Geology/Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology/Water Quality, Land Use, Noise, Population and Housing, Transportation, Tribal Cultural Resources, and Utilities/Service Systems. An EIR will be prepared to evaluate the proposed project's potential impacts on the environment, outline mitigation measures, and analyze potential project alternatives.

PUBLIC SCOPING MEETING

The City of Oceanside will hold a public scoping meeting to provide an overview of the project entitlement application and obtain information regarding the content and scope of the Draft Environmental Impact Report (DEIR). This meeting will take place on **Monday, November 14, 2022, at 6:00 p.m. at the Mission Branch Library Community Room,**

located at 3861 Mission Avenue, in the City of Oceanside. The meeting format will consist of a brief project presentation, followed by a public comment period, and open forum with city staff and applicant representatives. All public agencies, organizations and interested parties are encouraged to attend and participate in this meeting.

Entitlement application materials for this project have been submitted to the City and are currently being reviewed by staff and are available for public review either at the City or on the City's eTRAKIT website (https://crw.cityofoceanside.com/etrakit3/) under project number GPA22-00001.

Pacifica Residential Development Project
NOP/SCH#2022110021

Ms. Shannon Vitale
Senior Planner
City of Oceanside
300 N. Coast Highway
Oceanside, CA 92057

Dear Ms. Vitale:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the Notice of Preparation for the Draft Environmental Impact Report (NOP) for the Pacifica Residential Development Project located near State Route 76 (SR-76). The mission of Caltrans is to provide a safe and reliable transportation network that serves all people and respects the environment. The Local Development Review (LDR) Program reviews land use projects and plans to ensure consistency with our mission and state planning priorities.

Safety is one of Caltrans' strategic goals. Caltrans strives to make the year 2050 the first year without a single death or serious injury on California's roads. We are striving for more equitable outcomes for the transportation network's diverse users. To achieve these ambitious goals, we will pursue meaningful collaboration with our partners. We encourage the implementation of new technologies, innovations, and best practices that will enhance the safety on the transportation network. These pursuits are both ambitious and urgent, and their accomplishment involves a focused departure from the status quo as we continue to institutionalize safety in all our work.

Caltrans is committed to prioritizing projects that are equitable and provide meaningful benefits to historically underserved communities, to ultimately improve transportation accessibility and quality of life for people in the communities we serve.

We look forward to working with the City of Oceanside in areas where the City and Caltrans have joint jurisdiction to improve the transportation network and connections

between various modes of travel, with the goal of improving the experience of those who use the transportation system.

Caltrans has the following comments:

Traffic Impact Study

- A Vehicle Miles of Travel (VMT) based Traffic Impact Study (TIS) should be provided for this project. Please use the Governor's Office of Planning and Research Guidance to identify VMT related impacts.[1]

- The TIS may also need to identify the proposed project's near-term and long-term safety or operational issues, on or adjacent to any existing or proposed State facilities.

Complete Streets and Mobility Network

Caltrans views all transportation improvements as opportunities to improve safety, access and mobility for all travelers in California and recognizes bicycle, pedestrian and transit modes as integral elements of the transportation network. Caltrans supports improved transit accommodation through the provision of Park and Ride facilities, improved bicycle and pedestrian access and safety improvements, signal prioritization for transit, bus on shoulders, ramp improvements, or other enhancements that promotes a complete and integrated transportation network. Early coordination with Caltrans, in locations that may affect both Caltrans and the City of Oceanside is encouraged.

To reduce greenhouse gas emissions and achieve California's Climate Change target, Caltrans is implementing Complete Streets and Climate Change policies into State Highway Operations and Protection Program (SHOPP) projects to meet multi-modal mobility needs. Caltrans looks forward to working with the City to evaluate potential Complete Streets projects.

Maintaining bicycle, pedestrian, and public transit access during construction is important. Mitigation to maintain bicycle, pedestrian, and public transit access during construction is in accordance with Caltrans' goals and policies.

[1] California Governor's Office of Planning and Research (OPR) 2018. "Technical Advisory on Evaluating Transportation Impacts in CEQA." https://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf

Land Use and Smart Growth

Caltrans recognizes there is a strong link between transportation and land use. Development can have a significant impact on traffic and congestion on State transportation facilities. In particular, the pattern of land use can affect both local vehicle miles traveled and the number of trips. Caltrans supports collaboration with local agencies to work towards a safe, functional, interconnected, multi-modal transportation network integrated through applicable "smart growth" type land use planning and policies.

The City should continue to coordinate with Caltrans to implement necessary improvements at intersections and interchanges where the agencies have joint jurisdiction.

Environmental

Caltrans welcomes the opportunity to be a Responsible Agency under the California Environmental Quality Act (CEQA), as we have some discretionary authority of a portion of the project that is in Caltrans' R/W through the form of an encroachment permit process. We look forward to the coordination of our efforts to ensure that Caltrans can adopt the alternative and/or mitigation measure for our R/W. We would appreciate meeting with you to discuss the elements of the EIR that Caltrans will use for our subsequent environmental compliance.

An encroachment permit will be required for any work within the Caltrans' R/W prior to construction. As part of the encroachment permit process, the applicant must provide approved final environmental documents for this project, corresponding technical studies, and necessary regulatory and resource agency permits. Specifically, CEQA determination or exemption. The supporting documents must address all environmental impacts within the Caltrans' R/W and address any impacts from avoidance and/or mitigation measures.

We recommend that this project specifically identifies and assesses potential impacts caused by the project or impacts from mitigation efforts that occur within Caltrans' R/W that includes impacts to the natural environment, infrastructure including but not limited to highways, roadways, structures, intelligent transportation systems elements, on-ramps and off-ramps, and appurtenant features including but not limited to lighting, signage, drainage, guardrail, slopes and landscaping. Caltrans is interested in any additional mitigation measures identified for the project's draft Environmental Document.

Broadband

Caltrans recognizes that teleworking and remote learning lessen the impacts of traffic on our roadways and surrounding communities. This reduces the amount of VMT and decreases the amount of greenhouse gas (GHG) emissions and other pollutants. The availability of affordable and reliable, high-speed broadband is a key component in supporting travel demand management and reaching the state's transportation and climate action goals.

Right-of-Way

- Per Business and Profession Code 8771, perpetuation of survey monuments by a licensed land surveyor is required, if they are being destroyed by any construction.
- Any work performed within Caltrans' R/W will require discretionary review and approval by Caltrans and an encroachment permit will be required for any work within the Caltrans' R/W prior to construction.

Additional information regarding encroachment permits may be obtained by contacting the Caltrans Permits Office at (619) 688-6158 or emailing D11.Permits@dot.ca.gov or by visiting the website at https://dot.ca.gov/programs/traffic-operations/ep. Early coordination with Caltrans is strongly advised for all encroachment permits.

If you have any questions or concerns, please contact Kimberly Dodson, LDR Coordinator, at (619) 985-1587 or by e-mail sent to Kimberly.Dodson@dot.ca.gov.

Sincerely,

Re: 2022110021, Pacifica Residential Project, San Diego County

Dear Ms. Vitale:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
   - **a.** A brief description of the project.
   - **b.** The lead agency contact information.
   - **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
   - **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).
   - **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
   - **a.** Alternatives to the project.
   - **b.** Recommended mitigation measures.
   - **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
   - **a.** Type of environmental review necessary.
   - **b.** Significance of the tribal cultural resources.
   - **c.** Significance of the project's impacts on tribal cultural resources.
   - **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
   - **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
   - **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Pricilla.Torres-Fuentes@nahc.ca.gov.

Sincerely,

Pricilla Torres-Fuentes

Subject: Notice of Preparation of a Draft Environmental Impact Report
Pacifica Residential Development Project

Dear Ms. Vitale:

Thank you for the Notice of Preparation for the subject project, which was received by this Society last month.

We are pleased to note the inclusion of historical resources in the list of subject areas to be addressed in the DEIR and look forward to reviewing it during the upcoming public comment period. To that end, please include us in notification of the public review of the DEIR and ensure availability of a copy of the cultural resources technical report(s).

SDCAS appreciates being included in the environmental review process for this project.

Sincerely,

James W. Royle, Jr., Chairperson
Environmental Review Committee

Subject: Pacifica Residential Development Project

Warning: External Source

Good morning,

I would like to express my opinion regarding the Pacifica Residential Development Project. I strongly oppose this project. Shoe-horning a large project into an overcrowded older neighborhood will have a negative impact and create potentially dangerous conditions for the existing neighborhoods that surround it.

Traffic and parking in the area are already at or over capacity. The egress of over 300 vehicles onto narrow, overpacked residential streets with a fair amount of foot traffic, is not only dangerous for the potential residents and the existing residents in an emergency, it will add to existing traffic issues.

There are only two directions to leave this area. If these vehicles exit up Monica and left on Claire, the streets very narrow and every inch of curb is full about 99% of the time. If there are any extra cars in the new development they will either have to walk for blocks to park, or take spaces from current residents who will no longer be able to park near their homes. Additionally, they will have to continue their exit down Marblehead Bay which has lots of congestion during school hours with both parking and children crossing the street to get to the school around the corner on Douglas. It is already difficult to safely exit onto Douglas at rush hour and school drop off/pick up times, without the addition of hundreds of vehicles from a new development.

The other option to exit this proposed project is the more likely egress, taking Macaro to Roja, also an older neighborhood with tight streets, and then turning onto Redondo which means additional traffic either flows through another tight street and through a different school zone or turns left and heads to North River Road. This intersection is already experiencing gridlock during rush hour as it must funnel all buses and transit station traffic, spouses from Camp Pendleton who work anywhere to the south and all the local neighborhood traffic already existing. During a fire or other emergency this would be a frightening and dangerous bottleneck area already.

A development in this area should reflect the type of housing surrounding it. This is not the place to put high density housing, there is plenty of that going up on Oceanside Blvd. were the roads can facilitate the additional traffic.

I hope you will consider that this project will negatively impact this area and the city should consider a project that has a better fit, not just a project that earns the hugest profit for some developer. If they want to rework this plan for single family homes it would be a little easier to absorb the impact of additional vehicles in the area but this is the wrong answer to getting this property off the books.

Thanks for your consideration,

Shelley Payton

1 - Introduction

1.1. Project Overview

The Pacifica Planned Development Plan provides the City of Oceanside a comprehensive planning tool to help guide the orderly development of the new planned residential community at the former Pacifica Elementary School site. Located west of N River Road, the 14.55-acre Planned Development, hereafter also noted as "planning area," is conveniently situated approximately 0.5 mile from the San Luis Rey Transit Center, which provides connections to Camp Pendleton and SPRINTER rail services, as well as local bus transit within northeast Oceanside. The proposed project consists of a for-sale 164-unit Planned Development Community to be developed on a 14.55 acre site located at the former Pacifica Elementary School site at 4991 Macario Drive. The neighborhood will consist of three-story attached townhomes oriented towards internal paseos and drives throughout the site. New homes will range in size from a minimum of approximately 1200 square feet to 1800 square feet with two (2) to four (4) bedrooms and an attached 2-car garage (either side-by-side or tandem configuration). Each home will include private open space in the form of a patio and/or deck. Common recreational spaces, consisting of approximately 59,460 square feet of open space, will be designed with urban-style amenities such as tot lots, an off-leash dog space, pickle ball courts, bocce ball areas, barbecue areas, and space for a variety of outdoor games. The new community will blend into the surrounding neighborhood by keeping the existing slopes along the internal property lines as well as remaining open without gates at the main entry drive into the site. Architectural and landscape styles will reflect the traditional neighborhood. Buildings will be designed to engage and enhance an interconnected series of landscaped pathways and sidewalks along internal drives out to the surrounding streets to support convenient, safe, and efficient pedestrian movements that promote walkability and transit use.

1.2. Location and Context

The Pacifica Planned Development Plan planning area encompasses approximately 14.55 gross acres. As illustrated in Figure 1.1. Regional Vicinity Map, the planning area is situated in the northeast portion of the City of Oceanside in the North Valley neighborhood. The planning area is located approximately 0.5 mile from the San Luis Rey Transit Center and 1.5 miles from Highway 76.

As shown in Figure 1.2. Local Vicinity Map and Surrounding Uses, the planning area is situated on the southwest corner of Macario Drive and Monica Circle. Existing single-family neighborhoods are located north, south, east, and west of the site while existing slopes and wetlands habitat

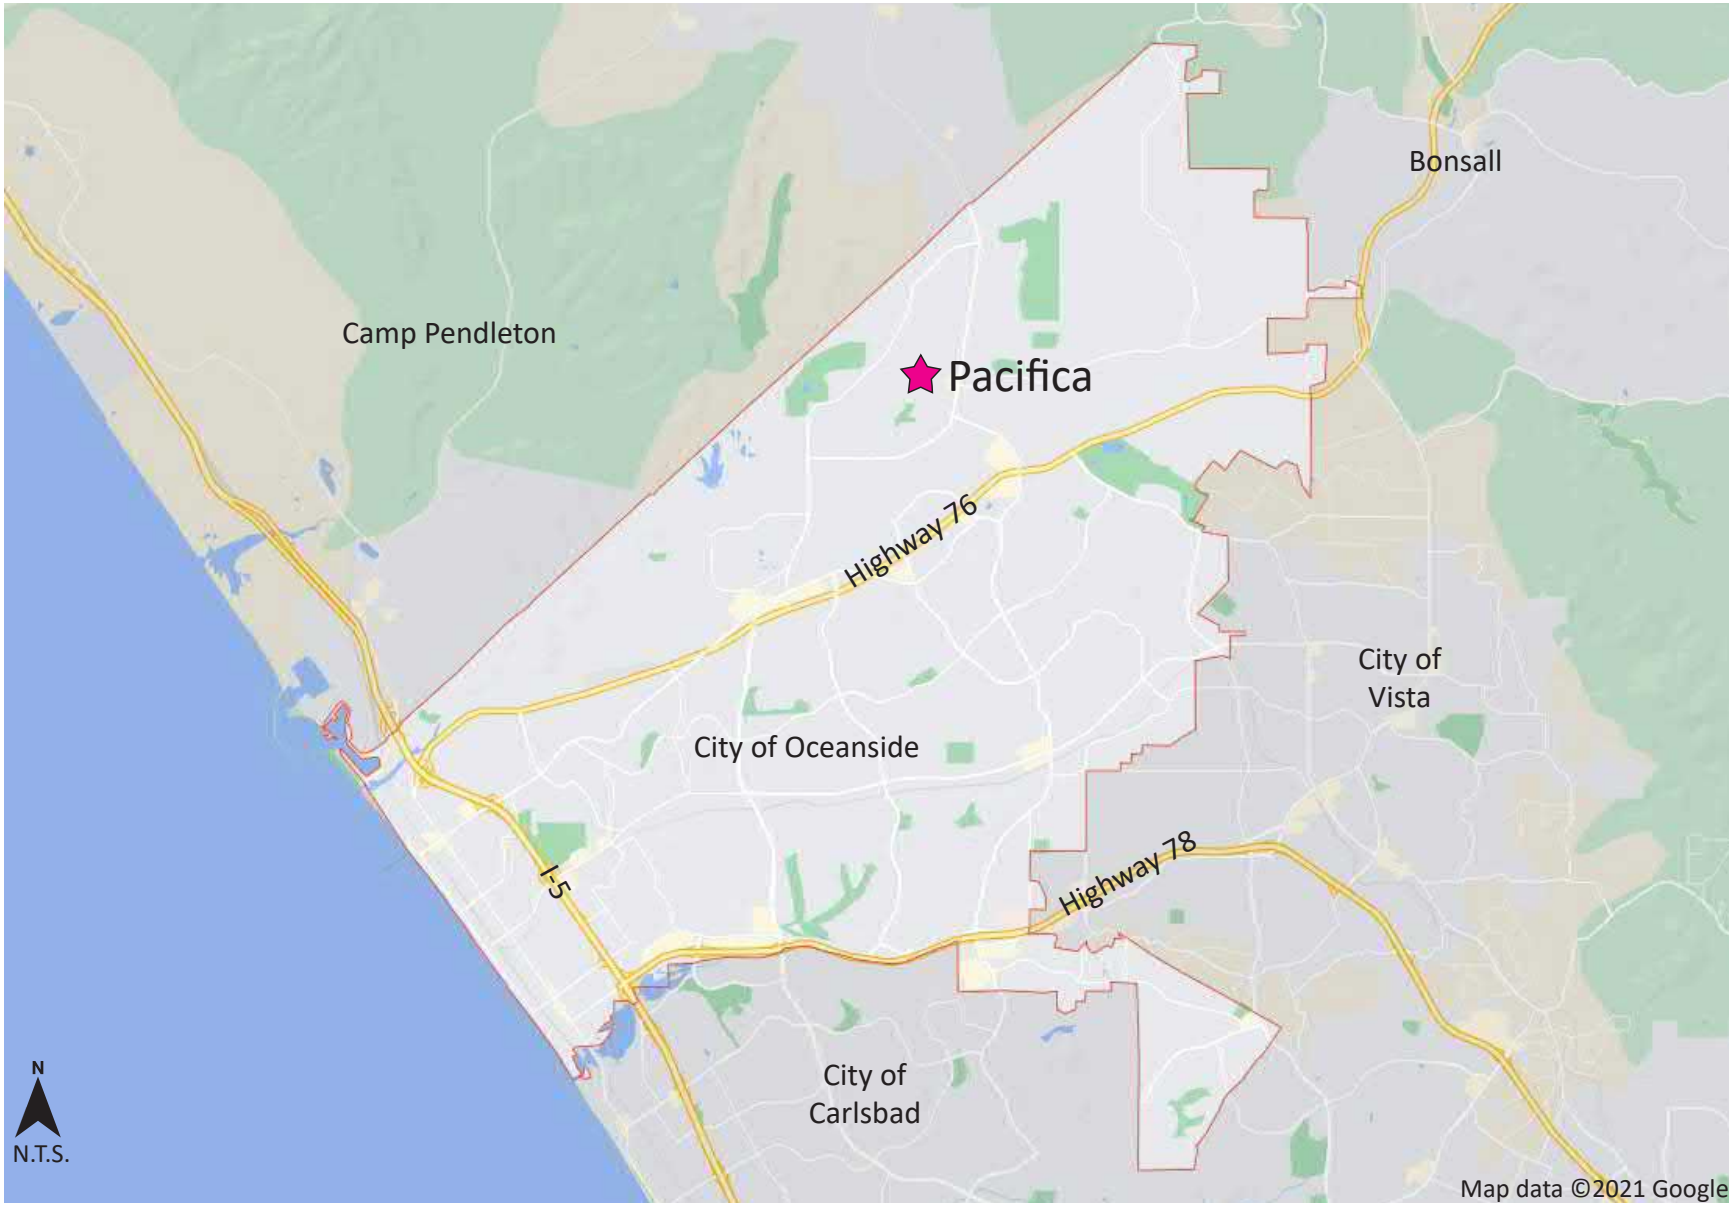

Figure 1.1. Regional Vicinity Map

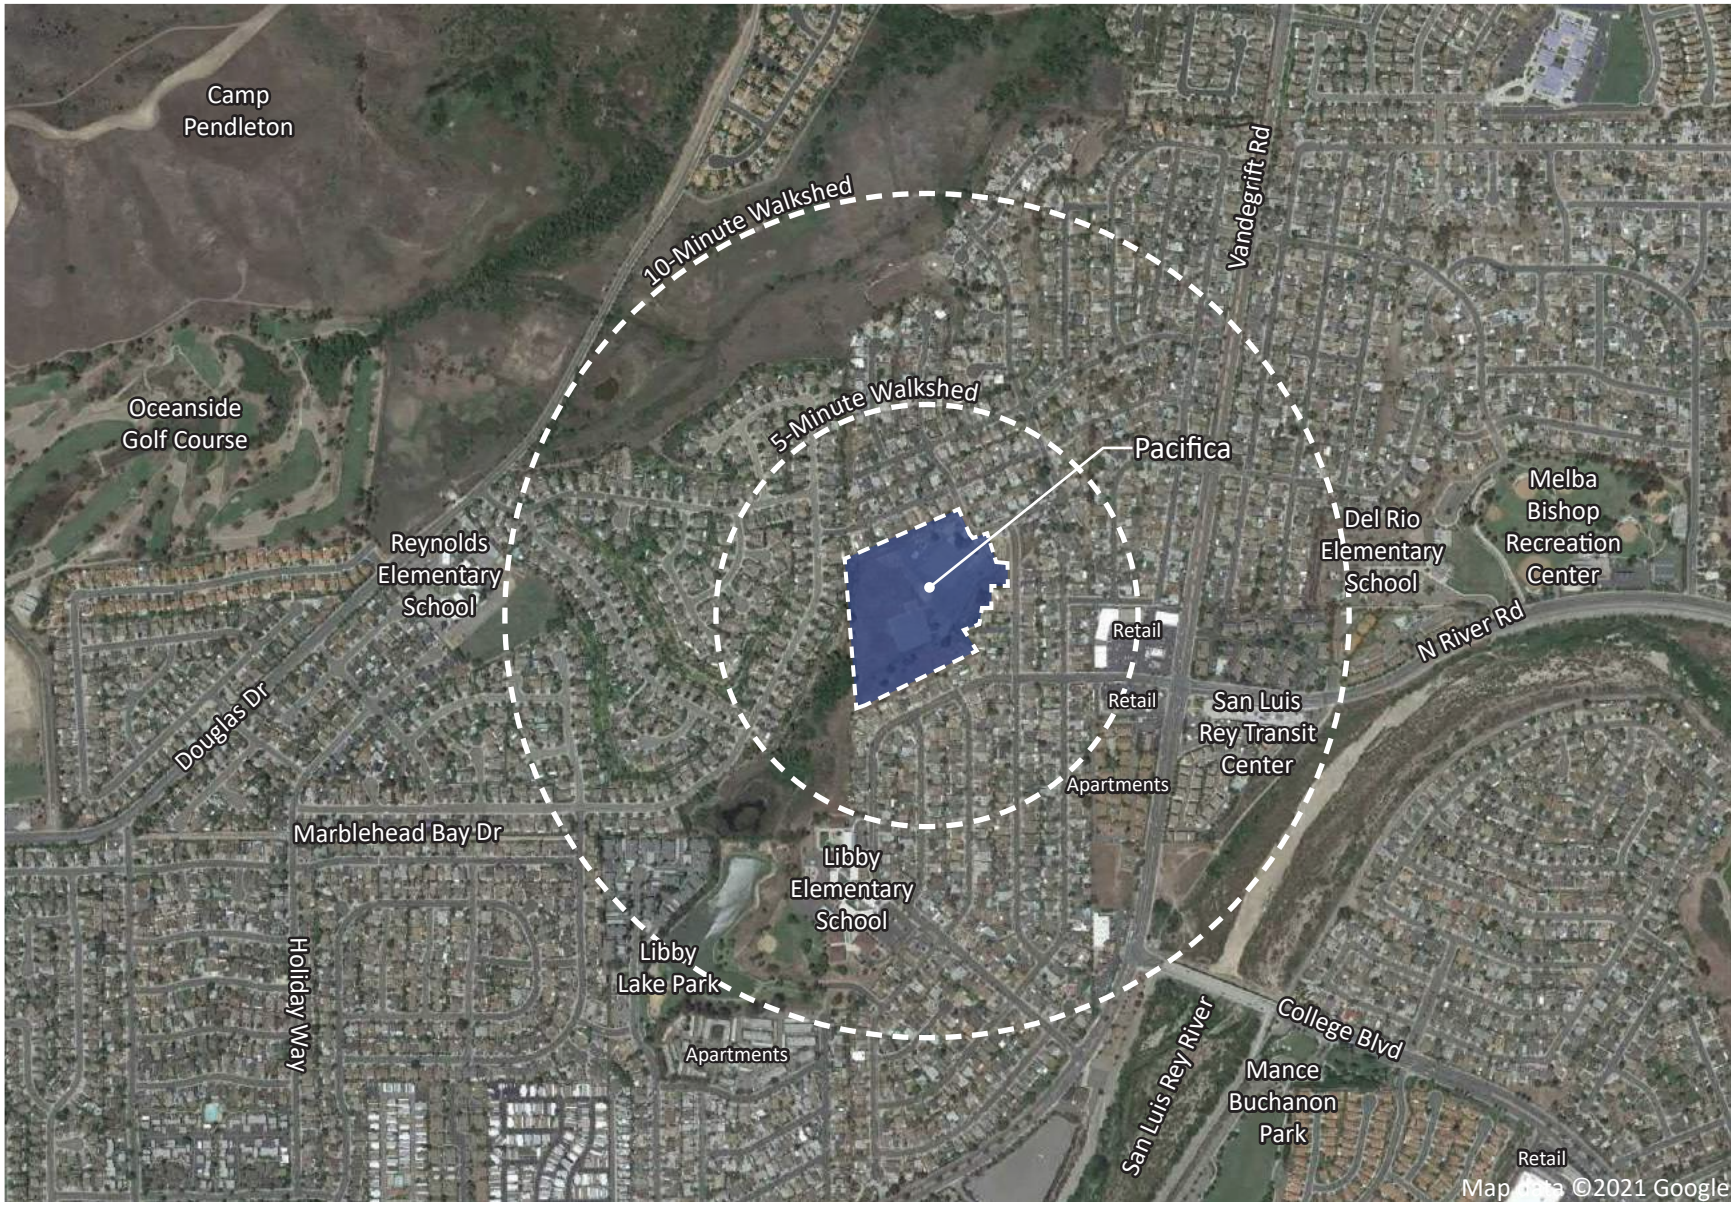

Figure 1.2. Local Vicinity and Surrounding Uses Map

leading to Libby Lake Park lie southwest of the site. To the east along River Road is a small area of neighborhood commercial with a gas station and primarily food uses within walking distance of the site. Less than 1 mile across the San Luis Rey River is Mance Buchanon Park which provides biking and walking trail access west to the beach.

As illustrated in Figure 1.3. Existing Conditions and shown in Figure 1.4. Existing Site Photographs, the planning area includes three (3) parcels (Assessor Parcel Numbers 122-190-19, 122-190-22, and 157-070-42) located at the intersection of Macario Drive and Monica Circle. From the intersection, the site is generally flat with no structures and minimal vegetation of grasses, small shrubs, and a few trees. The edge of the parcels are bounded by approximately 20' - 30' slopes up to existing single family homes on the north, south, east, and west. In the southwest corner of the planning area, existing wetlands habitat runs from the site towards Libby Lake Park. Easements for storm drain and sewer facilities cut through the site from west to east and tie into an existing sewer lift station located within the property along the Macario Drive frontage.

All streets immediately surrounding the site are local residential streets improved with sidewalks to serve the existing neighborhood. The planning area will have two (2) points of access into the site. The primary access with be from a private drive at the corner of Monica Circle and Macario Drive. The southeast corner of the site ties into the existing dead end of Malaga Drive which will be extending into the site as an emergency vehicle access with gates limiting access to the planning area.

1.3. Regulatory Setting and Site History

Prior to the adoption of this Planned Development Plan, the Project area was the former site of the Pacifica Elementary School. Built in 1972, the school closed in 2002 after the buildings were found to be unsafe to withstand an earthquake. Students continued attending classes in portable trailer buildings here until 2007 when the students were absorbed into nearby schools. In 2019, the Oceanside Unified School District identified the property as a surplus site and the Facilities Advisory Committee began the process to determine the disposition of the site.

Given the site's history as an elementary school, the property has a existing designation of Civic Institution in the City's General Plan Land Use Map. Similarly, the existing zoning designation is Civic/Public; see Figure 1.5. Existing Land Use and Zoning Maps. Concurrent with the Planned Development Plan, a General Plan Amendment and Zone Change application were processed to redesignate the Property to Medium Density Residential - B and Planned Development respectively, thereby allowing for the development of the townhome community proposed herein. See Figure 1.6. Proposed Land Use and Zoning Maps.

1.4. Purpose of the Planned Development District

The Planned Development (PD) Plan is intended to establish the zoning, use regulations, and development regulations for future development of the site. The PD Plan has been prepared in accordance with the City of Oceanside Zoning Ordinance - Article 17, which outlines the requirements for a Planned Development District. As stated in Section 1701 of the Zoning Ordinance, the specific purposes of the PD Planned Development District are to:

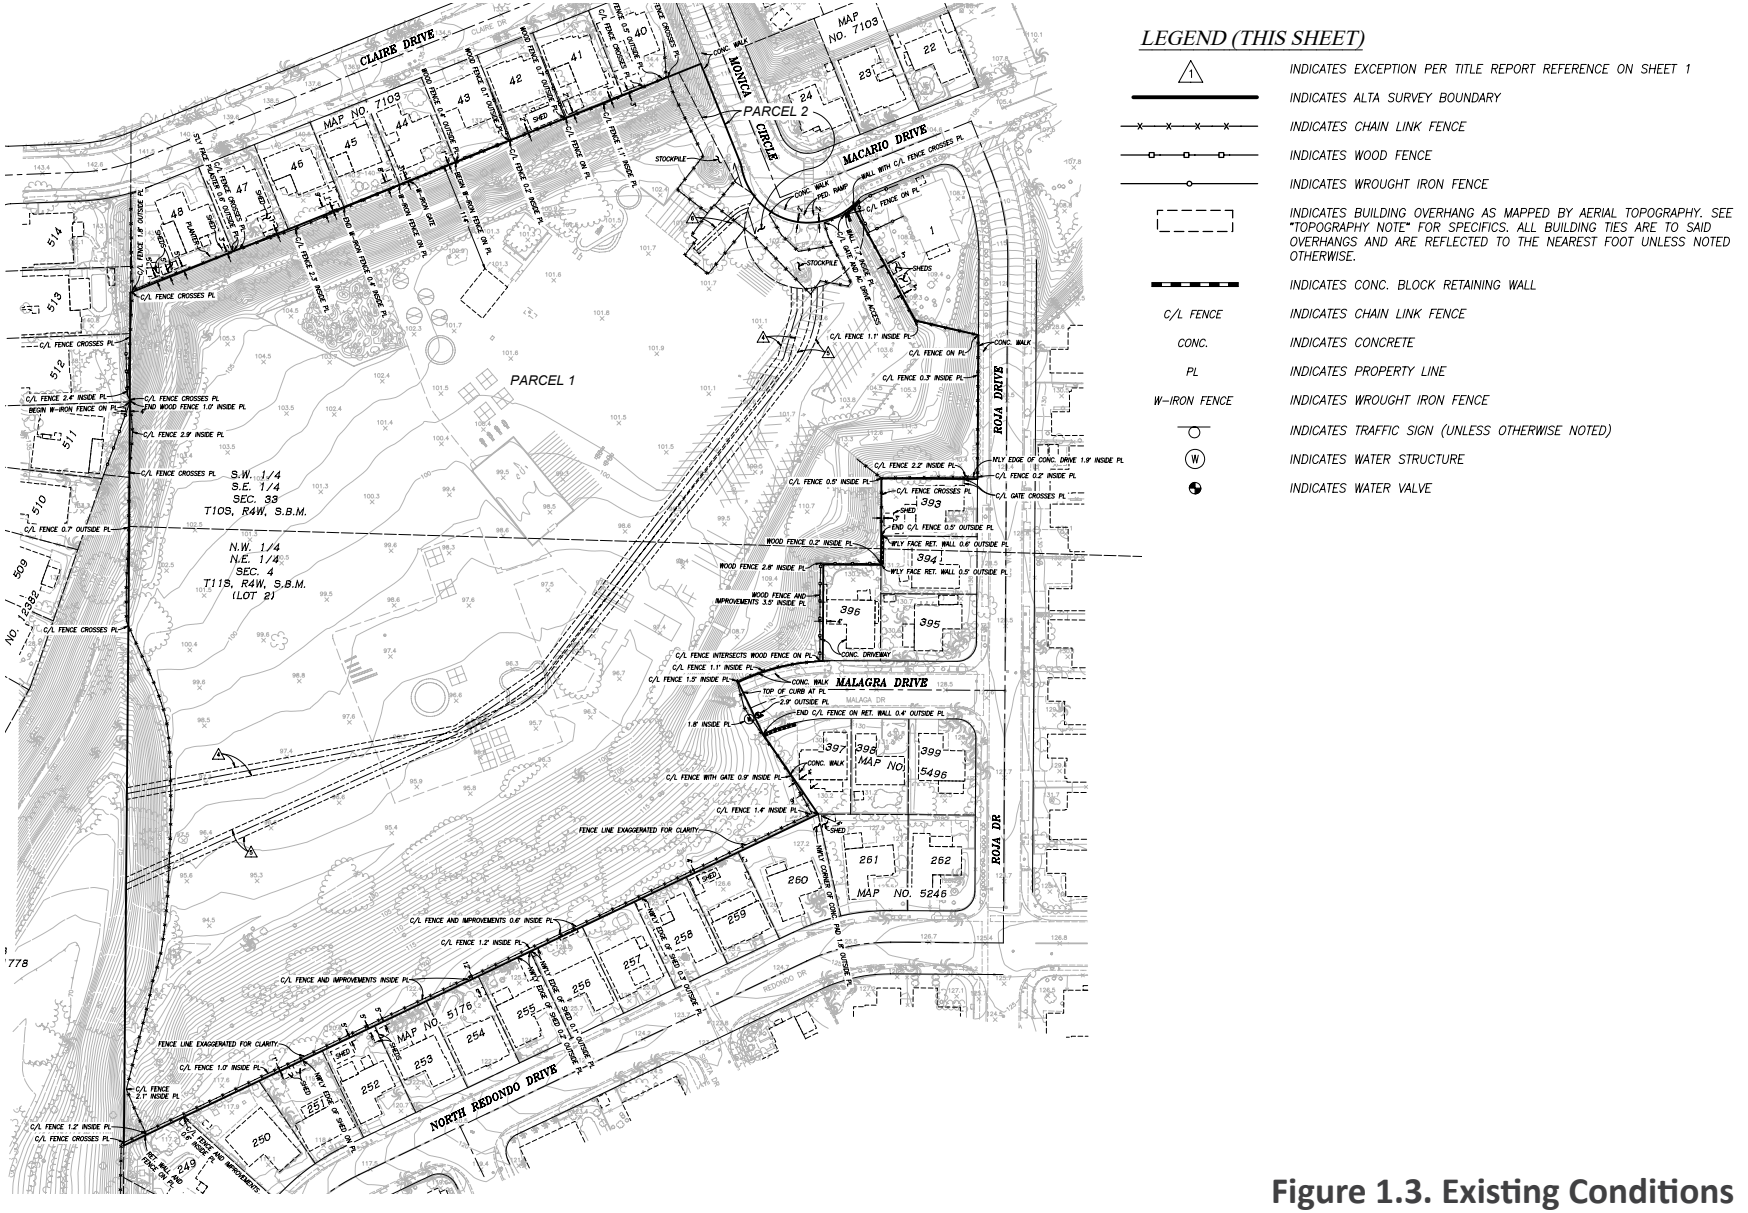

Figure 1.3. Existing Conditions

View west on Malaga Dr.

View south on Monica Cir.

View into the site from Malaga Dr.

View into the site from Macario Dr. and Monica Cir.

Figure 1.4. Existing Site Photographs

1. Establish a procedure for the development of parcels of land in order to reduce or eliminate the rigidity, delays, and inequities that otherwise would result from application of zoning standards and procedures designed primarily for small parcels.

2. Ensure orderly and thorough planning and review procedures that will result in quality urban design.

3. Encourage variety and avoid monotony in large developments by allowing greater freedom in selecting the means to provide access, light, open space, and amenity.

4. Provide a mechanism whereby the City may authorize desirable developments consistent with the General Plan without inviting speculative rezoning applications, which, if granted, often could deprive other owners of development opportunities without resulting in construction of the proposed facilities.

5. Encourage allocation and improvement of common open space in residential areas, and provide for maintenance of the open space at the expense of those who will directly benefit from it.

6. Encourage the preservation of serviceable existing structures of historic value or artistic merit by providing the opportunity to use them imaginatively for purposes other than that for which they were originally intended.

7. Encourage the assembly of properties that might otherwise be developed in unrelated increments to the detriment of surrounding neighborhoods.

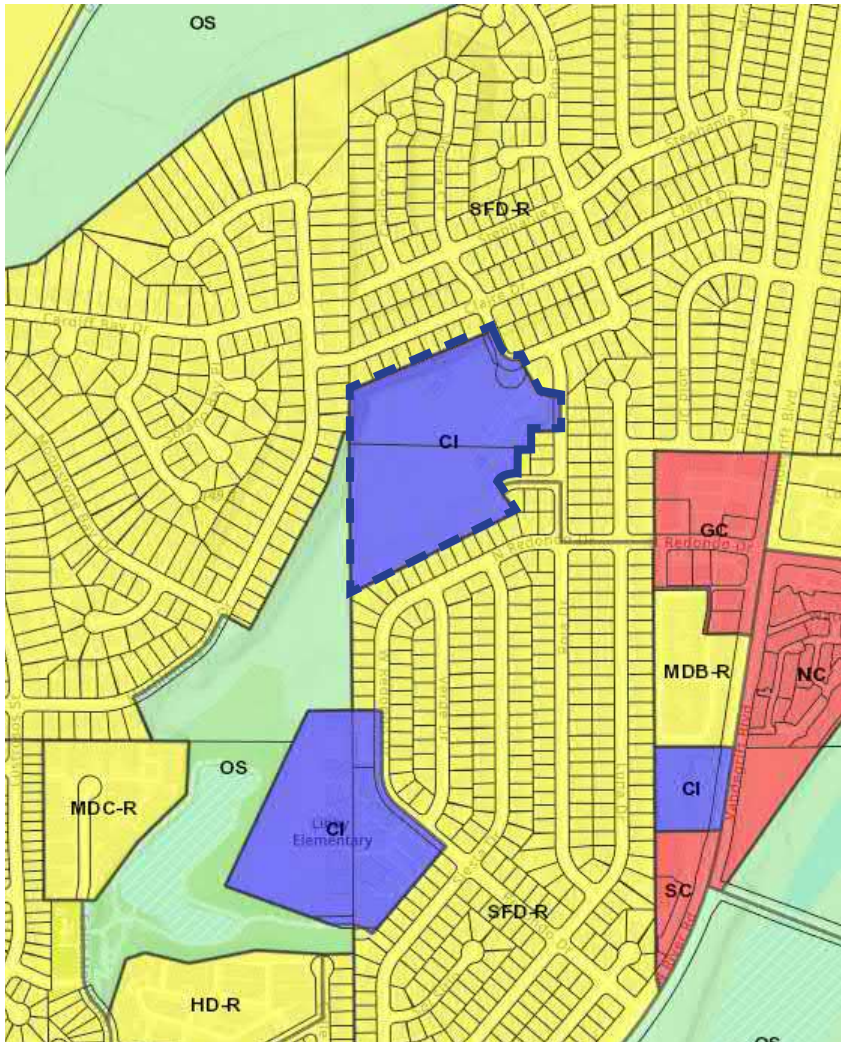
Planned developments are utilized to allow for the creative design and development of parcels that require more flexibility in design than would be possible through the strict application of zoning regulations found in the Zoning Ordinance. This PD Plan serves as the development guide for the property. The document provides direction for the assignment of land uses, development intensities, development regulation, as well as design guidelines that will provide a framework for the specific development of the planning area.

1.5. Discretionary Applications

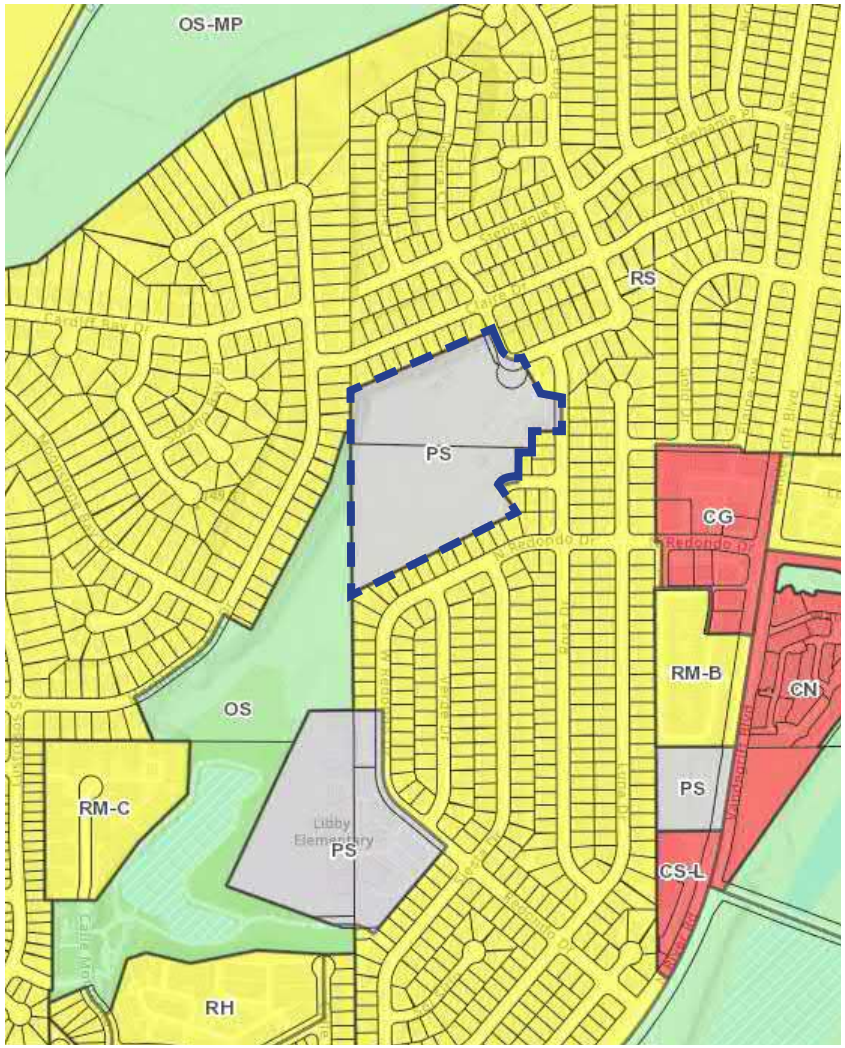
To support development of the Pacifica Planned Development Plan, the project consists of the land use applications summarized below. The proposed development components are described in more detail in Chapter 2 - Site Design and Chapter 3 - Architectural Design. Consistency with the City of Oceanside's policy documents is provided in Chapter 4 - General Plan and Zoning Consistency.

1.5.1. General Plan Amendment

As mentioned previously, the current General Plan land use designation for the planning area is Civic Institution (CI). This designation does not allow for residential uses as it is intended for public and quasi-public uses and facilities. The change in general plan land use to Medium Density Residential - B (MDB-R) will allow for housing to be developed on the site at an appropriate scale for the area and size of parcel.

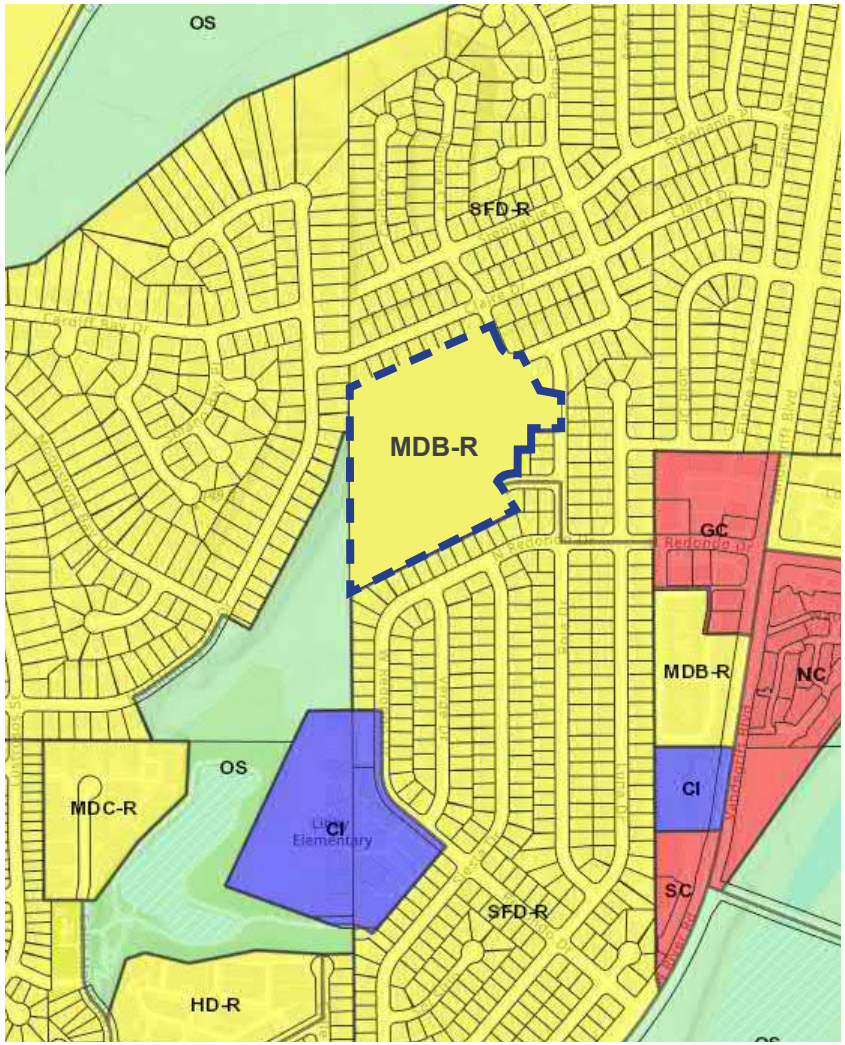


Land Use

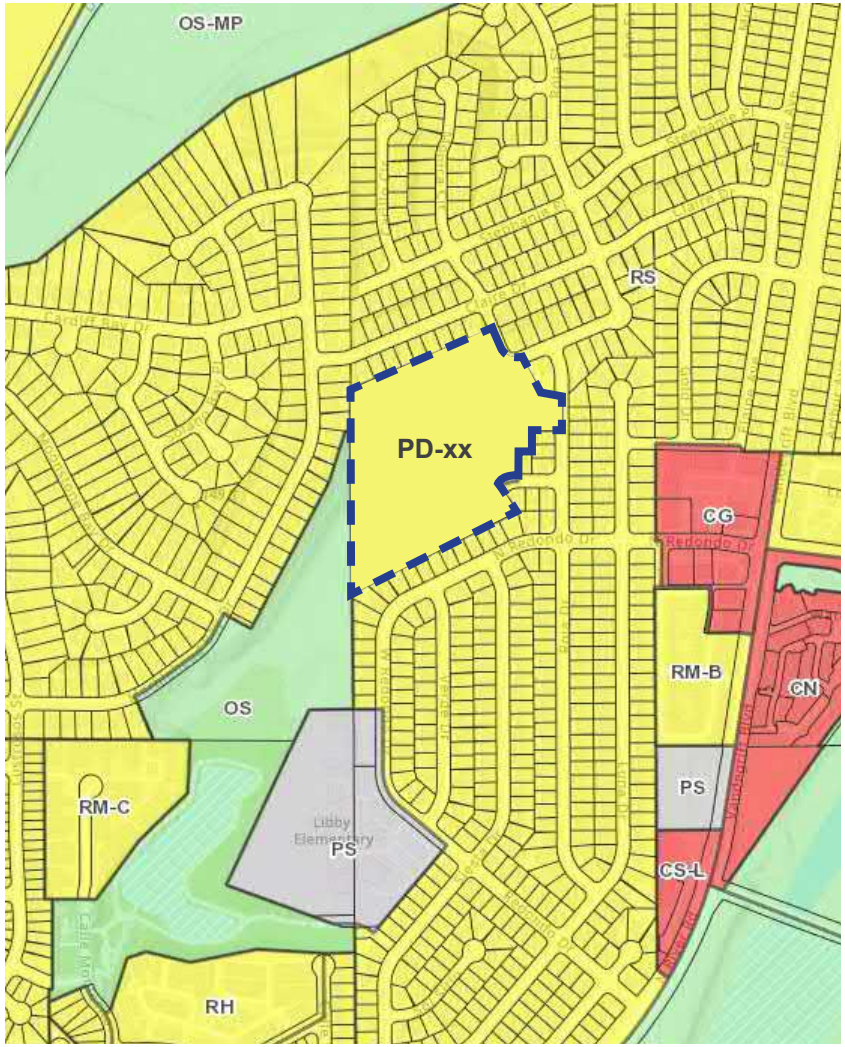


Zoning

Figure 1.5. Existing Land Use and Zoning Maps



Land Use



Zoning

Figure 1.6. Proposed Land Use and Zoning Maps

1.5.2. Zoning Amendment

Currently, the entire property is designation as Civic/Public (PS). A Zone Amendment is proposed that will designate the entire property as Planned Development (PD) with the Pacifica Planned Development Plan serving as the regulating document.

1.5.3. Tentative Map

A Tentative Map (TM) is proposed that will present specific lot configurations for the Pacifica community. It is anticipated that Pacifica will be one lot that is developed in a single phase.

1.5.4. Development Plan

A Development Plan is required for site plan approval pursuant to Article 43 of the City's Zoning Code to ensure that new development complies with all applicable requirements of the Zoning Code. The Development Plan is proposed in conjunction with the PD Plan and presents the proposed site layout and project architecture along with additional information related to aesthetics, building orientation, landscaping and open space, and infrastructure. The Development Plan corresponds to the Tentative Map presenting the proposed building locations and conceptual grading elements of the project.

2 - Site Design

2.1. Goals and Concepts

The Planned Development provides a tool for comprehensive and creative planning strategies that respond to the unique conditions of the site, market conditions, and context while implementing the goals and policies of the City's General Plan Land Use Element, Zoning Ordinance, and Subdivision Ordinance. The following goals have been crafted to guide development that is consistent with these documents:

1. Support the housing needs of the City of Oceanside by developing high-quality, workforce housing that balances density with price-points and long term maintenance costs, such that new homes remain financially attainable to entry-level home buyers.
2. Maximize residential densities, to the extent feasible, within proximity to transit, education facilities, commercial uses, and trails to reduce reliance on automobiles and potentially minimize greenhouse gas (GHG) emissions.
3. Show sensitivity to adjacent properties, open space, and community amenity areas with appropriate setbacks and orientation of buildings and facades.
4. Design the community using compatible architectural styles to the existing neighborhood with a scale and treatment that improve on the visual image of the surrounding area.
5. Create a highly connected and efficient system of sidewalks and pathways layered with a vehicular circulation system that adequately accommodates traffic and minimizes impacts to the existing neighborhood.
6. Provide well designed common open space areas that are connected throughout the Project site while utilizing current water and energy conservation practices.
7. Preserve natural open space that provides wildlife habitat or other natural resources.

Primary Community Entry
- New driveway location for better line of sight and visibility to traffic on Monica Cir. and Macario Dr.
- No gate
- Publicly accessible pocket park
- To be enhanced with decorative paving, landscaping and community signage

Existing Slope
- Provides approximately 30 feet of elevation difference between existing homes and new homes below.

Typical Three-Story Townhome Building
- 4 building types
- 2 elevation styles
- 3 floor plan variation
- Maximum height of 38.0 feet
- Oriented to provide front doors along streetscapes and paseos

Amenity Area A
- 10,126 SF
- Minimum dimension of 20 feet
- See Amenity Plan for details

Amenity Area B
- 22,944 SF
- Dog park and fire pits for community gathering (Please see Amenity Plan)

Central Paseo
- 6,121 SF
- Provides a central spine trail that connects amenity areas to promote walkability
- Enhanced with landscaping and special paving at crosswalks

Basin and Habitat Setback
- Stormwater basin for hydromodification and water quality treatment
- Habitat and planning setbacks to protect adjacent existing wetlands

Amenity Area C
- 10,336 SF
- Pickle Ball Courts, Barbecue area, open lawn for games and unstructured play (Please see Amenity Plan)

Secondary Access
- Emergency Vehicle Access Only
- Gated at the existing terminus of Malaga Drive

Project Summary

Property Size (Gross): 14.55 Acres

Developable Area (Net)[1]: 12.82 Acres

Development Pad Area: 10.23 Acres

No. of Units: 164 Three-Story Townhomes[2]
- (14) Plan 2532: 1210 SF, 2 bed., 2.5 baths, 2-car gar.
- (76) Plan 1633: 1497 SF, 3 bed., 2.5 baths, 2-car gar.
- (74) Plan 1636: 1791 SF, 4 bed., 4 baths, 2-car gar.

Density[3]: 12.8 du/ac

Proposed Setbacks:
- Front (To Monica/Macario Dr): 15' to building / 12' to patio
- Side (N and S Bndy): 74' Minimum
- Rear (W Bndy): 69' Minimum

Parking Required:
- Resident: 2 Spaces per Unit (1 covered)
- Guest Spaces: 1 + 20% of total units (34 spaces)

Parking Provided:
- Resident: Private 2-car garage per unit
- Guest Spaces[10]: 61 spaces

Open Space Required:
- Total: 300 SF per Unit x 164 = 49,200 SF
- Private Open Space minimum dimension of 5 feet
- At least 50% shall be Common = 24,600 SF
- At least two common area shall be 4,000 SF Min (or one at 8,000 SF Min); Minimum dimension of 20 feet

Open Space Provided:
- Total: 83,410 SF (508 SF per unit)
- Private OS (5' min): 23,950 SF
- Common Open Space (20' min; 8000 SF Min): 59,460 SF

Bldg Coverage: 3.23 AC. (22.2%)

Notes:
1. Excludes slopes surrounding the site in accordance with Section 3039 of the City of Oceanside Zoning Ordinance.
2. Type VB construction with NFPA 13D automatic sprinkler system.
3. Density based on Development Area.
4. Inclusionary housing requirement to be met through payment of in-lieu fee.
5. Existing General Plan/Zoning: CI/PS
6. Proposed General Plan: Medium Density B (10-15 du/ac)
7. Proposed Zoning: Planned Development
8. Coastal Zone: No
9. Assessor's Parcel Numbers: 157-070-42-00, 122-190-19-00, and 122-190-22-00
10. Guest Parking Spaces are 16' x 8.5' with 2' overhang; Includes 3 ADA Spaces that are 18' x 9'

North

0 50 100

1" = 50'

Figure 2.1. Conceptual Site Plan

These design goals are achieved in the following ways and are illustrated in Figure 2.1. Conceptual Site Plan:

- High-quality architecture
- Well designed and located open space amenities throughout the project site.
- Vehicular and pedestrian connectivity throughout the site area that ties into the existing neighborhood connecting people to surrounding transit and destinations.
- Preservation of existing slopes to the best extent feasible while providing a large buffer to existing riparian habitat.

2.2 Development Standards

Table 2.1. Development Standards provides a list of development standards that are applicable to all new development within the Pacifica PD area. These standards include building setbacks, height limitations, open spaces requirements, and more.

Table 2.1. Development Standards

Use	Pacifica PD Standards	Additional Standards/Notes
Residential Dwelling Type	Multiple Family Dwellings, Multiple Unit Structures (MUS)	
Density and Intensity		
Min. Site Area/Unit (SF)	3,600 SF/unit	
Max. Site Area/Unit (SF)	2,500 SF/unit	
Min. Density (du/ac)	10.0 du/ac	Excluding slopes
Max. Density (du/ac)	15.0 du/ac	Excluding slopes
Min. Lot Area (SF)	7,500 SF	
Max. Building Height	40 FT or 3 stories	Whichever is less; as measured from the finished adjacent grade to the top of the tallest roof or architectural feature.
Building Setbacks		
Front Yard	15 feet to building, 12 feet to patio	Monica/Macario Dr.
Side Yard	5 FT min., 10 FT avg.	
Rear Yard	15 feet minimum	
Courts	One-half the height of the opposite wall but not less than 18 feet opposite a living room and 12 feet opposite a required window for any other habitable room.	Measured building to building
Private Drive Aisle (Alley)[1]	0 feet minimum	Measured from face of garage door

Use	Pacifica PD Standards	Additional Standards/Notes
Parking		
Garage	2 spaces per unit (including 1 covered); tandem garage parking is permitted	Please refer to Section 2.2.1.
Guest	1 space + 20% total number of units (34 spaces total)	Please refer to Section 2.2.1.
Vehicular Access	24-28 FT private drive	Please refer to Section 2.2.1.
Open Space		
Outdoor Living Area	300 SF/unit (combination of private and common)	Please refer to Section 2.2.2.
Walls and Fencing		Please Refer to Section 2.2.3.
Landscaping		Please Refer to Section 2.2.4.
Other		
Refuse and Recycling		Oceanside Municipal Code
Storage		Oceanside Municipal Code
1. Soffits, vine trellises, upper-story cantilevers, and utility closets may encroach up to 3 feet		

2.2.1. Parking and Private Roadway Standards and Regulations

The purpose of this section is to regulate the provision of off-street parking for all residential uses within the planning area. Parking standards have been developed in accordance with the City's Off-Street Parking Requirements.

A. General Requirements

1. Parking shall only be permitted in designated parking spaces and inside garages. No Parking shall be permitted in Private Drives, Private Drive Aisles, or driveways.

2. All circulation, ingress and egress, and off-street parking areas shall be surfaced with an asphalt or cement concrete paving, designed to withstand repeated vehicular traffic. Other paving material may be used, such as pervious surfaces, subject to the approval of the Director and/or City Engineer.

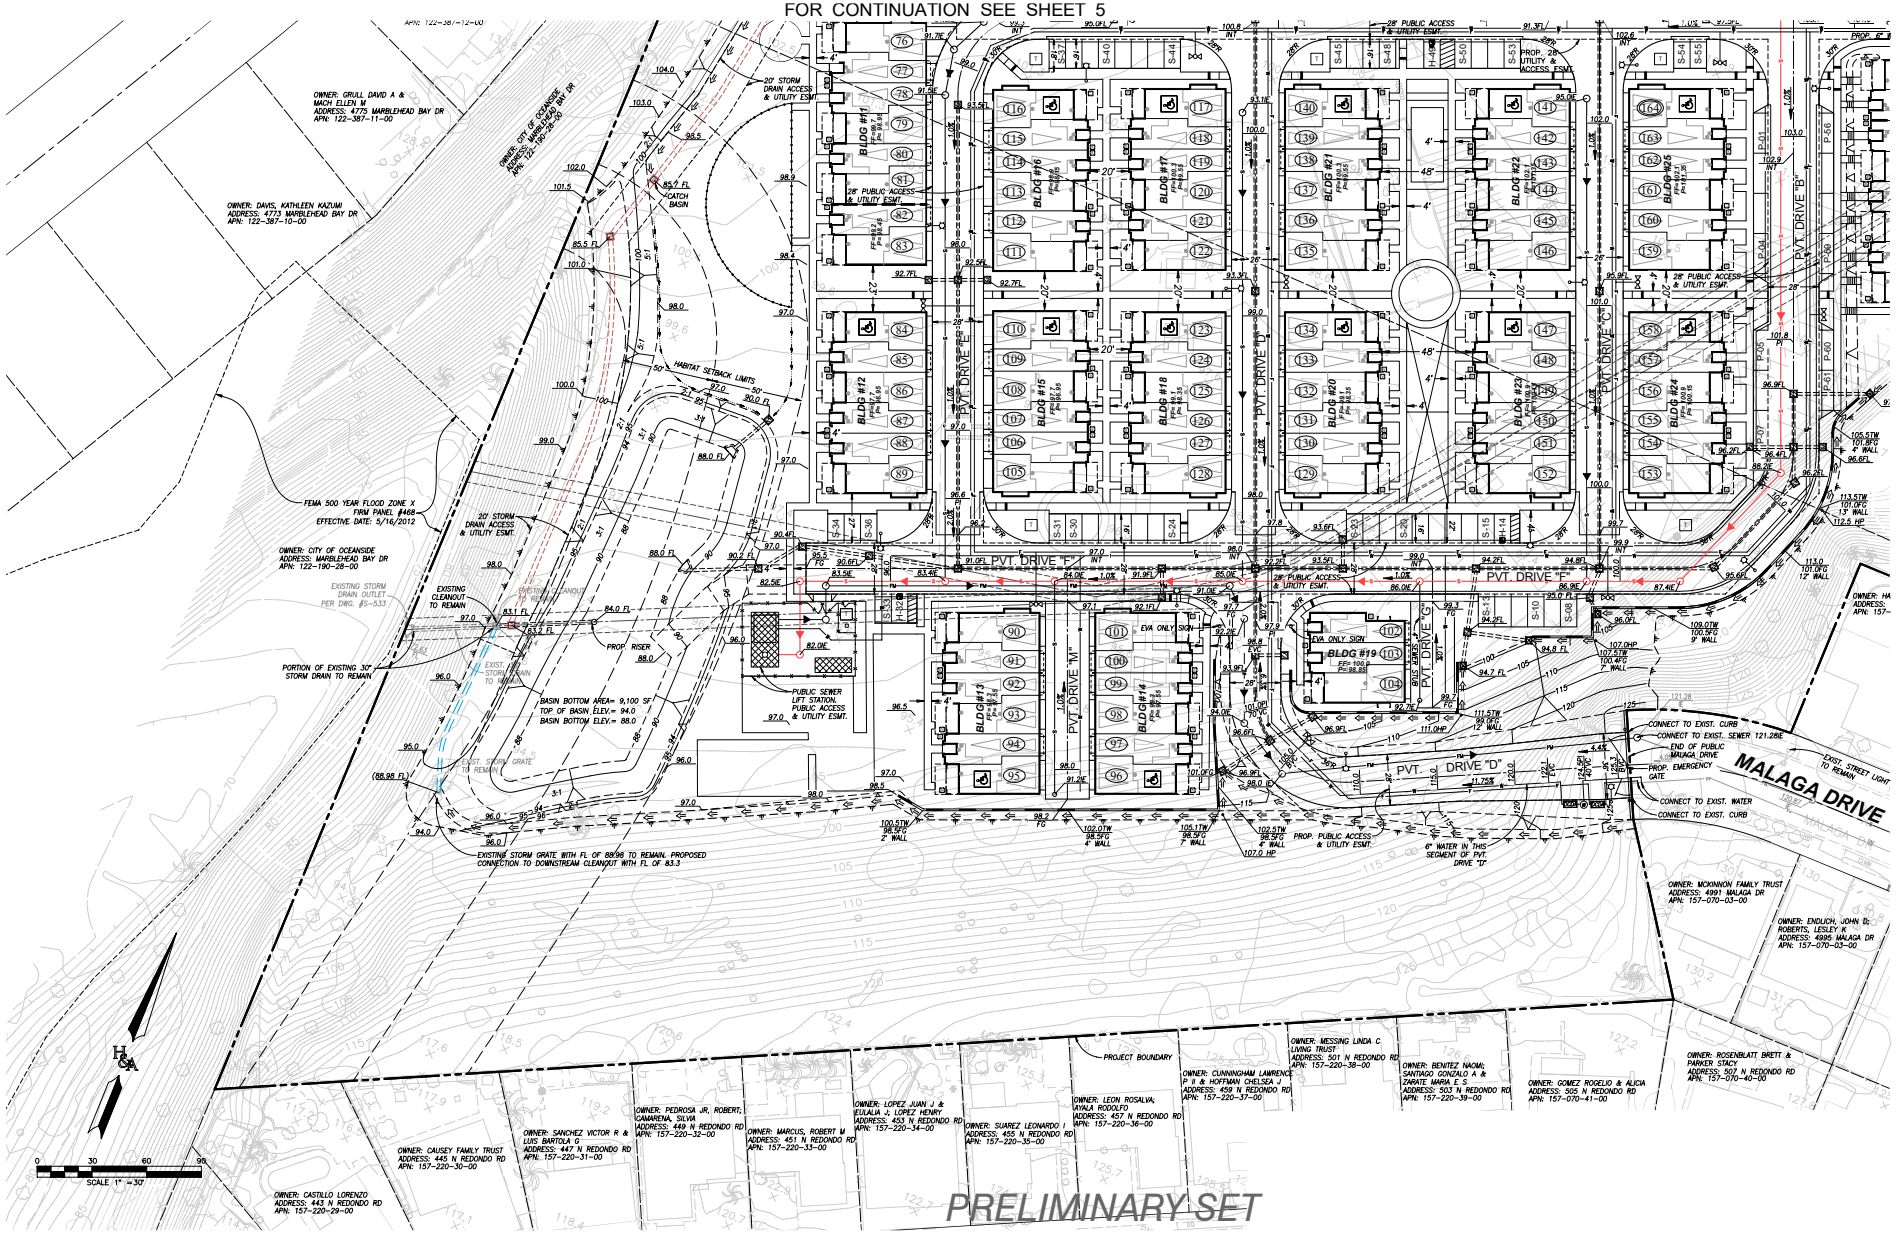


Figure 2.2.1 Tentative Map

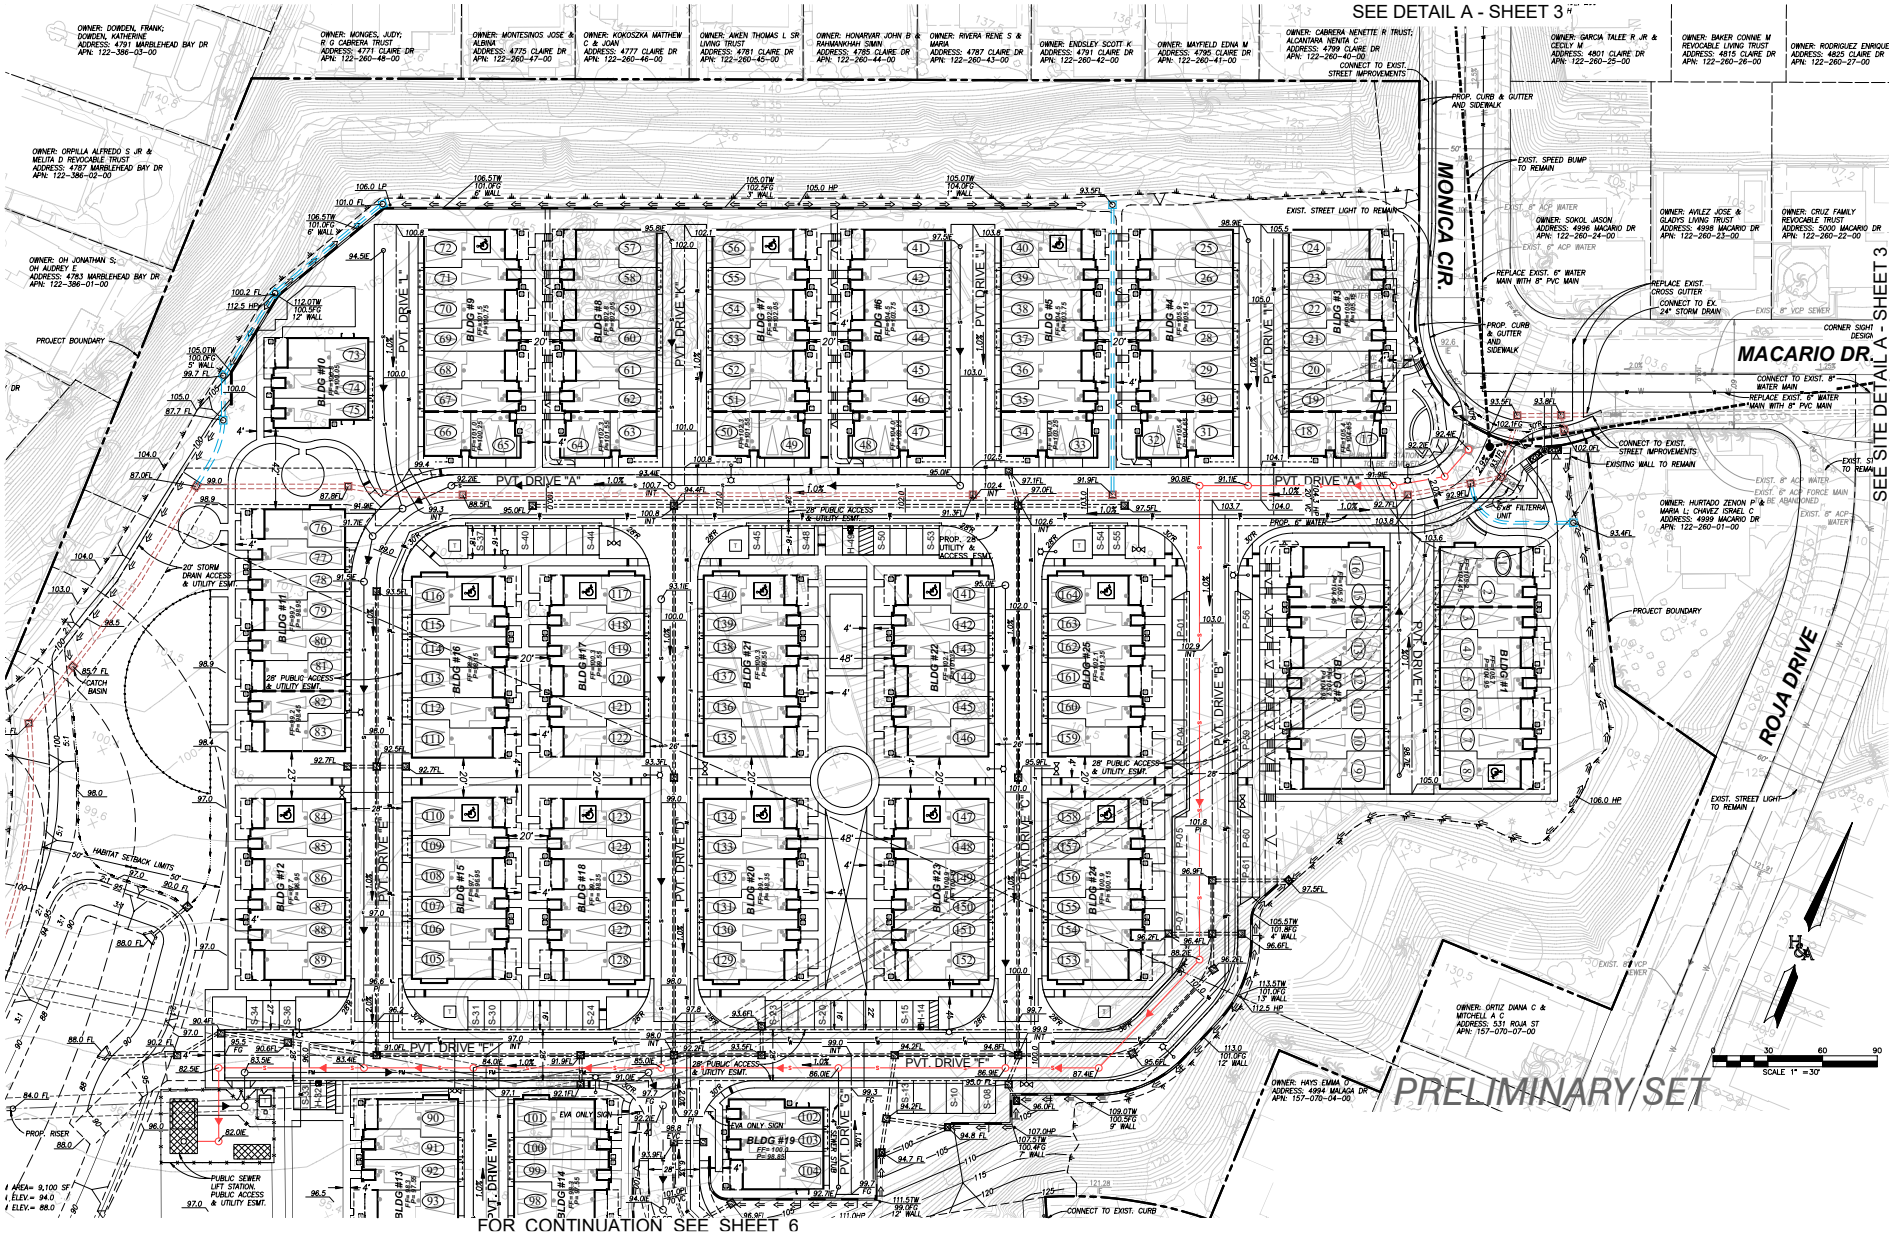


HUNSAKER & ASSOCIATES SAN DIEGO, INC.

Figure 2.2.2 Tentative Map

3. All guest parking spaces, Private Drives, Private Drive Aisles, pedestrian crossings, driveways and fire lanes shall be striped or otherwise designated to provide safe access and circulation. Pavement markings, signage, and other distinctions shall be maintained in a visible and legible manner.

B. Garages

The following standards shall apply to all private residential garages within the planning area:

1. Garages shall provide a minimum of two (2) parking spaces. Spaces may be provided in either side-by-side or tandem configurations.
2. Each interior garage parking space shall maintain an unobstructed dimension of 20 feet long and 10 feet wide with a minimal vertical clearance of seven (7) feet, except the front three (3) feet of a parking space located at the front of the garage may have a vertical clearance of four (4) feet.
3. Garages shall be designed to provide adequate storage for three (3) waste carts. Waste carts storage space shall not encroach into the required parking space area.
4. Garage spaces shall be used for parking and not storage, which shall be enforced through the Community's Covenants, Conditions, & Restrictions (CC&Rs)

C. Guest Parking

The following standards shall apply to all guest parking within the planning area:

1. Guest parking shall be provided at a rate of 1 space + 20% of the total number of homes for a total of 34 spaces required on site.
2. Parking Space dimensions shall be provided as follows:
   a. Perpendicular guest parking spaces shall have a minimum dimension of eight and a half (8.5) feet wide by eighteen (18) feet long. The paved parking space length may be decreased by up to two (2) feet by providing an equivalent vehicle overhang into landscape areas or paved walkways. Such overhang area shall not be considered as part of any open space requirement. In no case shall such overhang be considered part of a required walkway or sidewalk width.
   b. Parallel guest spaces shall provide a minimum dimension of eight (8) feet wide by twenty-two (22) feet long.
3. Guest parking spaces shall be evenly distributed throughout the planning area, designed to occur along Private Drives, or divided into small landscaped parking courts to avoid the creation of large parking lots.

4. Guest parking spaces shall be solely used for parking, not for storage; display for sale or lease; or repair of vehicles, trailers, recreation vehicles, boats, or similar. It shall be unlawful for any person to park or store an automotive vehicle or trailer without current registration from the Department of Motor Vehicles or in inoperable condition.

5. Guest parking spaces and associated driveways, maneuvering areas, and landscaping shall be maintained free of vandalism and litter. Striping, paving, walls, lights, and all other facilities shall be maintained in good condition.

6. Designated parking spaces for the disabled shall be provided in compliance with state law (Title 24) and the California Vehicle Code (Section 22507.8), including required number of parking spaces and design requirements.

D. Electric Vehicle Parking and Charging

The following standards implement Section 3048 of the Oceanside Municipal Code and Measure TL-2 of the Climate Action Plan to support and promote the use of electric vehicles:

1. A minimum of one guest space shall be equipped with an EV charging station or as otherwise required by CalGreen, whichever is more stringent. Calculations for the required number of spaces shall be rounded up to the nearest whole number.

2. Garages shall be equipped with one 240-volt/16-ampere electric outlet to accommodate “Level 2” electric vehicle charging.

3. Charging stations/spaces shall be posted with signage indicating the space is only for electric vehicle charging purposes. Days and hours of operations shall be included if time limits or tow away provisions are to be enforced by the owner. Information identifying voltage and amperage levels or safety information must be posted.

4. Charging stations/spaces shall not interfere with on-site parking or pedestrian circulation.

5. Charging stations/spaces shall be maintained in functioning order in all respects.

2.2.2. Open Space

In accordance with the Oceanside Municipal Code, new multi-family residential developments are required to provide both Private and Common Open Space totaling a minimum of 300 SF per home. See Figure 2.3.1. and 2.3.2. Conceptual Landscape Plan:

A. Private Open Space

Private open space is defined as open space areas intended for the private use of individual dwelling units. Private Open Space areas shall be subject to the following requirements:

1. Private open space shall be directly accessible from the interior living space of the unit it is intended to serve.
2. Private open spaces shall be located on the same floor as the primary living area to maximize usability.
3. Private open space shall not be used for storage.
4. Private open space shall have a minimum dimension of five (5) feet.

B. Common Open Space

Common open space areas are commonly owed for the benefit of all planning area residents and their guests. The following standards shall apply to all common open space areas to ensure that adequate landscaping and amenities are provided to support a high quality of life.

1. At least fifty percent (50%) of the total usable open space requirement shall be provided as usable common open space.
2. Parking areas, private roads and driveways, private open space areas, front or street side yards, and areas with slope exceeding ten percent (10%) shall not be considered usable open space.
3. Walkways and bike paths may be used in the calculation of common open space.
4. Common usable open space shall be designed so it has no dimension less than twenty (20) feet, is at least 1,000 SF in size, and is open to the sky.

5. At least two common active recreation areas shall have a minimum size of 4,000 SF or a single, common active recreation area with a minimum size of 8,000 SF may be provided if the area is centrally located and easily accessible from all unit within the project. (1) children's play area shall be provided within a common open space area. Possible amenities for the Project include:

   a. Pickleball Courts

   b. Open lawn area for passive and active recreation activities

   c. Picnic space(s) with gas barbecue/outdoor kitchen

   d. Off-leash pet area/dog park

   e. Passive seating areas with fire pit

   f. Bocce Ball Courts

   g. Children's play area or tot lot

   h. Other appropriate uses as approved by the Director

6. Recreational amenities shall be located and/or designed to minimize noise and visual conflicts from adjacent properties.

7. Amenities shall be distributed throughout the site and should be selected to cater to diverse range of interests and lifestyles including pet owners, young families, singles and more. Spaces should be provided that offer opportunities to play, socialize, exercise, and/or relax. See Figure 2.4. Conceptual Pickleball Courts and Dog Park Areas and Figure 2.5. Conceptual Central Paseo and Courtyard Areas for details.

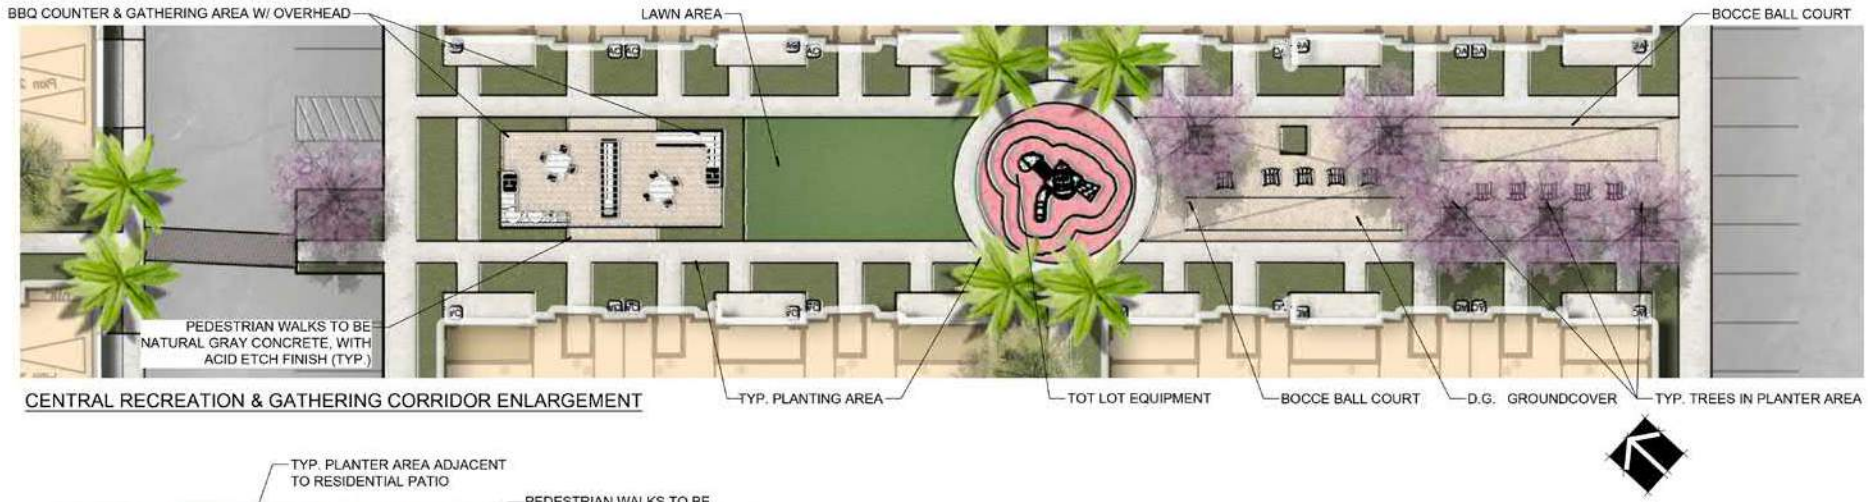
C. Preservation of Slopes and Open Space

The site is surrounded by 20 - 30' tall slopes on all sides except where the project meets the street grade at the corner of Monica Circle and Macario Drive. This area totals more than 4.0 acres that the Project will work to maintain the slopes as existing to the best extent feasible. Additionally, the project is near existing wetlands to the southwest of the site. A minimum fifty (50) foot biological buffer and a minimum fifty (50) foot planning buffer shall be established at the outer edge of the riparian habitat.

Figure 2.3.1. Conceptual Landscape Plan

Figure 2.3.2. Conceptual Landscape Plan

Figure 2.4. Conceptual Pickleball Courts and Dog Park Areas



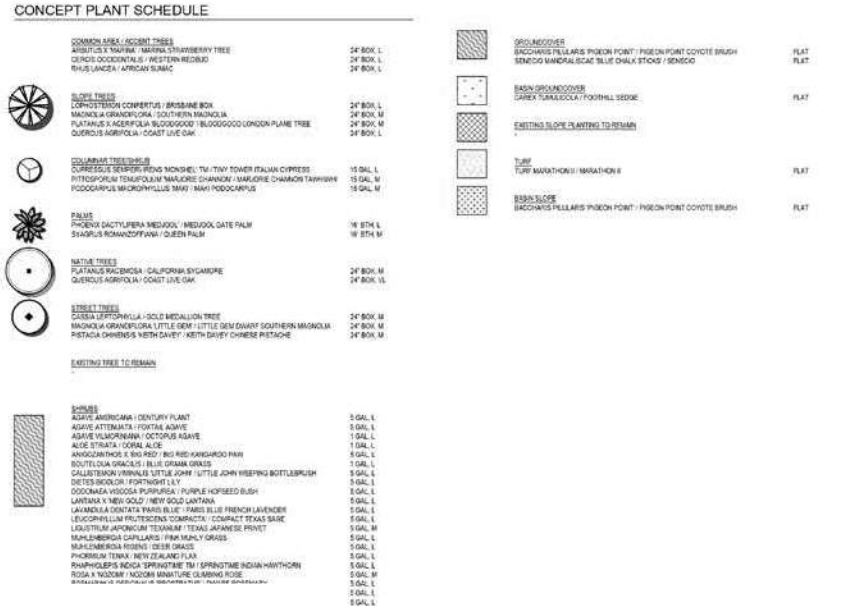


Figure 2.5. Conceptual Central Paseo and Courtyard Areas

2.2.3. Wall and Fence Regulations

The review of walls and fences shall be an integral part of any site plan, permit, or Site Development Plan Review application. Compliance with all wall and fence regulations contained herein shall be required, unless otherwise modified by a DP.

a. Development within the planning shall be designed to minimize walls and fences to support an open community.

b. No walls or fences in excess of three and a half (3.5) feet in height are permitted within the required front setback. All other walls and fences shall not exceed six (6) feet in height. Decorative Pilasters may exceed the maximum permitted height by up to one (1) foot. Taller walls and fences are permitted for retaining or sound attenuation purposes up to a maximum of fifteen (15) feet in height.

c. The height of all walls, fences, and architectural screening elements shall be measured from the finished grade at the base of the wall to the highest point of the element.

d. Where additional height is needed based on security or specific site operating requirements, additional wall/fence height may be approved through a DP, subject to evaluation of adjacencies and necessity.

e. Walls, fences, and architectural screening elements shall be compatible with the architectural treatment of the primary building on the parcel.

f. No wall, fence, or landscaping element shall interfere with intersection visibility, line of sight, or other safety issue.

g. Blank walls are prohibited. Where screening or security walls (excluding wrought iron or other “open” fence types) are located within ten (10) feet of a public right-of-way, landscaping shall be provided between the wall and the right-of-way to a minimum height of four (4) feet to minimize opportunities for crime and unsafe conditions.

h. Retaining walls above four (4) feet in height visible from the public way will be designed as plantable walls with landscape screening to improve their appearance.

i. Approved materials include wood, vinyl, stone, masonry, brick, block, stucco, wrought iron/steel, concrete. Comparable materials are permitted subject to approval of the Director.

j. Prohibited materials include barbed, razor, concertina, corrugated metal and plastic, tarps, and electrified wire of any kind or configuration. Chain-link fencing and similar material are prohibited along any public right-of-way regardless of setback. Where chain-link is used, it shall not be visible from the public right-of-way.

2.2.4. Landscaping Regulations

All open space areas shall be landscaped in accordance with the City of Oceanside's Water Conservation Master Plan. All required landscaping shall be permanently maintained in a healthy and thriving condition, free from weeds, trash, and debris.

2.3. Pedestrian Circulation

The planning area is located within walking distance of numerous uses, services, and facilities that make Pacifica a walkable, transit-oriented community. Within the planning area, the Project establishes a highly connected and efficient circulation system of sidewalks and pathways supported by pedestrian friendly architecture and landscaping. Walkways are designed to provide access in accordance with the Americans with Disability Act (ADA) and to promote walkability and connectivity within the site and to the existing neighborhood. See Figure 2.6. Conceptual Pedestrian Circulation.

2.4. Sustainability

The project proposed by this PD includes a variety of sustainable features and practices intended to reduce energy consumption. This housing will be designed to meet or exceed current building codes and standards. The California Building Code includes the most stringent requirements in the United States for water, material, and energy efficiency; improved air quality; and more. New homes will have features including photovoltaic panels, spray foam insulation, thermal breaks, low-e windows, energy star appliances, and sealed insulated ducts. Landscaping for the Project utilizes a palette of drought tolerant and California native plant palettes.

Figure 2.6. Conceptual Pedestrian Circulation

3 - Architectural Design

3.1. Applicability

Design guidelines are provided to supplement and enhance development standards and regulations as a means to ensure high quality design. Unlike development standards and regulations, design guidelines are intended to be more flexible to allow designers creativity in achieving the design intent and vision for the planning area. While designers are encouraged to adhere to the guidelines contained herein, they are also encouraged to pursue creative designs. Creative designs may not always fit exactly within the guidelines contained herein but are permitted when the Director determines that a particular design offers an equal or superior solution that supports the high-quality urban living environment envisioned by the PD.

3.2. Architectural Styles

The architectural style or styles of buildings within a community strongly define a community's character. To create successful communities, architectural design must embody methods that are flexible enough to meet the changing needs of the consumer market yet, must also be visually pleasing and complementary to the surrounding neighborhood. Pacifica aims to provides a contemporary interpretation of traditional styles found in the existing single family neighborhood surrounding the site.

The Pacifica community is made up of multiple building types. This variation in building types provides diversity between buildings within the planning area. The six-plex (6-plex) and eight-plex A (8-plex A) buildings occurs over seven times each within the community; therefore, additional variation is required and can be achieved through the design of at least two (2) architectural styles.

The project proposes two variations of the Spanish Eclectic style that blend classic elements from the Spanish vernacular with modern construction techniques. Simple massing with a combination of hipped and gabled roof forms are accentuated with stylistic features found in traditional Spanish homes such as arched stucco column porches and decks, clay tile vents, shutters, and stucco over foam window and door trim. These styles combined with a minimum of four (4) color schemes, will work together to create diversity throughout the community.

It should be noted that architecture within the planning area should not be limited to only the styles presented herein. Additional transitional architectural styles not represented in this chapter are permitted within the planning area so long as any proposed architecture is found to be an appropriate design by the City of Oceanside Development Services Department and consistent with design guidelines set forth in the sections below.

3.3 Floor Plans and Elevations

Floor plans should be designed to provide a variety of floor plans that offer different price points for varying income levels. Floor plans range from two (2) to four (4) bedrooms and have an office, niche, or flex space to support working from home. The PD proposes three (3) floor plans and four (4) building types. Floor plans area summarized in Table 3.1. Conceptual Floor Plan Summary and building types are summarized in Table 3.2. Building Type Summary. Final configurations will be approved by the City of Oceanside Development Services Department.

Table 3.1. Conceptual Floor Plan Summary

Plan No.	Square Footage	Bedroom Count	Garage Configuration	Unit Count
2532	121	2	2-car, Side-by-Side	14
1633	1497	3	2-car, Tandem	76
1636	1791	4	2-car, Side-by-Side	74
Total				**164**

Table 3.2. Building Type Summary

Building Type	Plan 2532	Plan 1633	Plan 1632	Total Units per Building	Total Number of Buildings
301	0	2	1	3	2
601	0	3	3	6	13
801	2	3	3	8	7
802	0	4	4	8	3
Total					**25**

The conceptual location for each building type is illustrated Figure 3.1. Conceptual Plotting Plan. Conceptual floor plans and two (2) conceptual elevation styles are illustrated in Figures 3.2.1. through 3.2.14. Styles have Spanish influences expressed in contemporary interpretation. The "A" elevation has Spanish influences with a varying hip roof forms and concrete "s" tile roofing. Primary wall material is stucco with additional details include shutters, soft arches, vertical railing and vent pipes. The "B" elevation varies its Spanish influences with a combination of gable and hip roof forms and concrete "s" tile roofing. Primary wall material is stucco with details including covered entries and porches, vertical railing, and shutters. Colors help articulate the massing of the building while being compatible as a theme throughout the community.

3.4 Massing and Scale

Massing and scale provide the visual identity between residential dwelling units and the environment. Those qualities help dictate the placement, size, and form for multi-family residential buildings within the planning area. Building type placement within the planning area was studied to achieve the best possible groupings as well as providing transition massing from the street, thereby enhancing the visual character of the neighborhood. Incorporation of the following design concepts should be considered for the architecture within the planning area:

- Utilize building-form elements, such as plane breaks, roof forms, and changes in material to define individual units.
- Vertically and horizontally articulate building design for both front and rear elevations.
- Break up long unbroken surfaces on front elevations by providing a change in plane at least every 25 feet.
- Break up long unbroken surfaces on rear elevations by provide second/third floor cantilevers over every other garage door.

3.5 Building Materials, Accents and Colors

Materials are a key factor in defining architectural styles, convey a sense of quality, and contribute to the community's character. Building color is an integral component in unifying buildings, creating variation of street scape, and building on the foundation of the community aesthetic. The following guidelines should be considered when sleeting materials and colors:

- Select material and colors that are appropriate for each facade, and contribute to enhancing the neighborhoods visual theme, match the theme of the specific style of home to which they are applied.
- Use materials and colors to accentuate changes in massing, define individual units, and complement architectural materials and features.
- Choose colors and materials that complement each other, complement neighboring developments, and add depth to the community.
- Avoid materials and colors that significantly clash with the surrounding neighborhood.
- Avoid the use of identical color palettes where possible for adjacent buildings,
- Use colors palettes to distinguish individual buildings within the planning area and improve the visual interest of streetscapes.
- Appropriate materials include wood, stone veneer, stucco, and brick. Metal accents and trims are acceptable within the planning area.
- Choose colors to achieve a reasonable representation of a particular architectural style lending authenticity to the final product.
- Accents colors should complement the palette of the main structure.

Figure 3.3.1 through 3.3.4 provide conceptual color and materials schemes chosen to accompany the architecture shown in Figures 3.2.1. through 3.2.14.; however, alternative materials and colors may be allowed so long as they are determined to be acceptable by the Development Services Department.

4 - General Plan and Zoning Consistency

4.1. Permitted Uses

The permitted uses under this PD Plan are defined in Section 1020(C) of the Zoning Ordinance and as follows:

1. Multiple Unit Structures (MUS). A structure or a group of structures containing two or more dwelling units on a single property. Subdivision of the property may exist to permit ownership of air space in the form of a dwelling unit with an undivided share in common elements. The property may also be divided for the purpose of ownership in the form of a stock cooperative.

4.2. General Plan

Development of the Project requires amending the City of Oceanside's General Plan land use designation. The current General Plan land use designation for the planning area is Civic Institution (CI). This designation does not allow for residential uses as it is intended for public and quasi-public uses and facilities. The change in general plan land use to Medium Density Residential - B (MDB-R) will allow for housing to be developed on the site at an appropriate scale for the area and size of parcel. The proposed General Plan land use designation will be consistent with that of the adjacent residential developments in the surrounding area that include SFD-R, MDB-R, MDC-R, and HD-R properties. Upon amendment of the General Plan to designate the property as MDB-R, the proposed Project will be consistent with the General Plan as outlined below.

4.3. Consistency with General Plan

Section 2.3 of the City of Oceanside's General Plan Land Use Element identifies objectives and policies for residential development throughout the City. As such, the stated objective of this section is:

> *To direct and encourage the proper type, location, timing, and design of housing to benefit the community consistent with the enhancement and establishment of neighborhoods and a well balanced and organized City.*

To meet this objective, the City has established policies within the same section. As previously stated, the proposed General Plan land use designation for the Project is Medium Density Residential - B (MDB-R). The proposed density for the Project is within the density range identified on Table LU-1 of the Land Use Element.

Table 4.1. Project Density

Allowed Density Range	Proposed Project Density
Medium Density B: 10.0 - 15.0 du/ac	12.8 du/ac

The Medium Density B (RM-B) District allows for a base density is 10.0 dwelling units per gross acre and a maximum potential density is 15.0 dwelling units per gross acre. Pursuant to Article 3, Section 330, Definitions of the City of Oceanside Comprehensive Zoning Ordinance (COCZO). "Density is calculated by dividing the number of residential dwelling units by the total number of gross developable areas of land. Lands Considered undevelopable per Section 1.25 of [sic] the Land Use Element shall not be included in density calculations." Section 1.25 of the City of Oceanside General Plan Land Use Element states that "Undevelopable lands include slopes in excess of forty percent (40%) with a minimum elevation differential of twenty-five (25) feet." Based on this definition, the project's gross acreage for calculating density is 12.82 acres, giving the project a density of 12.8 du/ac.

To exceed the base density of 10.0 for the Medium Density B designation, the project must provide superior design features. The proposed project includes the following characteristics that provide excellence in design:

- Exceeding lot standards for lot area, width, depth, and area per unit.
- Exceeding development standards for parking, open space, landscaping, and urban forestry.
- Superior architectural and landscape design and materials.
- Superior recreation facilities and amenities including a dog park, pickleball courts, lawn game areas, community gathering spaces, and more.
- Consolifation of existing legal lots to provide a unified site design.

The Land Use Element also identifies long range policy direction goals, policies and objectives that, broadly, are designed to:

- Provide the consistent, significant, long term preservation and improvement of the environment, values, aesthetics, character, and image of Oceanside as a safe, attractive, desirable and well-balanced community.

- Provide the continual long term enhancement of the community through the development and use of land which is appropriate and orderly with respect to type, location, timing, and intensity.
- Provide continual evaluation of the state of the environment and formulation of a program of planned management, wise utilization and preservation of natural resources to ensure the health, safety, and welfare of the present and future generations.

The Pacifica Planned Development Plan achieves this as follows:

- The Planned Development ensures land use diversity and balanced development by taking a site that is largely already graded with no environmental sensitivities and proposed to utilize the property to its highest and best use. Well thought out site planning and architectural design provide an attractive and highly desirable new housing development in a community that is otherwise built out. Existing adjacencies are respected through large setbacks and respecting existing slopes that surround the site. Natural features are preserved through a large setback from existing riparian habitat. The Project has a small window into the existing community along Monica Circle and Macario Drive that will be enhanced by front doors engaging with the street and high quality architecture that provides a updated look on traditional styles. Housing diversity is maximized by a range of unit types that appeal to different buyer segments while still filling the need for well built workforce housing.
- The proposed development maintains community connection by remaining ungated with minimal walls to create a community that is open to the surrounding neighborhood. Walkways, architecture, and landscaping are designed to maximize pedestrian connectivity and encourage walkability.
- New housing proposed by the PD will be high quality, sustainable development, designed to meet or exceed current building codes and standards. The California Building Code includes the most stringent requirements in the United States for water, material, and energy efficiency; improved air quality; and more. The PD also implements the strategies of the City's Climate Action plan to reduce GHG emissions by including elements that support transit use, active modes of transportation, and the use of electric vehicles. Proximity to transit and trails and the walkable design of the community have the potential to reduct VMT for improved air quality.
- The PD provides a detailed set of architectural and landscape design guidelines to ensure a distinctive built environment with unique and memorable amenities and spaces.

4.4. Zoning Ordinance

Development of the Project also requires amending the Zoning Ordinance. Currently, the entire property is designation as Civic/Public (PS) which does not allow for housing. A Zone Amendment is proposed that will designate the entire property as Planned Development (PD) with the Pacifica Planned Development Plan serving as the regulating document. The requirements for a Planned Development are established in Article 17 of the Zoning Ordinance, with several sections governing the development of projects in this zone.

Section 1702 - Land Use Regulations

Section 1702 states that no use, other than the existing use at the time of establishment of a PD District, shall be permitted except in accordance with a valid PD Plan or Specific Plan. No other uses are proposed other than those included within this PD Plan.

Section 1703 - Development Regulations

Section 1703 specifies the following regulations apply to development of a project within a PD District:

- Minimum Area: The minimum net area of a PD District shall be 4 acres. The proposed Project site has a net developable area of 12.82 acres, with the development pad area of 10.23 acres.
- Residential Unit Density: The residential density allowed by the PD District shall not exceed the maximum density permitted by the General Plan. The Project proposes a General Plan Amendment to Medium Density Residential - B which would allow up to 15 du/ac. The proposed project would be consistent with this density range.
- Performance Standards: The performance standards prescribed by Section 3024 shall apply. Section 3024 defines performance standards regarding noise, vibration, dust, odors, glare, and combustible, explosive, radioactive, and hazardous materials that apply to all use classifications in all zoning districts. The Project shall comply will all standards set forth in Section 3024 of the Zoning Ordinance.

4.5. Consistency with Zoning and Findings

Section 1706.A. establishes the required findings that Planning Commission is required to consider in order to make a recommendation for approval of a PD Plan.

1. The PD or Specific Plan and the Development Plan are consistent with the adopted Land Use Element of the General Plan and other applicable policies and are compatible with surrounding development.

The proposed PD Plan is consistent with the General Plan Land Use Element as the PD and Development Plan will be approved concurrently with a General Plan Amendment. This amendment will change the land use designation to Medium Density Residential - B which allows for housing

developments up to 15.0 du/ac and is consistent with the type of housing proposed. Additionally, the Project proposes a density of 12.8 du/ac which, though above the base density, is well within th range for the proposed land use. The project sits below adjacent uses and has increased setbacks from the surrounding single family homes than the minimum standards require which reduce impacts on the surround development. Additionally, high quality architecture with a range of floorplans and amenities provide a highly desirable community for future homeowners to find attainable housing in the City.

2. The PD Plan or Specific Plan and the Development Plan will enhance the potential for superior urban design in comparison with the development under the base district regulations that would apply if they were not approved.

The PD Plan will result in a superior land use design in comparison with development permitted under the base district regulations. The PD Plan allows for a more creative site design with new homes that will be a high quality, sustainable development, designed to meet or exceed current building codes and standards. The proposed project is able to blend into the existing fabric of the neighborhood by engaging with the pedestrian realm along Monica Circle while drawing residents into a community nestled back from the street. Multiple amenities are located throughout the site creating an environment that encourages neighbor interaction and community gathering. Architectural styling and detail draw on the history of the neighborhood and provide an updated take on traditional styles.

3. Deviations from the base district regulations that otherwise would apply are justified by compensating benefits of the PD Plan or Specific Plan and the Development Plan.

Deviations from the base district regulations allow for the creation of a high quality urban living environment that provides strong pedestrian connectivity to surrounding and modern recreational amenities. The residential community will create a physical environment that optimizes social interaction through the flexible design of common amenity areas. The development standards and design guidelines will provide for a consistent architectural theme and a unified site design that ensure residents can enjoy unique common amenities as well as their own private open space.

4. The PD Plan or Specific Plan and the Development Plan includes adequate provisions for utilities, services, and emergency vehicle access; and public service demands will not exceed the capacity of the existing and planned systems.

The PD Plan and the Development Plan include adequate provisions for utilities, services, and emergency vehicle access. Furthermore, public service demands will not exceed the capacity of the existing and planned systems. As designed, all buildings and other site improvements will accommodate all necessary utilities and services. Emergency vehicle access is provided through a looping circulation pattern with a secondary EVA to and from the site. Similarly, trash and other services will be able to circulation through the site as needed to ensure the needs of the community are met.

3.5 Building Materials, Accents and Colors

Materials are a key factor in defining architectural styles, convey a sense of quality, and contribute to the community's character. Building color is an integral component in unifying buildings, creating variation of street scape, and building on the foundation of the community aesthetic. The following guidelines should be considered when sleeting materials and colors:

- Select material and colors that are appropriate for each facade, and contribute to enhancing the neighborhoods visual theme, match the theme of the specific style of home to which they are applied.
- Use materials and colors to accentuate changes in massing, define individual units, and complement architectural materials and features.
- Choose colors and materials that complement each other, complement neighboring developments, and add depth to the community.
- Avoid materials and colors that significantly clash with the surrounding neighborhood.
- Avoid the use of identical color palettes where possible for adjacent buildings,
- Use colors palettes to distinguish individual buildings within the planning area and improve the visual interest of streetscapes.
- Appropriate materials include wood, stone veneer, stucco, and brick. Metal accents and trims are acceptable within the planning area.
- Choose colors to achieve a reasonable representation of a particular architectural style lending authenticity to the final product.
- Accents colors should complement the palette of the main structure.

Figure 3.3.1 through 3.3.4 provide conceptual color and materials schemes chosen to accompany the architecture shown in Figures 3.2.1. through 3.2.14.; however, alternative materials and colors may be allowed so long as they are determined to be acceptable by the Development Services Department.

4 - General Plan and Zoning Consistency

4.1. Permitted Uses

The permitted uses under this PD Plan are defined in Section 1020(C) of the Zoning Ordinance and as follows:

1. Multiple Unit Structures (MUS). A structure or a group of structures containing two or more dwelling units on a single property. Subdivision of the property may exist to permit ownership of air space in the form of a dwelling unit with an undivided share in common elements. The property may also be divided for the purpose of ownership in the form of a stock cooperative.

4.2. General Plan

Development of the Project requires amending the City of Oceanside's General Plan land use designation. The current General Plan land use designation for the planning area is Civic Institution (CI). This designation does not allow for residential uses as it is intended for public and quasi-public uses and facilities. The change in general plan land use to Medium Density Residential - B (MDB-R) will allow for housing to be developed on the site at an appropriate scale for the area and size of parcel. The proposed General Plan land use designation will be consistent with that of the adjacent residential developments in the surrounding area that include SFD-R, MDB-R, MDC-R, and HD-R properties. Upon amendment of the General Plan to designate the property as MDB-R, the proposed Project will be consistent with the General Plan as outlined below.

4.3. Consistency with General Plan

Section 2.3 of the City of Oceanside's General Plan Land Use Element identifies objectives and policies for residential development throughout the City. As such, the stated objective of this section is:

> *To direct and encourage the proper type, location, timing, and design of housing to benefit the community consistent with the enhancement and establishment of neighborhoods and a well balanced and organized City.*

To meet this objective, the City has established policies within the same section. As previously stated, the proposed General Plan land use designation for the Project is Medium Density Residential - B (MDB-R). The proposed density for the Project is within the density range identified on Table LU-1 of the Land Use Element.

Table 4.1. Project Density

Allowed Density Range	Proposed Project Density
Medium Density B: 10.0 - 15.0 du/ac	12.8 du/ac

The Medium Density B (RM-B) District allows for a base density is 10.0 dwelling units per gross acre and a maximum potential density is 15.0 dwelling units per gross acre. Pursuant to Article 3, Section 330, Definitions of the City of Oceanside Comprehensive Zoning Ordinance (COCZO). "Density is calculated by dividing the number of residential dwelling units by the total number of gross developable areas of land. Lands Considered undevelopable per Section 1.25 of [sic] the Land Use Element shall not be included in density calculations." Section 1.25 of the City of Oceanside General Plan Land Use Element states that "Undevelopable lands include slopes in excess of forty percent (40%) with a minimum elevation differential of twenty-five (25) feet." Based on this definition, the project's gross acreage for calculating density is 12.82 acres, giving the project a density of 12.8 du/ac.

To exceed the base density of 10.0 for the Medium Density B designation, the project must provide superior design features. The proposed project includes the following characteristics that provide excellence in design:

- Exceeding lot standards for lot area, width, depth, and area per unit.
- Exceeding development standards for parking, open space, landscaping, and urban forestry.
- Superior architectural and landscape design and materials.
- Superior recreation facilities and amenities including a dog park, pickleball courts, lawn game areas, community gathering spaces, and more.
- Consolifation of existing legal lots to provide a unified site design.

The Land Use Element also identifies long range policy direction goals, policies and objectives that, broadly, are designed to:

- Provide the consistent, significant, long term preservation and improvement of the environment, values, aesthetics, character, and image of Oceanside as a safe, attractive, desirable and well-balanced community.

- Provide the continual long term enhancement of the community through the development and use of land which is appropriate and orderly with respect to type, location, timing, and intensity.
- Provide continual evaluation of the state of the environment and formulation of a program of planned management, wise utilization and preservation of natural resources to ensure the health, safety, and welfare of the present and future generations.

The Pacifica Planned Development Plan achieves this as follows:

- The Planned Development ensures land use diversity and balanced development by taking a site that is largely already graded with no environmental sensitivities and proposed to utilize the property to its highest and best use. Well thought out site planning and architectural design provide an attractive and highly desirable new housing development in a community that is otherwise built out. Existing adjacencies are respected through large setbacks and respecting existing slopes that surround the site. Natural features are preserved through a large setback from existing riparian habitat. The Project has a small window into the existing community along Monica Circle and Macario Drive that will be enhanced by front doors engaging with the street and high quality architecture that provides a updated look on traditional styles. Housing diversity is maximized by a range of unit types that appeal to different buyer segments while still filling the need for well built workforce housing.
- The proposed development maintains community connection by remaining ungated with minimal walls to create a community that is open to the surrounding neighborhood. Walkways, architecture, and landscaping are designed to maximize pedestrian connectivity and encourage walkability.
- New housing proposed by the PD will be high quality, sustainable development, designed to meet or exceed current building codes and standards. The California Building Code includes the most stringent requirements in the United States for water, material, and energy efficiency; improved air quality; and more. The PD also implements the strategies of the City's Climate Action plan to reduce GHG emissions by including elements that support transit use, active modes of transportation, and the use of electric vehicles. Proximity to transit and trails and the walkable design of the community have the potential to reduct VMT for improved air quality.
- The PD provides a detailed set of architectural and landscape design guidelines to ensure a distinctive built environment with unique and memorable amenities and spaces.

4.4. Zoning Ordinance

Development of the Project also requires amending the Zoning Ordinance. Currently, the entire property is designation as Civic/Public (PS) which does not allow for housing. A Zone Amendment is proposed that will designate the entire property as Planned Development (PD) with the Pacifica Planned Development Plan serving as the regulating document. The requirements for a Planned Development are established in Article 17 of the Zoning Ordinance, with several sections governing the development of projects in this zone.

Section 1702 - Land Use Regulations

Section 1702 states that no use, other than the existing use at the time of establishment of a PD District, shall be permitted except in accordance with a valid PD Plan or Specific Plan. No other uses are proposed other than those included within this PD Plan.

Section 1703 - Development Regulations

Section 1703 specifies the following regulations apply to development of a project within a PD District:

- Minimum Area: The minimum net area of a PD District shall be 4 acres. The proposed Project site has a net developable area of 12.82 acres, with the development pad area of 10.23 acres.
- Residential Unit Density: The residential density allowed by the PD District shall not exceed the maximum density permitted by the General Plan. The Project proposes a General Plan Amendment to Medium Density Residential - B which would allow up to 15 du/ac. The proposed project would be consistent with this density range.
- Performance Standards: The performance standards prescribed by Section 3024 shall apply. Section 3024 defines performance standards regarding noise, vibration, dust, odors, glare, and combustible, explosive, radioactive, and hazardous materials that apply to all use classifications in all zoning districts. The Project shall comply will all standards set forth in Section 3024 of the Zoning Ordinance.

4.5. Consistency with Zoning and Findings

Section 1706.A. establishes the required findings that Planning Commission is required to consider in order to make a recommendation for approval of a PD Plan.

1. The PD or Specific Plan and the Development Plan are consistent with the adopted Land Use Element of the General Plan and other applicable policies and are compatible with surrounding development.

The proposed PD Plan is consistent with the General Plan Land Use Element as the PD and Development Plan will be approved concurrently with a General Plan Amendment. This amendment will change the land use designation to Medium Density Residential - B which allows for housing

developments up to 15.0 du/ac and is consistent with the type of housing proposed. Additionally, the Project proposes a density of 12.8 du/ac which, though above the base density, is well within th range for the proposed land use. The project sits below adjacent uses and has increased setbacks from the surrounding single family homes than the minimum standards require which reduce impacts on the surround development. Additionally, high quality architecture with a range of floorplans and amenities provide a highly desirable community for future homeowners to find attainable housing in the City.

2. The PD Plan or Specific Plan and the Development Plan will enhance the potential for superior urban design in comparison with the development under the base district regulations that would apply if they were not approved.

The PD Plan will result in a superior land use design in comparison with development permitted under the base district regulations. The PD Plan allows for a more creative site design with new homes that will be a high quality, sustainable development, designed to meet or exceed current building codes and standards. The proposed project is able to blend into the existing fabric of the neighborhood by engaging with the pedestrian realm along Monica Circle while drawing residents into a community nestled back from the street. Multiple amenities are located throughout the site creating an environment that encourages neighbor interaction and community gathering. Architectural styling and detail draw on the history of the neighborhood and provide an updated take on traditional styles.

3. Deviations from the base district regulations that otherwise would apply are justified by compensating benefits of the PD Plan or Specific Plan and the Development Plan.

Deviations from the base district regulations allow for the creation of a high quality urban living environment that provides strong pedestrian connectivity to surrounding and modern recreational amenities. The residential community will create a physical environment that optimizes social interaction through the flexible design of common amenity areas. The development standards and design guidelines will provide for a consistent architectural theme and a unified site design that ensure residents can enjoy unique common amenities as well as their own private open space.

4. The PD Plan or Specific Plan and the Development Plan includes adequate provisions for utilities, services, and emergency vehicle access; and public service demands will not exceed the capacity of the existing and planned systems.

The PD Plan and the Development Plan include adequate provisions for utilities, services, and emergency vehicle access. Furthermore, public service demands will not exceed the capacity of the existing and planned systems. As designed, all buildings and other site improvements will accommodate all necessary utilities and services. Emergency vehicle access is provided through a looping circulation pattern with a secondary EVA to and from the site. Similarly, trash and other services will be able to circulation through the site as needed to ensure the needs of the community are met.

Executive Summary

The purpose of this technical report is to assess the potential air quality and greenhouse gas (GHG) emission impacts associated with implementation of the Oceanside Pacifica Development Project (Project). This assessment uses the significance thresholds in Appendix G of the California Environmental Quality Act (CEQA) Guidelines.

Project Overview

The proposed Project consists of a for-sale 164-unit Planned Development Community to be developed on a 14.55-acre site located at the former Pacifica Elementary School site at 4991 Macario Drive in the City of Oceanside (City), California. The proposed neighborhood will consist of three-story attached townhomes oriented towards internal paseos and drives throughout the site. New homes will range in size from a minimum of approximately 1,200 square feet to 1,800 square feet with two (2) to three (3) bedrooms and an attached 2-car garage (either side-by-side or tandem configuration). Each home will include private open space in the form of a patio and/or deck. Common recreational spaces, consisting of approximately 53,700 square feet of open space, will be designed with urban-style amenities such as tot lots, an off-leash dog space, pickle ball courts, bocce ball areas, barbecue areas, and space for a variety of outdoor games.

Project Design Features

The proposed Project would implement both construction-related and operational project design features (PDFs) intended to reduce emissions of criteria air pollutants, toxic air contaminants (TACs), and GHG emissions. The Project would implement **PDF-AQ-1**, **PDF-AQ-2**, and **PDF-GHG-1** as follow:

PDF-AQ-1: Require the installation of only electric or natural gas fireplaces in future residential construction. Future residential units are prohibited from having wood-burning fireplaces or stoves.

PDF-AQ-2: Standard construction practices that would be employed to reduce fugitive dust emissions include watering of the active sites two times per day, depending on weather conditions. Construction of Project components would be subject to SDAPCD Rule 55 – Fugitive Dust Control. Compliance with Rule 55 would limit fugitive dust that may be generated during grading and construction activities.

PDF-AQ-3: The Project will provide temporary electricity to the project site during the building construction phases and prohibit the use of diesel-fueled/natural gas fueled generators during the building construction phases.

PDF-AQ-3: The Project will limit air compressors used during the architectural coating/painting phases to equipment that is electric-powered.

PDF-GHG-1: Photo-voltaic (PV) systems will be installed on each building to meet 50% of forecasted electricity demand.

Air Quality

The air quality impact analysis evaluated the potential for adverse impacts to air quality due to construction and operational emissions resulting from the Project. The State CEQA Guidelines allow lead agencies to use the

significance criteria established by the applicable air quality management district or air pollution control district to evaluate a project's impacts to air quality. The San Diego Air Pollution Control District (SDAPCD) has not developed thresholds of significance for air quality and health risk, however, the SDAPCD has provided emission levels under its permitting authority for new source review for which an Air Quality Impact Assessment (AQIA) is triggered. The County of San Diego has reviewed SDAPCD's trigger levels, as well as EPA rulemaking, and CEQA thresholds adopted by the South Coast Air Quality Management District (SCAQMD) to develop screening-level thresholds (SLTs) to assist lead agencies in determining the significance of project-level air quality impacts within the County. The City of Oceanside has chosen to apply the County of San Diego SLT's for determining mass daily criteria air pollutant thresholds of significance. Criteria air pollutants are defined as pollutants for which the federal and state governments have established ambient air quality standards (criteria) for outdoor concentrations to protect public health. Criteria air pollutants include ozone (O_3), nitrogen dioxide (NO_2), carbon monoxide (CO), sulfur dioxide (SO_2), particulate matter with an aerodynamic diameter less than or equal to 10 microns (PM_{10}), particulate matter with an aerodynamic diameter less than or equal to 2.5 microns ($PM_{2.5}$), and lead. Pollutants that are evaluated include volatile organic compounds (VOCs), oxides of nitrogen (NO_x), CO, sulfur oxides (SO_x), PM_{10}, and $PM_{2.5}$. VOCs and NO_x are important because they are precursors to O_3.

Air Quality Plan Consistency

If a project proposes development that is greater than that anticipated in the local plan and the growth projections set by the San Diego Association of Governments (SANDAG), the project might be in conflict with the State Implementation Plan and SDAPCD Regional Air Quality Strategy, and therefore may contribute to a potentially significant cumulative impact on air quality. The Project was deemed to be consistent with the current air quality plan because although it would require a general plan amendment and rezone, the development intensity would be consistent with the existing land use designations and the anticipated growth associated with the Project does not exceed that projected by SANDAG. In addition, the Project would not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations as evidenced by its construction and operational emissions being less than County of San Diego thresholds of significance. Based on these considerations, impacts related to the Project's potential to conflict with or obstruct implementation of the applicable air quality plan would be less than significant.

Cumulatively Considerable Net Increase in Nonattainment Criteria Air Pollutant Emissions

Construction of the Project would result in the temporary addition of pollutants to the local airshed caused by on-site sources (i.e., off-road construction equipment, soil disturbance, and VOC off-gassing) and off-site sources (i.e., on-road haul trucks, vendor trucks, and worker vehicle trips). The maximum daily construction emissions would not exceed the County of San Diego significance thresholds for VOCs, NO_x, CO, SO_x, PM_{10}, or $PM_{2.5}$ during construction. Therefore, the Project would have a less than significant impact.

The analysis herein assumed an operational year of 2026. Operation of the Project would generate operational criteria air pollutants from mobile sources (vehicles), area sources (consumer product use, architectural coatings, and landscape maintenance equipment), and energy (natural gas). Maximum operational emissions would not exceed the County of San Diego operational significance thresholds for VOCs, NO_x, CO, SO_x, PM_{10}, or $PM_{2.5}$.

The potential for a project to result in a cumulatively considerable impact is based on the project's potential to exceed the project-specific daily thresholds. Because maximum construction and operational emissions would not exceed the County of San Diego significance thresholds for VOCs, NO_x, CO, SO_x, PM_{10}, or $PM_{2.5}$, the Project would not result in a cumulatively considerable increase in criteria air pollutants.

Exposure of Sensitive Receptors

Regarding potential carbon monoxide (CO) violations or hotspots, the County of San Diego concluded in its General Plan Update (2011) that there are no intersections within the County that are more congested than the South Coast Air Quality Management District's (SCAQMD) most congested intersections evaluated for CO hotspots in its 2003 CO attainment redesignation request to the United States Environmental Protection Agency (US EPA). As such, the County of San Diego concluded that there were no potential CO violations in the County. The proposed development will not result in traffic that exceeds traffic volumes considered in the County of San Diego General Plan Update analysis and CO concentrations in the project area are well below ambient air quality standards. The Project would not result in a CO hotspot given the above information and continued improvements in vehicle emissions. The impact would be less than significant.

A health risk assessment (HRA) was also conducted to determine the potential impacts of exposure to diesel particulate matter (DPM), which is a TAC, at existing proximate sensitive receptors in the Project vicinity and future onsite receptors. The results of the HRA demonstrate that after implementation of MM-AQ-1, which requires use of Tier 4 equipment during construction, the TAC exposure from construction diesel exhaust emissions would not result in cancer risk above the 10 in 1 million threshold, nor a Chronic Hazard Index greater than 1.0. Therefore, impacts to sensitive receptors would be less than significant.

Other Emissions

Potential odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment, architectural coatings, and asphalt pavement application, which would disperse rapidly from the Project site and generally occur at magnitudes that would not affect substantial numbers of people. Impacts associated with odors during construction would be less than significant. The Project would be a mixed-use residential development that would not include land uses with sources that have the potential to generate substantial odors, and impacts associated with odors during operation would be less than significant.

Greenhouse Gas Emissions

Global climate change is primarily considered a cumulative impact but must also be evaluated on a project-level under CEQA. A project contributes to this potential impact through its incremental emissions combined with the cumulative increase of all other sources of greenhouse gas (GHG) emissions. GHGs are gases that absorb infrared radiation in the atmosphere. Principal GHGs regulated under state and federal law and regulations include carbon dioxide (CO_2), methane (CH_4), and nitrous oxide (N_2O). GHG emissions are measured in metric tons of CO_2 equivalent (MT CO_2e), which account for weighted global warming potential (GWP) factors for CH_4 and N_2O.

The City adopted a Climate Action Plan (CAP) in 2019, which is a qualified GHG reduction plan under CEQA Guidelines Section 15183.5, and thus, can be used for CEQA streamlining and tiering of project-level analyses. The Project's consistency with the CAP is used to evaluate the potential for the Project to result in GHG emissions that may have a significant impact on the environment and the potential for the Project to conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions.

Project Impacts

The project's GHG impacts were evaluated against the City's CAP. To demonstrate that a project would comply with the CAP, requires a two-step process: the first step is a screening-level bright line threshold, which if exceeded, would require the second step, which is a CAP efficiency and CAP measures consistency analysis.

As discussed in Section 3.4 of this report, the Project operational emissions in 2026 plus amortized project construction emissions would be greater than the City's CAP GHG threshold of 900 MT CO_2e per year. As such, the Project is required to complete the CAP Consistency Checklist to ensure that emission targets identified in the City's CAP can be achieved considering the additional emissions. The Project was eligible to use the CAP Consistency Checklist under criteria 4, it's GHG emissions would be less than those generated by land uses allowed under the existing designation. The Project would implement on-site renewable energy through solar photovoltaic (PV) systems for the development, electric vehicle (EV) charging infrastructure, and canopy coverage and permeable surface area that meets requirements outlined in the City's Zoning Ordinance. Accordingly, the Project is deemed consistent with the measurable goals outlined in the City's CAP.

The next step to determine CAP consistency is to estimate the Project's GHG efficiency which is a measure of the project's GHG operational GHG emissions divided by it service population. Construction of the Project would result in GHG emissions primarily associated with the use of off-road construction equipment, on-road hauling and vendor (material delivery) trucks, and worker vehicles. The Project would generate operational GHG emissions from area sources (landscape maintenance), energy sources (electricity consumption and natural gas combustion), mobile sources (vehicle trips), water supply and wastewater treatment, and solid waste. Estimated annual Project-generated operational GHG emissions at buildout in 2026 would be approximately 1,193 MT CO_2e per year. Estimated annual Project-generated operational emissions in 2026, plus amortized Project construction emissions would be approximately 1,221 MT CO_2e per year. The total service population was 457 residents resulting in a GHG efficiency metric of 2.69 MT CO2e per service population. This is less than the City's GHG efficiency target of 3.0 MT CO_2e post-2025. The Project meets this criterion and is consistent with the CAP. The Project is consistent with the two-step process for determining consistency with the City's CAP.

Regarding the CARB's 2022 Scoping Plan and AB 1279 (2045 carbon neutrality), the City's CAP would puts it on trajectory for meeting its share of reductions towards 2050, which would align with 2045 targets in concert with CARB measures for carbon capture and storage.

Based on the Project's consistency with the City's CAP, the Project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs or generate GHGs that may have a significant impact on the environment. This impact would be **less than significant**.

Mitigation Measures

Mitigation Measure AQ-1

Tier 4 Interim Construction Equipment. Prior to the commencement of any construction activities, the applicant or its designee shall provide evidence to the City of Oceanside (City) that for off-road equipment with engines rated at 300 horsepower or greater, no construction equipment shall be used that is less than Tier 4 Interim or equivalent (i.e., Tier 4 Final or other diesel particulate filter control that achieves equal or increased PM_{10} exhaust reduction). An exemption from these requirements may be granted by the City if the applicant documents that equipment with the required tier is not reasonably available and equivalent reductions in PM_{10} exhaust emissions are achieved from other construction equipment. The applicant shall be responsible for preparation of a new air quality assessment demonstrating that health risks are below significance thresholds of 10 in a million with the revised equipment mix. Before an exemption may be considered by the City, the applicant shall be required to demonstrate that two

construction fleet owners/operators in the San Diego Region were contacted and that those owners/operators confirmed Tier 4 equipment or equivalent could not be located within the San Diego region. The City shall review the exemption request and provide a determination within 10 business days from receipt of the request.

Summary of Findings

Table ES-1. Summary of Impact Determinations

Analysis	Report Section	CEQA Checklist Question	Significance Determinations	
			Unmitigated	Mitigated
Air Quality Management Plan	2.4.1	AQ-1	Less than Significant	No Mitigation Required.
Cumulatively Considerable Net Increase of Any Criteria Pollutant	2.4.2	AQ-2	Less than Significant	No Mitigation Required.
Sensitive Receptors	2.4.3	AQ-3	Less than Significant	Less than Significant with Mitigation.
Other Emissions and Odors	2.4.4	AQ-4	Less than Significant	No Mitigation Required.
GHG Emissions and GHG Reduction Plan	3.4.1	GHG-1 and GHG-2	Less than Significant	No Mitigation Required.

1 Introduction

1.1 Report Purpose and Scope

The purpose of this technical report is to assess the potential air quality and greenhouse gas (GHG) emissions impacts associated with construction and operation of the Oceanside Pacifica Development Project (Project). This analysis uses the significance thresholds in Appendix G of the California Environmental Quality Act (CEQA) Guidelines (14 CCR 15000 et seq.) and the emissions-based significance thresholds recommended by the San Diego Air Pollution Control District (SDAPCD) and other applicable thresholds of significance.

1.2 Project Location

The Pacifica Planned Development Plan planning area encompasses approximately 14.5 gross acres. As illustrated in Figure 1. Project Location, the planning area is situated in the northeast portion of the City of Oceanside in the North Valley neighborhood. The planning area is located approximately 0.5 mile from the San Luis Rey Transit Center and 1.5 miles from Highway 76.

1.3 Project Description

The proposed Project consists of a for-sale 164-unit Planned Development Community to be developed on a 14.55-acre site located at the former Pacifica Elementary School site at 4991 Macario Drive (see Figure 2 Site Plan). The neighborhood will consist of three-story attached townhomes oriented towards internal paseos and drives throughout the site. New homes will range in size from a minimum of approximately 1,200 square feet to 1,800 square feet with two (2) to three (3) bedrooms and an attached 2-car garage (either side-by-side or tandem configuration). Each home will include private open space in the form of a patio and/or deck. Common recreational spaces, consisting of approximately 53,700 square feet of open space, will be designed with urban-style amenities such as tot lots, an off-leash dog space, pickle ball courts, bocce ball areas, barbecue areas, and space for a variety of outdoor games.

1.4 Project Design Features

The Project would implement construction-related and operational project design features (PDFs) intended to reduce emissions of criteria air pollutants and toxic air contaminants (TACs) as follows:

PDF-AQ-1: Require the installation of only electric or natural gas fireplaces in future residential construction. Future residential units are prohibited from having wood-burning fireplaces or stoves.

PDF-AQ-2: Standard construction practices that would be employed to reduce fugitive dust emissions include watering of the active sites two times per day, depending on weather conditions. Construction of Project components would be subject to SDAPCD Rule 55 – Fugitive Dust Control. Compliance with Rule 55 would limit fugitive dust (PM10 and PM2.5) that may be generated during grading and construction activities.

PDF-AQ-3: The Project will provide temporary electricity to the project site during the building construction phases and prohibit the use of diesel-fueled/natural gas fueled generators during the building construction phases.

PDF-AQ-3: The Project will limit air compressors used during the architectural coating/painting phases to equipment that is electric-powered.

PDF-GHG-1: Photo-voltaic (PV) systems will be installed on each building to meet 50% of forecasted electricity demand.

PDF-AQ-1, PDF-AQ-2, PDF-AQ-3, **PDF-AQ-4**, and **PDF-GHG-1** would be required as City-imposed Conditions of Approval to ensure they are implemented during construction and operation of the proposed Project.

2 Air Quality

2.1 Environmental Setting

2.1.1 Climate and Topography

The weather of the San Diego region, as in most of Southern California, is influenced by the Pacific Ocean and its semi-permanent high-pressure systems that result in dry, warm summers and mild, occasionally wet winters. The average temperature ranges (in degrees Fahrenheit) from the mid-40s to the high 90s. Most of the region's precipitation falls from November to April, with infrequent (approximately 10%) precipitation during the summer. The average seasonal precipitation along the coast is approximately 10 inches; the amount increases with elevation as moist air is lifted over the mountains (WRCC 2016).

The topography in the San Diego region varies greatly, from beaches on the west to mountains and desert on the east; along with local meteorology, it influences the dispersal and movement of pollutants in the basin. The mountains to the east prohibit dispersal of pollutants in that direction and help trap them in inversion layers.

The interaction of ocean, land, and the Pacific High-Pressure Zone maintains clear skies for much of the year and influences the direction of prevailing winds (westerly to northwesterly). Local terrain is often the dominant factor inland, and winds in inland mountainous areas tend to blow through the valleys during the day and down the hills and valleys at night.

2.1.2 San Diego Air Basin Climatology

The Project area is located within the San Diego Air Basin (SDAB) and is subject to the SDAPCD guidelines and regulations. The SDAB is one of 15 air basins that geographically divide the State of California. The SDAB is currently classified as a federal nonattainment area for ozone (O_3) and a state nonattainment area for particulate matter less than 10 microns (PM_{10}), particulate matter less than 2.5 microns ($PM_{2.5}$), and O_3.

The SDAB, which lies in the southwest corner of California and comprises the entire San Diego region, covers 4,260 square miles and is an area of high air pollution potential. The SDAB experiences warm summers, mild winters, infrequent rainfalls, light winds, and moderate humidity. This usually mild climatological pattern is interrupted infrequently by periods of extremely hot weather, winter storms, or Santa Ana winds.

The SDAB experiences frequent temperature inversions. Subsidence inversions occur during the warmer months as descending air associated with the Pacific High-Pressure Zone meets cool marine air. The boundary between the two layers of air creates a temperature inversion that traps pollutants. The other type of inversion, a radiation inversion, develops on winter nights when air near the ground cools by heat radiation and air aloft remains warm. The shallow inversion layer formed between these two air masses also can trap pollutants. As the pollutants become more concentrated in the atmosphere, photochemical reactions occur that produce O_3, which contributes to the formation of smog. Smog is a combination of smoke and other particulates, O_3, hydrocarbons, oxides of nitrogen (NO_x) and other chemically reactive compounds which, under certain conditions of weather and sunlight, may result in a murky brown haze that causes adverse health effects (CARB 2022a).

Light daytime winds, predominantly from the west, further aggravate the condition by driving air pollutants inland, toward the mountains. During the fall and winter, air quality problems are created due to carbon monoxide (CO) and NO_x emissions. CO concentrations are generally higher in the morning and late evening. In the morning, CO levels are elevated due to cold temperatures and the large number of motor vehicles traveling. Higher CO levels during the late evenings are a result of stagnant atmospheric conditions trapping CO in the area. Since CO is produced almost entirely from automobiles, the highest CO concentrations in the SDAB are associated with heavy traffic. Nitrogen dioxide (NO_2) levels are also generally higher during fall and winter days.

Under certain conditions, atmospheric oscillation results in the offshore transport of air from the Los Angeles region to San Diego County. This often produces high O_3 concentrations, as measured at air pollutant monitoring stations within San Diego County. The transport of air pollutants from Los Angeles to San Diego has also occurred within the stable layer of the elevated subsidence inversion, where high levels of O_3 are transported.

2.1.3 Sensitive Receptors

Air quality varies as a direct function of the amount of pollutants emitted into the atmosphere, the size and topography of the air basin, and the prevailing meteorological conditions. Air quality problems arise when the rate of pollutant emissions exceeds the rate of dispersion.

Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. People most likely to be affected by air pollution, as identified by the California Air Resources Board (CARB), include children, older adults, and people with cardiovascular and chronic respiratory diseases. According to the SDAPCD, sensitive receptors are those who are especially susceptible to adverse health effects from exposure to toxic air contaminants, such as children, the elderly, and the ill. Sensitive receptors include residences, schools (grades Kindergarten through 12), libraries, day care centers, nursing homes, retirement homes, health clinics, and hospitals within 2 kilometers of the facility (SDAPCD 2022a). The closest sensitive receptors to the Project site are single-family residences immediately adjacent on the northern and southern boundaries of the site.

2.1.4 Pollutants and Effects

2.1.4.1 Criteria Air Pollutants

Criteria air pollutants are defined as pollutants for which the federal and state governments have established ambient air quality standards, or criteria, for outdoor concentrations to protect public health. The federal and state standards have been set, with an adequate margin of safety, at levels above which concentrations could be harmful to human health and welfare. These standards are designed to protect the most sensitive persons from illness or discomfort. Pollutants of concern include O_3, NO_2, CO, sulfur dioxide (SO_2), PM_{10}, $PM_{2.5}$, and lead. These pollutants are discussed in the following paragraphs.[1] In California, sulfates, vinyl chloride, hydrogen sulfide, and visibility-reducing particles are also regulated as criteria air pollutants.

Ozone (O_3). O_3 is a strong-smelling, pale blue, reactive, toxic chemical gas consisting of three oxygen atoms. It is a secondary pollutant formed in the atmosphere by a photochemical process involving the sun's energy and O_3

[1] The following descriptions of health effects for each of the criteria air pollutants associated with project construction and operations are based on the U.S. Environmental Protection Agency's "Six Common Air Pollutants" (EPA 2017a) and the California Air Resources Board's "Glossary of Air Pollutant Terms" (CARB 2017) published information.

precursors. These precursors are mainly NO_x and VOCs. The maximum effects of precursor emissions on O_3 concentrations usually occur several hours after they are emitted and many miles from the source. Meteorology and terrain play major roles in O_3 formation, and ideal conditions occur during summer and early autumn on days with low wind speeds or stagnant air, warm temperatures, and cloudless skies. O_3 exists in the upper atmosphere O_3 layer (stratospheric O_3) and at the Earth's surface in the troposphere.[2] The O_3 that the U.S. Environmental Protection Agency (EPA) and the CARB regulate as a criteria air pollutant is produced close to the ground level, where people live, exercise, and breathe. Ground-level O_3 is a harmful air pollutant that causes numerous adverse health effects and is thus considered "bad" O_3. Stratospheric, or "good," O_3 occurs naturally in the upper atmosphere, where it reduces the amount of ultraviolet light (i.e., solar radiation) entering the Earth's atmosphere. Without the protection of the beneficial stratospheric O_3 layer, plant and animal life would be seriously harmed.

O_3 in the troposphere causes numerous adverse health effects; short-term exposures (lasting for a few hours) to O_3 at levels typically observed in Southern California can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes (EPA 2013).

Inhalation of O_3 causes inflammation and irritation of the tissues lining human airways, causing and worsening a variety of symptoms. Exposure to O_3 can reduce the volume of air that the lungs breathe in, thereby causing shortness of breath. O_3 in sufficient doses increases the permeability of lung cells, rendering them more susceptible to toxins and microorganisms. The occurrence and severity of health effects from O_3 exposure vary widely among individuals, even when the dose and the duration of exposure are the same. Research shows adults and children who spend more time outdoors participating in vigorous physical activities are at greater risk from the harmful health effects of O_3 exposure. While there are relatively few studies on the effects of O_3 on children, the available studies show that children are no more or less likely to suffer harmful effects than adults. However, there are a number of reasons why children may be more susceptible to O_3 and other pollutants. Children and teens spend nearly twice as much time outdoors and engaged in vigorous activities as adults. Children breathe more rapidly than adults and inhale more pollution per pound of their body weight than adults. Also, children are less likely than adults to notice their own symptoms and avoid harmful exposures. Further research may be able to better distinguish between health effects in children and adults. Children, adolescents and adults who exercise or work outdoors, where O_3 concentrations are the highest, are at the greatest risk of harm from this pollutant (CARB 2023a).

Nitrogen Dioxide (NO_2). NO_2 is a brownish, highly reactive gas that is present in all urban atmospheres. The major mechanism for the formation of NO_2 in the atmosphere is the oxidation of the primary air pollutant nitric oxide (NO), which is a colorless, odorless gas. NO_x plays a major role, together with VOCs, in the atmospheric reactions that produce O_3. NO_x is formed from fuel combustion under high temperature or pressure. In addition, NO_x is an important precursor to acid rain and may affect both terrestrial and aquatic ecosystems. The two major emissions sources are transportation and stationary fuel combustion sources such as electric utility and industrial boilers.

NO_2 can irritate the lungs, cause bronchitis and pneumonia, and lower resistance to respiratory infections (EPA 2016a). A large body of health science literature indicates that exposure to NO_2 can induce adverse health effects. The strongest health evidence, and the health basis for the ambient air quality standards for NO_2, results from controlled human exposure studies that show that NO_2 exposure can intensify responses to allergens in allergic asthmatics.

[2] The troposphere is the layer of the Earth's atmosphere nearest to the surface of the Earth. The troposphere extends outward about 5 miles at the poles and about 10 miles at the equator.

In addition, a number of epidemiological studies have demonstrated associations between NO_2 exposure and premature death, cardiopulmonary effects, decreased lung function growth in children, respiratory symptoms, emergency room visits for asthma, and intensified allergic responses. Infants and children are particularly at risk because they have disproportionately higher exposure to NO_2 than adults due to their greater breathing rate for their body weight and their typically greater outdoor exposure duration. Several studies have shown that long-term NO_2 exposure during childhood, the period of rapid lung growth, can lead to smaller lungs at maturity in children with higher levels of exposure compared to children with lower exposure levels. In addition, children with asthma have a greater degree of airway responsiveness compared with adult asthmatics. In adults, the greatest risk is to people who have chronic respiratory diseases, such as asthma and chronic obstructive pulmonary disease (CARB 2023b).

Carbon Monoxide (CO). CO is a colorless, odorless gas formed by the incomplete combustion of hydrocarbon, or fossil fuels. CO is emitted almost exclusively from motor vehicles, power plants, refineries, industrial boilers, ships, aircraft, and trains. In urban areas, such as the Project location, automobile exhaust accounts for the majority of CO emissions. CO is a non-reactive air pollutant that dissipates relatively quickly; therefore, ambient CO concentrations generally follow the spatial and temporal distributions of vehicular traffic. CO concentrations are influenced by local meteorological conditions—primarily wind speed, topography, and atmospheric stability. CO from motor vehicle exhaust can become locally concentrated when surface-based temperature inversions are combined with calm atmospheric conditions, which is a typical situation at dusk in urban areas from November to February. The highest levels of CO typically occur during the colder months of the year, when inversion conditions are more frequent.

CO is harmful because it binds to hemoglobin in the blood, reducing the ability of blood to carry oxygen. This interferes with oxygen delivery to the body's organs. The most common effects of CO exposure are fatigue, headaches, confusion and reduced mental alertness, light-headedness, and dizziness due to inadequate oxygen delivery to the brain. For people with cardiovascular disease, short-term CO exposure can further reduce their body's already compromised ability to respond to the increased oxygen demands of exercise, exertion, or stress. Inadequate oxygen delivery to the heart muscle leads to chest pain and decreased exercise tolerance. Unborn babies whose mothers experience high levels of CO exposure during pregnancy are at risk of adverse developmental effects. Unborn babies, infants, elderly people, and people with anemia or with a history of heart or respiratory disease are most likely to experience health effects with exposure to elevated levels of CO (CARB 2023c).

Sulfur Dioxide (SO_2). SO_2 is a colorless, pungent gas formed primarily from incomplete combustion of sulfur-containing fossil fuels. The main sources of SO_2 are coal and oil used in power plants and industries; as such, the highest levels of SO_2 are generally found near large industrial complexes. In recent years, SO_2 concentrations have been reduced by the increasingly stringent controls placed on stationary source emissions of SO_2 and limits on the sulfur content of fuels.

Controlled human exposure and epidemiological studies show that children and adults with asthma are more likely to experience adverse responses with SO_2 exposure, compared with the non-asthmatic population. Effects at levels near the 1-hour standard are those of asthma exacerbation, including bronchoconstriction accompanied by symptoms of respiratory irritation such as wheezing, shortness of breath, and chest tightness, especially during exercise or physical activity. Also, exposure at elevated levels of SO_2 (above 1 parts per million [ppm]) results in increased incidence of pulmonary symptoms and disease, decreased pulmonary function, and increased risk of mortality. Older people and people with cardiovascular disease or chronic lung disease (such as bronchitis or emphysema) are most likely to experience these adverse effects (CARB 2023d).

SO_2 is of concern both because it is a direct respiratory irritant and because it contributes to the formation of sulfate and sulfuric acid in particulate matter (NRC 2005). People with asthma are of particular concern, both because they have increased baseline airflow resistance and because their SO_2-induced increase in airflow resistance is greater than in healthy people, and it increases with the severity of their asthma (NRC 2005). SO_2 is thought to induce airway constriction via neural reflexes involving irritant receptors in the airways (NRC 2005).

Particulate Matter (PM). Particulate matter pollution consists of very small liquid and solid particles floating in the air, which can include smoke, soot, dust, salts, acids, and metals. Particulate matter can form when gases emitted from industries and motor vehicles undergo chemical reactions in the atmosphere. $PM_{2.5}$ and PM_{10} represent fractions of particulate matter. Coarse particulate matter (PM_{10}) consists of particulate matter that is 10 microns or less in diameter and is about 1/7 the thickness of a human hair. Major sources of PM_{10} include crushing or grinding operations; dust stirred up by vehicles traveling on roads; wood-burning stoves and fireplaces; dust from construction, landfills, and agriculture; wildfires and brush/waste burning; industrial sources; windblown dust from open lands; and atmospheric chemical and photochemical reactions. Fine particulate matter ($PM_{2.5}$) consists of particulate matter that is 2.5 microns or less in diameter and is roughly 1/28 the diameter of a human hair. $PM_{2.5}$ results from fuel combustion (e.g., from motor vehicles and power generation and industrial facilities), residential fireplaces, and woodstoves. In addition, $PM_{2.5}$ can be formed in the atmosphere from gases such as sulfur oxides (SO_x), NO_x, and VOCs.

$PM_{2.5}$ and PM_{10} pose a greater health risk than larger-size particles. When inhaled, these tiny particles can penetrate the human respiratory system's natural defenses and damage the respiratory tract. $PM_{2.5}$ and PM_{10} can increase the number and severity of asthma attacks, cause or aggravate bronchitis and other lung diseases, and reduce the body's ability to fight infections. Very small particles of substances such as lead, sulfates, and nitrates can cause lung damage directly or be absorbed into the blood stream, causing damage elsewhere in the body. Additionally, these substances can transport adsorbed gases such as chlorides or ammonium into the lungs, also causing injury. Whereas PM_{10} tends to collect in the upper portion of the respiratory system, $PM_{2.5}$ is so tiny that it can penetrate deeper into the lungs and damage lung tissue. Suspended particulates also damage and discolor surfaces on which they settle and produce haze and reduce regional visibility.

A number of adverse health effects have been associated with exposure to both $PM_{2.5}$ and PM_{10}. For $PM_{2.5}$, short-term exposures (up to 24-hour duration) have been associated with premature mortality, increased hospital admissions for heart or lung causes, acute and chronic bronchitis, asthma attacks, emergency room visits, respiratory symptoms, and restricted activity days. These adverse health effects have been reported primarily in infants, children, and older adults with preexisting heart or lung diseases. In addition, of all of the common air pollutants, $PM_{2.5}$ is associated with the greatest proportion of adverse health effects related to air pollution, both in the United States and worldwide based on the World Health Organization's Global Burden of Disease Project. Short-term exposures to PM_{10} have been associated primarily with worsening of respiratory diseases, including asthma and chronic obstructive pulmonary disease, leading to hospitalization and emergency department visits (CARB 2017).

Long-term exposure (months to years) to $PM_{2.5}$ has been linked to premature death, particularly in people who have chronic heart or lung diseases, and reduced lung function growth in children. The effects of long-term exposure to PM_{10} are less clear, although several studies suggest a link between long-term PM_{10} exposure and respiratory mortality. The International Agency for Research on Cancer published a review in 2015 that concluded that particulate matter in outdoor air pollution causes lung cancer (CARB 2017).

Lead. Lead in the atmosphere occurs as particulate matter. Sources of lead include leaded gasoline; the manufacturing of batteries, paints, ink, ceramics, and ammunition; and secondary lead smelters. Prior to 1978, mobile emissions were the primary source of atmospheric lead. Between 1978 and 1987, the phaseout of leaded gasoline reduced the overall inventory of airborne lead by nearly 95%. With the phaseout of leaded gasoline, secondary lead smelters, battery recycling, and manufacturing facilities are becoming lead-emissions sources of greater concern.

Prolonged exposure to atmospheric lead poses a serious threat to human health. Health effects associated with exposure to lead include gastrointestinal disturbances, anemia, kidney disease, and in severe cases, neuromuscular and neurological dysfunction. Of particular concern are low-level lead exposures during infancy and childhood. Such exposures are associated with decrements in neurobehavioral performance, including IQ performance, psychomotor performance, reaction time, and growth. Children are highly susceptible to the effects of lead.

Volatile Organic Compounds (VOCs). Hydrocarbons are organic gases that are formed from hydrogen and carbon and sometimes other elements. Hydrocarbons that contribute to formation of O_3 are referred to and regulated as VOCs (also referred to as reactive organic gases). Combustion engine exhaust, oil refineries, and fossil-fueled power plants are the sources of hydrocarbons. Other sources of hydrocarbons include evaporation from petroleum fuels, solvents, dry-cleaning solutions, and paint.

The primary health effects of VOCs result from the formation of O_3 and its related health effects. High levels of VOCs in the atmosphere can interfere with oxygen intake by reducing the amount of available oxygen through displacement. Carcinogenic forms of hydrocarbons, such as benzene, are considered TACs.

Sulfates. Sulfates are the fully oxidized form of sulfur, which typically occur in combination with metals or hydrogen ions. Sulfates are produced from reactions of SO_2 in the atmosphere and can result in respiratory impairment, as well as reduced visibility.

Vinyl Chloride. Vinyl chloride is a colorless gas with a mild, sweet odor, which has been detected near landfills, sewage plants, and hazardous waste sites, due to the microbial breakdown of chlorinated solvents. Short-term exposure to high levels of vinyl chloride in air can cause nervous system effects, such as dizziness, drowsiness, and headaches. Long-term exposure through inhalation can cause liver damage, including liver cancer.

Hydrogen Sulfide. Hydrogen sulfide is a colorless and flammable gas that has a characteristic odor of rotten eggs. Sources of hydrogen sulfide include geothermal power plants, petroleum refineries, sewers, and sewage treatment plants. Exposure to hydrogen sulfide can result in nuisance odors, as well as headaches and breathing difficulties at higher concentrations.

Visibility-Reducing Particles. Visibility-reducing particles are any particles in the air that obstruct the range of visibility. Effects of reduced visibility can include obscuring the viewshed of natural scenery, reducing airport safety, and discouraging tourism. Sources of visibility-reducing particles are the same as for $PM_{2.5}$.

2.1.4.2 Non-Criteria Pollutants

Toxic Air Contaminants (TACs). A substance is considered toxic if it has the potential to cause adverse health effects in humans, including increasing the risk of cancer upon exposure, or acute and/or chronic noncancer health effects. A toxic substance released into the air is considered a TAC. TACs are identified by federal and state agencies based

on a review of available scientific evidence. In the State of California, TACs are identified through a two-step process that was established in 1983 under the Toxic Air Contaminant Identification and Control Act. This two-step process of risk identification and risk management and reduction was designed to protect residents from the health effects of toxic substances in the air. In addition, the California Air Toxics "Hot Spots" Information and Assessment Act, Assembly Bill (AB) 2588, was enacted by the legislature in 1987 to address public concern over the release of TACs into the atmosphere. The law requires facilities emitting toxic substances to provide local air pollution control districts with information that will allow an assessment of the air toxics problem, identification of air toxics emissions sources, location of resulting hotspots, notification of the public exposed to significant risk, and development of effective strategies to reduce potential risks to the public over 5 years.

Examples include certain aromatic and chlorinated hydrocarbons, certain metals, and asbestos. TACs are generated by a number of sources, including stationary sources such as dry cleaners, gas stations, combustion sources, and laboratories; mobile sources such as automobiles; and area sources such as landfills. Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and noncarcinogenic effects. Noncarcinogenic effects typically affect one or more target organ systems and may be experienced on either short-term (acute) or long-term (chronic) exposure to a given TAC.

Diesel Particulate Matter (DPM). DPM is part of a complex mixture that makes up diesel exhaust. Diesel exhaust is composed of two phases, gas and particle, both of which contribute to health risks. More than 90% of DPM is less than 1 micrometer in diameter (about 1/70th the diameter of a human hair), and thus is a subset of $PM_{2.5}$ (CARB 2022b). DPM is typically composed of carbon particles ("soot," also called black carbon) and numerous organic compounds, including over 40 known cancer-causing organic substances. Examples of these chemicals include polycyclic aromatic hydrocarbons, benzene, formaldehyde, acetaldehyde, acrolein, and 1,3-butadiene (CARB 2022b). CARB classified "particulate emissions from diesel-fueled engines" (i.e., DPM) as a TAC in August 1998 (17 CCR 93000). DPM is emitted from a broad range of diesel engines: on-road diesel engines of trucks, buses, and cars and off-road diesel engines including locomotives, marine vessels, and heavy-duty construction equipment, among others. Approximately 70% of all airborne cancer risk in California is associated with DPM (CARB 2000). To reduce the cancer risk associated with DPM, CARB adopted a diesel risk reduction plan in 2000 (CARB 2000). Because it is part of $PM_{2.5}$, DPM also contributes to the same non-cancer health effects as $PM_{2.5}$ exposure. These effects include premature death; hospitalizations and emergency department visits for exacerbated chronic heart and lung disease, including asthma; increased respiratory symptoms; and decreased lung function in children. Several studies suggest that exposure to DPM may also facilitate development of new allergies (CARB 2022b). Those most vulnerable to non-cancer health effects are children whose lungs are still developing and the elderly who often have chronic health problems.

Odorous Compounds. Odors are generally regarded as an annoyance rather than a health hazard. Manifestations of a person's reaction to odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting and headache). The ability to detect odors varies considerably among the population and overall is quite subjective. People may have different reactions to the same odor. An odor that is offensive to one person may be perfectly acceptable to another (e.g., coffee roaster). An unfamiliar odor is more easily detected and is more likely to cause complaints than a familiar one. In a phenomenon known as odor fatigue, a person can become desensitized to almost any odor, and recognition may only occur with an alteration in the intensity. The occurrence and severity of odor impacts depend on the nature, frequency, and intensity of the source; wind speed and direction; and the sensitivity of receptors.

Valley Fever. Coccidioidomycosis, more commonly known as "Valley Fever," is an infection caused by inhalation of the spores of the *Coccidioides immitis* fungus, which grows in the soils of the southwestern United States. The fungus is very prevalent in the soils of California's San Joaquin Valley, particularly in Kern County. Kern County is considered a highly endemic county (i.e., more than 20 cases annually of Valley Fever per 100,000 people) based on the incidence rates reported through 2016 (California Department of Public Health 2017). The ecologic factors that appear to be most conducive to survival and replication of the spores are high summer temperatures, mild winters, sparse rainfall, and alkaline, sandy soils.

San Diego County (County) is not considered a highly endemic region for Valley Fever, as the latest report from the County of San Diego Health and Human Services Agency Public Health Services indicated the County has 8.3 cases per 100,000 people (County of San Diego 2019). In the zip code area of the Project site, the case rate is reported as 3.5 cases per 100,000 people (County of San Diego 2021).

2.2 Regulatory Setting

2.2.1 Federal

2.2.1.1 Criteria Pollutants

The federal Clean Air Act (CAA), passed in 1970 and last amended in 1990, forms the basis for the national air pollution control effort. The EPA is responsible for implementing most aspects of the CAA, including the setting of National Ambient Air Quality Standards (NAAQS) for major air pollutants, hazardous air pollutant (HAP) standards, approval of state attainment plans, motor vehicle emission standards, stationary source emission standards and permits, acid rain control measures, stratospheric O_3 protection, and enforcement provisions.

NAAQS are established by the EPA for "criteria pollutants" under the CAA, which are O_3, CO, NO_2, SO_2, PM_{10}, $PM_{2.5}$, and lead. The NAAQS describe acceptable air quality conditions designed to protect the health and welfare of the citizens of the nation. The CAA requires the EPA to reassess the NAAQS at least every 5 years to determine whether adopted standards are adequate to protect public health based on current scientific evidence. States with areas that exceed the NAAQS must prepare a state implementation plan (SIP) that demonstrates how those areas will attain the standards within mandated time frames.

2.2.1.2 Hazardous Air Pollutants

The 1977 CAA Amendments required the EPA to identify national emission standards for hazardous air pollutants to protect the public health and welfare. HAPs include certain volatile organic chemicals, pesticides, herbicides, and radionuclides that present a tangible hazard, based on scientific studies of exposure to humans and other mammals. Under the 1990 CAA Amendments, which expanded the control program for HAPs, 189 substances and chemical families were identified as HAPs.

2.2.2 State

2.2.2.1 Criteria Pollutants

The California Clean Air Act was adopted in 1988 and establishes the state's air quality goals, planning mechanisms, regulatory strategies, and standards of progress. Under the California Clean Air Act, the task of air

quality management and regulation has been legislatively granted to CARB, with subsidiary responsibilities assigned to air quality management districts and air pollution control districts at the regional and county levels. CARB is responsible for ensuring implementation of the California Clean Air Act, responding to the federal CAA, and regulating emissions from motor vehicles and consumer products. Pursuant to the authority granted to it, CARB has established California Ambient Air Quality Standards (CAAQS), which are generally more restrictive than the NAAQS.

The NAAQS and CAAQS are presented in Table 1.

Table 1. Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards[a]	National Standards[b]	
		Concentration[c]	Primary[c,d]	Secondary[c,e]
O_3	1 hour	0.09 ppm (180 µg/m³)	—	Same as primary standard[f]
	8 hours	0.070 ppm (137 µg/m³)	0.070 ppm (137 µg/m³)[f]	
NO_2[g]	1 hour	0.18 ppm (339 µg/m³)	0.100 ppm (188 µg/m³)	Same as primary standard
	Annual arithmetic mean	0.030 ppm (57 µg/m³)	0.053 ppm (100 µg/m³)	
CO	1 hour	20 ppm (23 mg/m³)	35 ppm (40 mg/m³)	None
	8 hours	9.0 ppm (10 mg/m³)	9 ppm (10 mg/m³)	
SO_2[h]	1 hour	0.25 ppm (655 µg/m³)	0.075 ppm (196 µg/m³)	—
	3 hours	—	—	0.5 ppm (1,300 µg/m³)
	24 hours	0.04 ppm (105 µg/m³)	0.14 ppm (for certain areas)[g]	—
	Annual	—	0.030 ppm (for certain areas)[g]	—
PM_{10}[i]	24 hours	50 µg/m³	150 µg/m³	Same as primary standard
	Annual arithmetic mean	20 µg/m³	—	
$PM_{2.5}$[i]	24 hours	—	35 µg/m³	Same as primary standard
	Annual arithmetic mean	12 µg/m³	12.0 µg/m³	15.0 µg/m³
Lead[j, k]	30-day average	1.5 µg/m³	—	—
	Calendar quarter	—	1.5 µg/m³ (for certain areas)[k]	Same as primary standard
	Rolling 3-month average	—	0.15 µg/m³	
Hydrogen sulfide	1 hour	0.03 ppm (42 µg/m³)	—	—
Vinyl chloride[j]	24 hours	0.01 ppm (26 µg/m³)	—	—
Sulfates	24- hours	25 µg/m³	—	—

Table 1. Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards[a]	National Standards[b]	
		Concentration[c]	Primary[c,d]	Secondary[c,e]
Visibility reducing particles	8 hour (10:00 a.m. to 6:00 p.m. PST)	Insufficient amount to produce an extinction coefficient of 0.23 per kilometer due to the number of particles when the relative humidity is less than 70%	—	—

Source: CARB 2016.

Notes: O_3 = ozone; ppm = parts per million by volume; µg/m³ = micrograms per cubic meter; NO_2 = nitrogen dioxide; CO = carbon monoxide; mg/m³= milligrams per cubic meter; SO_2 = sulfur dioxide; PM_{10} = particulate matter with an aerodynamic diameter less than or equal to 10 microns; $PM_{2.5}$ = particulate matter with an aerodynamic diameter less than or equal to 2.5 microns.

[a] California standards for O_3, CO, SO_2 (1-hour and 24-hour), NO_2, suspended particulate matter (PM_{10}, $PM_{2.5}$), and visibility-reducing particles are values that are not to be exceeded. All others are not to be equaled or exceeded. CAAQS are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

[b] National standards (other than O_3, NO_2, SO_2, particulate matter, and those based on annual averages or annual arithmetic mean) are not to be exceeded more than once per year. The O_3 standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over 3 years, is equal to or less than the standard. For PM_{10}, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m³ is equal to or less than 1. For $PM_{2.5}$, the 24-hour standard is attained when 98% of the daily concentrations, averaged over 3 years, are equal to or less than the standard.

[c] Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based on a reference temperature of 25°Celsius (°C) and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

[d] National Primary Standards: The levels of air quality necessary, with an adequate margin of safety, to protect the public health.

[e] National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

[f] On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

[g] To attain the national 1-hour standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 parts per billion (ppb). Note that the national 1-hour standard is in units of ppb. California standards are in units of ppm. To directly compare the national 1-hour standard to the California standards, the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

[h] On June 2, 2010, a new 1-hour SO_2 standard was established, and the existing 24-hour and annual primary standards were revoked. To attain the national 1-hour standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until 1 year after an area is designated for the 2010 standard, except that in areas designated nonattainment of the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

[i] On December 14, 2012, the national annual $PM_{2.5}$ primary standard was lowered from 15 µg/m³ to 12.0 µg/m³. The existing national 24-hour $PM_{2.5}$ standards (primary and secondary) were retained at 35 µg/m³, as was the annual secondary standard of 15 µg/m³. The existing 24-hour PM_{10} standards (primary and secondary) of 150 µg/m³ were also retained. The form of the annual primary and secondary standards is the annual mean averaged over 3 years.

[j] CARB has identified lead and vinyl chloride as TACs with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

[k] The national standard for lead was revised on October 15, 2008, to a rolling 3-month average. The 1978 lead standard (1.5 µg/m³ as a quarterly average) remains in effect until 1 year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

Ambient Air Quality Monitoring Data

SDAPCD operates a network of ambient air monitoring stations throughout the County, which measure ambient concentrations of pollutants and determine whether the ambient air quality meets the CAAQS and the NAAQS. SDAPCD monitors air quality conditions at 10 locations throughout the basin. The Camp Pendleton monitoring

station represents the closest monitoring station to the Project site for concentrations for O_3, $PM_{2.5}$, and NO_2. The Escondido monitoring station is the closest monitoring station for CO. The closest monitoring station for SO_2 and PM_{10} is the El Cajon monitoring station. Ambient concentrations of pollutants from 2019 through 2021 are presented in Table 2.

Table 2. Local Ambient Air Quality Data

Monitoring Station	Unit	Averaging Time	Agency/ Method	Ambient Air Quality Standard	Measured Concentration by Year			Exceedances by Year		
					2019	2020	2021	2019	2020	2021
Ozone (O_3)										
Camp Pendleton	ppm	Maximum 1-hour concentration	State	0.09	0.075	0.094	0.074	0	0	0
	ppm	Maximum 8-hour concentration	State	0.070	0.065	0.074	0.059	0	3	0
			Federal	0.070	0.064	0.074	0.059	0	3	0

Camp Pendleton	µg/m³	Maximum 24-hour concentration	Federal	35	13.8	61.1	20.7	0 (0)	0 (0)	0 (0)
	µg/m³	Annual concentration	State	12	—	—	—	—	—	—
			Federal	12.0	—	—	9.5	—	—	—

Sources: CARB 2022c; EPA 2022a.

Notes: ppm = parts per million; — = not available or applicable; µg/m³ = micrograms per cubic meter; ND = insufficient data available to determine the value.

Data taken from CARB iADAM (http://www.arb.ca.gov/adam) and EPA AirData (http://www.epa.gov/airdata/) represent the highest concentrations experienced over a given year.

Exceedances of federal and state standards are only shown for O_3 and particulate matter. Daily exceedances for particulate matter are estimated days because PM_{10} and $PM_{2.5}$ are not monitored daily. All other criteria pollutants did not exceed federal or state standards during the years shown. There is no federal standard for 1-hour O_3, annual PM_{10}, or 24-hour SO_2, nor is there a state 24-hour standard for $PM_{2.5}$.

The Camp Pendleton monitoring station is located at 21441-W B Street, Oceanside, California.

The Escondido monitoring station is located at 600 East Valley Pkwy, Escondido, California.

The El Cajon monitoring station is located at 10537 Floyd Smith Drive, El Cajon, California.

The San Diego – Rancho Carmel Drive monitoring station is located at 11403 Rancho Carmel Drive, San Diego, California.

[a] Measurements of PM_{10} and $PM_{2.5}$ are usually collected every 6 days and every 1 to 3 days, respectively. Number of days exceeding the standards is a mathematical estimate of the number of days concentrations would have been greater than the level of the standard had each day been monitored. The numbers in parentheses are the measured number of samples that exceeded the standard.

SDAB Attainment Designation

Pursuant to the 1990 CAA Amendments, EPA classifies air basins (or portions thereof) as "attainment" or "nonattainment" for each criteria air pollutant, based on whether the NAAQS have been achieved. Generally, if the recorded concentrations of a pollutant are lower than the standard, the area is classified as "attainment" for that pollutant. If an area exceeds the standard, the area is classified as "nonattainment" for that pollutant. As previously discussed, these standards are set by EPA or CARB for the maximum level of a given air pollutant that can exist in the outdoor air without unacceptable effects on human health or the public welfare. If there is not enough data available to determine whether the standard is exceeded in an area, the area is designated as "unclassified" or "unclassifiable."

The designation of "unclassifiable/attainment" means that the area meets the standard or is expected to be meet the standard despite a lack of monitoring data. Areas that achieve the standards after a nonattainment designation are redesignated as maintenance areas and must have approved maintenance plans to ensure continued attainment of the standards. The California Clean Air Act, like its federal counterpart, called for the designation of areas as "attainment" or "nonattainment," but based on the CAAQS rather than the NAAQS.

Table 3 summarizes SDAB's federal and state attainment designations for each of the criteria pollutants.

Table 3. SDAB Attainment Designation

Pollutant	Federal Designation	State Designation
O_3 (8-hour)	**Nonattainment**	**Nonattainment**
O_3 (1-hour)	Attainment[a]	**Nonattainment**
CO	Attainment	Attainment
PM_{10}	Unclassifiable[b]	**Nonattainment**
$PM_{2.5}$	Attainment	**Nonattainment**[c]
NO_2	Attainment	Attainment
SO_2	Attainment	Attainment
Lead	Attainment	Attainment
Sulfates	(No federal standard)	Attainment
Hydrogen sulfide	(No federal standard)	Unclassified
Visibility-reducing particles	(No federal standard)	Unclassified
Vinyl chloride	(No federal standard)	No designation

Sources: SDAPCD 2022b
Definitions: attainment = meets the standards; nonattainment = does not meet the standards; unclassified or unclassifiable = insufficient data to classify
Notes: SDAB = San Diego; O_3 = ozone; CO = carbon monoxide; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; NO_2 = nitrogen dioxide; SO_2 = sulfur dioxide.

[a] The federal 1-hour standard of 0.12 parts per million (ppm) was in effect from 1979 through June 15, 2005. The revoked standard is referenced here because it was employed for such a long period and because this benchmark is addressed in SIPs.

[b] At the time of designation, if the available data does not support a designation of attainment or nonattainment, the area is designated as unclassifiable.

[c] CARB has not reclassified the region to attainment yet due to (1) incomplete data, and (2) the use of non-California Approved Samplers (CAS). While data collected does meet the requirements for designation of attainment with federal $PM_{2.5}$ standards, the data completeness requirements for state $PM_{2.5}$ standards substantially exceed federal requirements and mandates, and have historically not been feasible for most air districts to adhere to given local resources. APCD has begun replacing most regional filter-based $PM_{2.5}$ monitors as they reach the end of their useful life with continuous $PM_{2.5}$ air monitors to ensure collected data meets stringent completeness requirements in the future. APCD anticipates these new monitors will be approved as "CAS" monitors once CARB review the list of approved monitors, which has not been updated since 2013.

2.2.2.2 Toxic Air Contaminants

The state Air Toxics Program was established in 1983 under AB 1807 (Tanner). The California TAC list identifies more than 700 pollutants, of which carcinogenic and noncarcinogenic toxicity criteria have been established for a subset of these pollutants pursuant to the California Health and Safety Code. In accordance with AB 2728, the state list includes the (federal) HAPs. The Air Toxics "Hot Spots" Information and Assessment Act of 1987 (AB 2588) seeks to identify and evaluate risk from air toxics sources; however, AB 2588 does not regulate air toxics emissions. TAC emissions from individual facilities are quantified and prioritized. "High-priority" facilities are required to perform a health risk assessment (HRA), and if specific thresholds are exceeded, are required to communicate the results to the public in the form of notices and public meetings.

In 2000, CARB approved a comprehensive Diesel Risk Reduction Plan to reduce diesel emissions from both new and existing diesel-fueled vehicles and engines. The regulation was anticipated to result in an 80% decrease in statewide diesel health risk in 2020 compared with the diesel risk in 2000. Additional regulations apply to new trucks and diesel fuel, including the On-Road Heavy Duty Diesel Vehicle (In-Use) Regulation, the On-Road Heavy Duty (New) Vehicle Program, the In-Use Off-Road Diesel Vehicle Regulation, and the New Off-Road Compression-Ignition (Diesel) Engines and Equipment program. All of these regulations and programs have timetables by which manufacturers must comply and existing operators must upgrade their diesel powered equipment. Several Airborne Toxic Control Measures that reduce diesel emissions including In-Use Off-Road Diesel-Fueled Fleets (13 CCR 2449 et seq.) and In-Use On-Road Diesel-Fueled Vehicles (13 CCR 2025).

California Health and Safety Code Section 41700

Section 41700 of the Health and Safety Code states that a person shall not discharge from any source whatsoever quantities of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or that endanger the comfort, repose, health, or safety of any of those persons or the public, or that cause, or have a natural tendency to cause, injury or damage to business or property. This section also applies to sources of objectionable odors.

2.2.3 Local

2.1.7.1 San Diego Air Pollution Control District

While CARB is responsible for the regulation of mobile emission sources within the state, local air quality management districts and air pollution control districts are responsible for enforcing standards and regulating stationary sources. The Project site is located within the SDAB and is subject to the guidelines and regulations of SDAPCD.

In San Diego County, O_3 and particulate matter are the pollutants of main concern, since exceedances of CAAQS for those pollutants are experienced here in most years. For this reason, the SDAB has been designated as a nonattainment area for the state PM_{10}, $PM_{2.5}$, and O_3 standards. The SDAB is also a federal O_3 attainment (maintenance) area for 1997 8-hour O_3 standard, a O_3 nonattainment area for the 2008 8-hour O_3 standard, and a CO maintenance area (western and central part of the SDAB only). The Project area is in the CO maintenance area.

2.1.7.2 Federal Attainment Plans

SDAPCD has prepared the 2020 Plan for Attaining the National Ambient Air Quality Standards for Ozone in San Diego County (2020 Attainment Plan) that demonstrates how the region will further reduce air pollutant emissions to attain the current NAAQS for ozone. The 2020 Attainment Plan was approved by the SDAPCD on October 14, 2020. On November 19, 2020, CARB adopted the 2020 Attainment Plan for attaining the Federal 8-hour 75 ppb and 70 ppb Ozone standards and projects attainment for the standards by 2026 and 2032, respectively (SDAPCD 2020a). The 2020 Attainment Plan will be submitted to the EPA as a revision to the California State Implementation Plan (SIP) for attaining the ozone NAAQS.

In December 2016, the SDAPCD adopted an update to the Eight-Hour Ozone Attainment Plan for San Diego County (2008 O_3 NAAQS). The 2016 Final Eight-Hour Ozone Attainment Plan for San Diego County indicates that local controls and state programs would allow the region to reach attainment of the federal 8-hour O_3 standard (1997 O_3 NAAQS) by 2018 (SDAPCD 2016b). In this plan, SDAPCD relies on the Regional Air Quality Strategy (RAQS) to demonstrate how the region will comply with the federal O_3 standard. The RAQS details how the region will manage and reduce O_3 precursors (NO_x and VOCs) by identifying measures and regulations intended to reduce these pollutants. The control measures identified in the RAQS generally focus on stationary sources; however, the emissions inventories and projections in the RAQS address all potential sources, including those under the authority of CARB and EPA. Incentive programs for reduction of emissions from heavy-duty diesel vehicles, off-road equipment, and school buses are also established in the RAQS.

Currently, the County is designated as moderate nonattainment for the 2008 O_3 NAAQS and maintenance for the 1997 O_3 NAAQS. As documented in the 2016 Final Eight-Hour Ozone Attainment Plan for San Diego County, the County has a likely chance of obtaining attainment due to the transition to low emission cars, stricter new source review rules, and continuing the requirement of general conformity for military growth and the San Diego International Airport. SDAPCD will also continue emission control measures including ongoing implementation of existing regulations in ozone precursor reduction to stationary and area-wide sources, subsequent inspections of facilities and sources, and the adoption of laws requiring Best Available Retrofit Control Technology for control of emissions (SDAPCD 2016b).

2.1.7.3 State Attainment Plans

SDAPCD and the SANDAG are responsible for developing and implementing the clean air plan for attainment and maintenance of the ambient air quality standards in the SDAB. The RAQS for the SDAB was initially adopted in 1991 and is updated every 3 years. The RAQS outlines SDAPCD's plans and control measures designed to attain the CAAQS for O_3. The RAQS relies on information from CARB and SANDAG, including mobile and area source emissions, as well as information regarding projected growth in the County and the cities in the County, to forecast future emissions and then determine from that the strategies necessary for the reduction of emissions through regulatory controls. The CARB mobile source emission projections and SANDAG growth projections are based on population, vehicle trends, and land use plans developed by the County and the cities in the County as part of the development of their general plans (SANDAG 2020, 2021).

On March 9, 2023, SDAPCD adopted the 2022 Regional Air Quality Strategy (RAQS). The RAQS plan demonstrates how the San Diego region will further reduce air pollution emissions to meet state health-based standards for ground-level O_3. The 2022 RAQS guides the SDAPCD in deploying tools, strategies, and resources to continue reducing pollutants that are precursors to ground-level O_3, including NO_x and VOC. The 2022 RAQS emphasizes O_3

control measures but also identifies complementary measures and strategies that can reduce emissions of Greenhouse Gases (GHGs) and PM. It also includes new analyses exploring O_3 and its relationship to public health, mobile sources, under-resourced communities, and GHGs and climate change. Further, the 2022 RAQS identifies strategies to expand SDAPCD regional partnerships, identify more opportunities to engage the public and communities of concern, and integrate environmental justice and equity across all proposed measures and strategies.

In regard to particulate matter emissions reduction efforts, in December 2005, SDAPCD prepared a report titled "Measures to Reduce Particulate Matter in San Diego County" to address implementation of Senate Bill 656 in San Diego County (Senate Bill 656 required additional controls to reduce ambient concentrations of PM10 and PM2.5) (SDAPCD 2005). In the report, SDAPCD evaluated the implementation of source-control measures that would reduce particulate matter emissions associated with residential wood combustion; various construction activities including earthmoving, demolition, and grading; bulk material storage and handling; carryout and trackout removal and cleanup methods; inactive disturbed land; disturbed open areas; unpaved parking lots/staging areas; unpaved roads; and windblown dust (SDAPCD 2005).

2.1.7.4 SDAPCD Rules and Regulations

As stated previously, SDAPCD is responsible for planning, implementing, and enforcing federal and state ambient standards in the SDAB. The following rules and regulations apply to all sources in the jurisdiction of SDAPCD:

- **SDAPCD Regulation IV: Prohibitions; Rule 50: Visible Emissions.** Prohibits any activity causing air contaminant emissions darker than 20% opacity for more than an aggregate of 3 minutes in any consecutive 60-minute time period. In addition, Rule 50 prohibits any diesel pile-driving hammer activity causing air contaminant emissions for a period or periods aggregating more than 4 minutes during the driving of a single pile (SDAPCD 1997).
- **SDAPCD Regulation IV: Prohibitions; Rule 51: Nuisance.** Prohibits the discharge, from any source, of such quantities of air contaminants or other materials that cause or have a tendency to cause injury, detriment, nuisance, annoyance to people and/or the public, or damage to any business or property (SDAPCD 1976).
- **SDAPCD Regulation IV: Prohibitions; Rule 55: Fugitive Dust.** Regulates fugitive dust emissions from any commercial construction or demolition activity capable of generating fugitive dust emissions, including active operations, open storage piles, and inactive disturbed areas, as well as track-out and carry-out onto paved roads beyond a project site (SDAPCD 2009b).
- **SDAPCD Regulation IV: Prohibitions; Rule 67.0.1: Architectural Coatings.** Requires manufacturers, distributors, and end users of architectural and industrial maintenance coatings to reduce VOC emissions from the use of these coatings, primarily by placing limits on the VOC content of various coating categories (SDAPCD 2015).

2.3 Significance Criteria and Methodology

2.3.1 Thresholds of Significance

The State of California has developed guidelines to address the significance of air quality impacts based on Appendix G of the CEQA Guidelines (14 CCR 15000 et seq.), which provides guidance that a project would have a significant environmental impact if it would:

1. Conflict with or obstruct implementation of the applicable air quality plan.
2. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard.
3. Expose sensitive receptors to substantial pollutant concentrations.
4. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

Appendix G of the CEQA Guidelines (14 CCR 15000 et seq.) indicates that, where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to determine whether a project would have a significant impact on air quality.

Appendix G of the CEQA Guidelines (14 CCR 15000 et seq.) indicates that, where available, the significance criteria established by the applicable air quality management district or pollution control district may be relied upon to determine whether the project would have a significant impact on air quality. As discussed earlier, the SDAPCD has not developed thresholds of significance for air quality and health risk, however, the SDAPCD has provided emission levels under its permitting authority for new source review for which an AQIA is triggered. The County of San Diego has reviewed SDAPCD's trigger levels, as well as EPA rulemaking, and CEQA thresholds adopted by the SCAQMD to develop SLTs to assist lead agencies in determining the significance of project-level air quality impacts within the County. The City of Oceanside has chosen to apply the County of San Diego SLT's for determining mass daily criteria air pollutant thresholds of significance. Project related air quality impacts estimated in this environmental analysis would be considered significant if any of the applicable significance thresholds in Table 4 are exceeded.

For CEQA purposes, these screening criteria can be used as numeric methods to demonstrate that the Project's total emissions would or would not result in a significant impact to air quality.

Table 4. Air Quality Significance Thresholds

Construction Emissions	
Pollutant	**Total Emissions (Pounds per Day)**
Coarse particulate matter (PM_{10})	100
Fine particulate matter ($PM_{2.5}$)	55
Oxides of nitrogen (NO_x)	250
Sulfur oxides (SO_x)	250
Carbon monoxide (CO)	550
Volatile organic compounds (VOCs)	75[a]

Table 4. Air Quality Significance Thresholds

Operational Emissions			
	Total Emissions		
Pollutant	Pounds per Hour	Pounds per Day	Tons per Year
Coarse particulate matter (PM_{10})	—	100	15
Fine particulate matter ($PM_{2.5}$)	—	55	10
Oxides of nitrogen (NO_x)	25	250	40
Sulfur oxides (SO_x)	25	250	40
Carbon monoxide (CO)	100	550	100
Lead and lead compounds	—	3.2	0.6
Volatile organic compounds (VOCs)	—	75*	13.7

Source: SDAPCD 2016a.
Notes: SDAPCD = San Diego Air Pollution Control District.
[a] VOC threshold based on the threshold of significance for VOCs from the South Coast Air Quality Management District (SCAQMD) for the Coachella Valley as stated in the San Diego County Guidelines for Determining Significance.

The thresholds listed in Table 4 represent screening-level thresholds that can be used to evaluate whether Project-related emissions would cause a significant impact on air quality. Emissions below the screening-level thresholds would not cause a significant impact. In the event that emissions exceed these thresholds, modeling would be required to demonstrate that the Project's total air quality impacts result in ground-level concentrations that are below the CAAQS and NAAQS, including appropriate background levels. For non-attainment pollutants, if emissions exceed the thresholds shown in Table 4, the Project could have the potential to result in a cumulatively considerable net increase in these pollutants and thus could have a significant impact on the ambient air quality.

SDAPCD Rule 51 (Public Nuisance) prohibits emission of any material that causes nuisance to a considerable number of persons or endangers the comfort, health, or safety of any person (SDAPCD 1976). A project that proposes a use that would produce objectionable odors would be deemed to have a significant odor impact if it would affect a considerable number of off-site receptors.

2.3.2 Approach and Methodology

2.3.2.1 Construction Mass Emissions

Emissions from the construction phase of Project components were estimated using the California Emissions Estimator Model (CalEEMod) Version 2022.1[3]. Per preliminary project details, it is assumed that construction of the Project would begin in January 2024 and would last approximately 21 months. The construction schedule has been developed based on available information provided by the Project applicant, typical construction practices, and CalEEMod default assumptions. Construction phasing is intended to represent a schedule of anticipated activities for use in estimating potential Project-generated construction emissions. Phase 1 of the Project contains demolition, site preparation, grading, utility installation, and paving. Phase 2 of the Project represents the building construction and architectural coating of 80 townhouse units and accompanying landscaping/parking, while

[3] CalEEMod is a statewide land use emissions computer model designed to provide a uniform platform to calculate construction and operational emissions from land use development projects. The model was developed for the California Air Pollution Control Officers Association in collaboration with multiple air districts across the state. Numerous lead agencies in the state, including SDAPCD, use CalEEMod to estimate GHG emissions in accordance with CEQA Guidelines Section 15064.4(a)(1).

Phase 3 represents the construction and painting of the remaining 84 units and landscaping/parking. The approximate construction phasing is as follows:

- Demolition (Phase 1): January 2024 to February 2024 (1 month)
- Site Preparation (Phase 1): February 2024 (2 weeks)
- Grading (Phase 1): February 2024 to March 2024 (1 month)
- Utility Installation (Phase 1): April 2024 to May 2024 (1 month)
- Paving (Phase 1): May 2024 to June 2024 (1 month)
- Building Construction (Phase 2): June 2024 to December 2024 (7 months)
- Architectural Coating (Phase 2): December 2024 to January 2025 (1 month)
- Building Construction (Phase 3): January 2025 to August 2025 (8 months)
- Architectural Coating (Phase 3): September 2025 (1 month)

Table 5 provides the construction equipment mix and vehicle trips assumed for estimating Project-generated construction emissions.

Table 5. Construction Scenario Assumptions

Construction Phase (Duration)	Vehicle Trips			Equipment		
	Average Daily Worker Trips	Average Daily Vendor Truck Trips	Average Daily Haul Truck Trips	Equipment Type	Quantity	Usage Hours
Demolition (Phase 1)	8	2	124	Concrete/Industrial Saws	1	8
				Excavators	1	8
				Rubber Tired Dozers	1	8
Site Preparation (Phase 1)	8	2	0	Rubber Tired Dozers	1	8
				Tractors/Loaders/Backhoes	2	8
Grading (Phase 1)	16	2	0	Graders	1	8
				Rubber Tired Dozers	1	8
				Scrapers	3	8
				Tractors/Loaders/Backhoes	1	8
Utility Installation (Phase 1)	10	2	0	Excavators	2	8
				Tractors/Loaders/Backhoes	2	8
Paving (Phase 1)	14	2	0	Pavers	1	8
				Paving Equipment	1	8
				Rollers	3	8
Building Construction (Phase 2)	120	18	0	Forklifts	3	8
				Generator Sets - electric	1	8
				Tractors/Loaders/Backhoes	3	8
Architectural Coating (Phase 2)	48	2	0	Air Compressors - electric	3	8
	120	18	0	Forklifts	3	8

Table 5. Construction Scenario Assumptions

Construction Phase (Duration)	Vehicle Trips			Equipment		
	Average Daily Worker Trips	Average Daily Vendor Truck Trips	Average Daily Haul Truck Trips	Equipment Type	Quantity	Usage Hours
Building Construction (Phase 3)				Generator Sets - electric	1	8
				Tractors/Loaders/Backhoes	3	8
Architectural Coating (Phase 3)	48	2	0	Air Compressors - electric	3	8

Note: See Appendix A for additional details.

The equipment mix assumptions were based on CalEEMod default assumptions and applicant-provided input based on proposed land use and is meant to represent a reasonably conservative estimate of construction activity. For the analysis, it is generally assumed that heavy construction equipment would be operating at the site for a maximum of 8 hours per day, 5 days per week. In addition, the Project incorporated the use of temporary electric power/electric generators and electric air compressors during the building construction and architectural coating phases, respectively.

Default assumptions provided in CalEEMod were used to determine worker trips and vendor truck trips for each potential construction phase. The default CalEEMod trip distance for construction vehicles was assumed, which was a one-way distance of 12 miles for worker trips, 7.63 miles for vendor truck trips, and 20 miles for haul truck trips.

Implementation of the Project would generate criteria air pollutant emissions from entrained dust, off-road equipment, vehicle emissions, architectural coatings, and asphalt pavement application. Based on project specific information, no net import or export of material is expected during the grading phase. Entrained dust results from the exposure of earth surfaces to wind from the direct disturbance and movement of soil, resulting in PM_{10} and $PM_{2.5}$ emissions. Construction of Project components would be subject to SDAPCD Rule 55 – Fugitive Dust Control. Compliance with Rule 55 would limit fugitive dust (PM_{10} and $PM_{2.5}$) that may be generated during grading and construction activities. Standard construction practices that would be employed to reduce fugitive dust emissions include watering of the active sites two times per day, depending on weather conditions as indicated by PDF-AQ-2.

Internal combustion engines used by construction equipment, vendor trucks (i.e., delivery trucks), haul trucks, and worker vehicles would result in emissions of VOCs, NO_x, CO, PM_{10}, and $PM_{2.5}$. The application of architectural coatings, such as exterior application/interior paint and other finishes, and application of asphalt pavement would also produce VOC emissions; however, the contractor is required to procure architectural coatings from a supplier in compliance with the requirements of SDAPCD Rule 67.0.1 for Architectural Coatings.

For additional details see Appendix A, *Air Quality and Greenhouse Gas Emissions CalEEMod Output Files*.

2.3.2.2 Construction Health Risk Analysis

An HRA was performed to assess the impact of construction on sensitive receptors proximate to the Project site and to onsite residents that may occupy the site while the second phase of building construction is completed. This report includes an HRA associated with emissions from construction of the Project based on the methodologies prescribed in the Office of Environmental Health Hazard Assessment (OEHHA) document, Air Toxics Hot Spots Program

Risk Assessment Guidelines – Guidance Manual for Preparation of Health Risk Assessments (OEHHA Guidelines) (OEHHA 2015). To implement the OEHHA Guidelines based on proposed project information, the SDAPCD has developed a three-tiered approach where each successive tier is progressively more refined, with fewer conservative assumptions. The SDAPCD document, Supplemental Guidelines for Submission of Air Toxics "Hot Spots" Program Health Risk Assessments (SDAPCD 2022), provides guidance with which to perform HRAs within the SDAB.

Health effects from carcinogenic air toxics are usually described in terms of cancer risk. The SDAPCD recommends a carcinogenic (cancer) risk threshold of 10 in one million. Additionally, some TACs increase non-cancer health risk due to long-term (chronic) exposures. The Chronic Hazard Index is the sum of the individual substance chronic hazard indices for all TACs affecting the same target organ system. The SDAPCD recommends a Chronic Hazard Index significance threshold of one (project increment). The exhaust from diesel engines is a complex mixture of gases, vapors, and particles, many of which are known human carcinogens. DPM has established cancer risk factors and relative exposure values for long-term chronic health hazard impacts. No short-term, acute relative exposure level has been established for DPM; therefore, acute impacts of DPM are not addressed in this assessment.

The HRA for the Project evaluated the risk to existing off-site residents from diesel emissions from exhaust from on-site construction equipment and diesel haul and vendor trucks. The HRA also evaluated the risk to potential onsite residents occupying the first phase of buildings while the second phase of construction is completed.

The dispersion modeling of DPM was performed using the American Meteorological Society/EPA Regulatory Model (AERMOD), which is the model SDAPCD requires for atmospheric dispersion of emissions. AERMOD is a steady-state Gaussian plume model that incorporates air dispersion based on planetary boundary layer turbulence structure and scaling concepts, including treatment of surface and elevated sources, building downwash, and simple and complex terrain (EPA 2021). For the Project, AERMOD was run with all sources emitting unit emissions (one gram per second) to obtain the "X/Q" values. X/Q is a dispersion factor that is the average effluent concentration normalized by source strength and is used as a way to simplify the representation of emissions from many sources. The X/Q values of ground-level concentrations were determined for construction emissions using AERMOD and the maximum concentrations determined for the one-hour and period-averaging periods. Principal parameters of this modeling are presented in Table 6.

Table 6. AERMOD Principal Parameters

Parameter	Details
Meteorological Data	The latest three-year meteorological data (2019-2021) for the McClellan-Palomar Airport Station were obtained from SDAPCD as the recommended meteorological station and input to AERMOD.
Urban versus Rural Option	Urban areas typically have more surface roughness, as well as structures and low-albedo surfaces that absorb more sunlight—and thus more heat—relative to rural areas. Per the SDAPCD guidelines, the land use procedure from 4.4.1 of the OEHHA Guidance Manual indicated that urban dispersion was appropriate for the project site.
Terrain Characteristics	The elevation of the modeled site is about 92 meters above sea level. Digital elevation model files were imported into AERMOD so that complex terrain features were evaluated as appropriate.
Elevation Data	Digital elevation data were imported into AERMOD, and elevations were assigned to the emission sources and receptors. Digital elevation data were obtained through AERMOD

Table 6. AERMOD Principal Parameters

Parameter	Details
	View in the U.S. Geological Survey's National Elevation Dataset format with a 10-meter resolution.
Emission Sources and Release Parameters	Air dispersion modeling of DPM from construction equipment was conducted using emissions estimated using CalEEMod, assuming emissions would occur eight hours per day, five days per week. Vendor and hauling trips were modified to account only for emissions occurring within 1,320 ft of the project site. The Project area was modeled as a series of adjacent line-volume sources. The line of adjacent volume sources was assumed to have a release height of 5 meters, a plume height of 10 meters, and a plume width of 10 meters (SCAQMD 2008).
Receptors	The HRA evaluates the risk to existing off-site and future on-site sensitive receptors located in proximity to the Project Site. For the off-site receptors, a uniform fine 1.0 by 1.0-kilometer (0.62- by 0.62-mile) Cartesian grid with 20-meter (66-foot) spacing was centered over the Project Site and converted into discrete receptors to capture the maximum point of impact. For the on-site receptors, discrete receptors were added to the project site to account for residential units in Buildings 2, 9-15, 16, 18, 19, 20, 23, 24 of the site plan.

Notes: AERMOD = American Meteorological Society/EPA Regulatory Model; SDAPCD = San Diego Air Pollution Control District; DPM = diesel particulate matter; CalEEMod = California Emissions Estimator Model.
See Appendix B for additional information.

Dispersion model plot files from AERMOD were then imported into CARB's Hotspots Analysis and Reporting Program Version 2 (Version 21118) to determine health risk, which requires peak one-hour emission rates and annual emission rates for all pollutants for each modeling source. For the offsite residential health risk, the HRA assumes exposure would start in the third trimester of pregnancy for a duration of 20 months. For the onsite residential risk, the HRA assumes exposure would start in the third trimester of pregnancy for a duration of 8 months. A construction HRA CalEEMod run was performed to estimate on-site emissions of exhaust PM_{10}, which was used as a surrogate for DPM.[4] The predominant source of construction exhaust PM_{10} is operation of off-road diesel construction equipment. However, it was conservatively assumed that emissions from heavy-duty haul and vendor trucks, which could be diesel- or gasoline-fueled, traveling 0.25 miles would occur on site to represent potential on-site travel and nearby local off-site travel. Total exhaust PM_{10} emissions from CalEEMod were averaged over the Project's construction duration to estimate the annual and hourly exposure, which were estimated to be 69.87 pounds per year and 0.03 pounds per hour of DPM for offsite receptors and 9.16 pounds per year and 0.004 pounds per hour of DPM for onsite receptors. Construction emissions for the onsite receptors were adjusted to reflect the use of MERV13 filters pursuant to the Title 24 Building Code (as of the 2019 standards).

2.3.2.3 Operation

Operation of the proposed Project would generate VOC, NO_x, CO, SO_x, PM_{10}, and $PM_{2.5}$ emissions from area sources, energy sources and mobile sources, which are discussed below. Emissions from these sources were estimated

[4] Under California regulatory guidelines, DPM is used as a surrogate measure of carcinogen exposure for the mixture of chemicals that make up diesel exhaust as a whole. The California Environmental Protection Agency has concluded that "potential cancer risk from inhalation exposure to whole diesel exhaust will outweigh the multi-pathway cancer risk from the speciated components" (OEHHA 2003).

based on CalEEMod default assumptions for operations of the Project land uses. It was assumed that the project would be fully operational following the completion of construction, which would occur in 2026.

Area

The area source category calculates direct sources of air pollutant emissions located at the Project site, including consumer product use, architectural coatings, and landscape maintenance equipment. CalEEMod defaults were used to estimate emissions from area sources during operation of the Project. The project includes PDF-AQ-1 that prohibits wood-burning, and natural gas-fired fireplaces in residential units.

Consumer products are various solvents used in non-industrial applications which emit VOCs during their product use. These typically include cleaning supplies, kitchen aerosols, cosmetics and toiletries. Consumer product VOC emissions are estimated in CalEEMod based on the floor area of residential and nonresidential buildings and on the default factor of pounds of VOC per building square foot per day. For parking lot land uses, CalEEMod estimates VOC emissions associated with use of parking surface degreasers based on a square footage of parking surface area and pounds of VOC per square foot per day. The CalEEMod default utilization rates and emission factors were assumed.

This VOC emissions associated with the reapplication rate and coating for each building surface type and parking surface was also estimated using CalEEMod. The reapplication rate is the percentage of the total surface area that is repainted each year. A default of 10% is used, meaning that 10% of the surface area is repainted each year (i.e., all surface areas are repainted once every 10 years). Daily emissions divide the annual rate by 365 days per year. It was assumed that the Project would comply with SDAPCD Rule 67.0.1 for Architectural Coatings.

Landscape maintenance includes fuel combustion emissions from equipment such as lawn mowers, rototillers, shredders/grinders, blowers, trimmers, chainsaws, and hedge trimmers, as well as air compressors, generators, and pumps. The emissions associated from landscape equipment use were estimated using CalEEMod. The emission factors are multiplied by the number of summer days that represent the number of operational days.

Energy

As represented in CalEEMod, energy sources include emissions associated with natural gas usage. Electricity use would contribute indirectly to criteria air pollutant emissions; however, the emissions from electricity use are only quantified for GHGs in CalEEMod, since criteria pollutant emissions occur at the site of the power plant, which is typically off site. CalEEMod default values for energy consumption for each land use were applied for the Project analysis. The energy use from residential land uses is calculated in CalEEMod based on the Residential Appliance Saturation Survey. Energy use from the non-residential land uses is based on various studies and assessments as described in Section 7.3, *Estimating Energy Use from Other Land Uses*, of Appendix A of the CalEEMod User's Guide (CAPCOA 2021).

Mobile Sources (Motor Vehicles)

Following the completion of construction activities, the Project would generate VOC, NO_x, CO, SO_x, PM_{10}, and $PM_{2.5}$ emissions from mobile sources (vehicular traffic) as a result of the 323 additional residential units. The CalEEMod Version 2020.4.0 was used to estimate daily emissions from proposed vehicular sources in combination with trip rates provided in the Local Transportation Study prepared for the Project (CR Associates 2022). CalEEMod default data, including trip characteristics, variable start information, emissions factors, and trip distances, were used for

the model inputs. Emission factors representing the vehicle mix and emissions for 2026 were used to estimate emissions associated with vehicular sources.

For additional details see Appendix A, *Air Quality and Greenhouse Gas Emissions CalEEMod Output Files*.

2.4 Impact Analysis

2.4.1 Would the Project conflict with or obstruct implementation of the applicable air quality plan?

2.4.1.1 Analysis

As stated in Section 2.2.3, Local, SDAPCD and SANDAG are responsible for developing and implementing the clean air plans for attainment and maintenance of the NAAQS and CAAQS in the SDAB; specifically, the SIP and RAQS.[5] The federal O_3 maintenance plan, which is part of the SIP, was adopted in 2016. The SIP includes a demonstration that current strategies and tactics will maintain acceptable air quality in the SDAB based on the NAAQS. The RAQS was initially adopted in 1991 and is updated every 3 years (most recently in 2016). The RAQS outlines SDAPCD's plans and control measures designed to attain the CAAQS for O_3. The SIP and RAQS rely on information from CARB and SANDAG, including mobile and area source emissions, as well as information regarding projected growth in San Diego County and the cities in the County, to project future emissions and then determine from that the strategies necessary for the reduction of emissions through regulatory controls. CARB mobile source emission projections and SANDAG growth projections are based on population, vehicle trends, and land use plans developed by San Diego County and the cities in the County as part of the development of their general plans.

If a project proposes development that is greater than that anticipated in the local plan and SANDAG's growth projections, the project might conflict with the SIP and RAQS and may contribute to a potentially significant cumulative impact on air quality.

The City of Oceanside General Plan identifies the site as Civic Institution (CI) and the project site is zoned Civic/ Public (PS). The existing land use designation and zoning allows for few permitted uses, with most uses requiring a use permit. The type of use is focused on public uses, such as hospitals, government offices and schools. The project would include a General Plan Amendment to revise the land use designation from CI to Medium Density Residential-B (MDB-R). A Zone Amendment is also proposed to revise the current zoning from PS to Planned Development (PD), with the Pacifica Planned Development Plan serving as the regulating document. The Pacifica Planned Development Plan would result in the development of 164 multi-family residential units.

One measure of determining development consistency is focused on development intensity and attributes such as vehicle trips and vehicle miles travelled, which directly correlate to increases in criteria air pollutants. Based on the City's development code, the CI designation would allow for greater development intensity based on generation of more vehicle trips and vehicle miles traveled as shown in Table 7, below. As such, the Project would result in less criteria air pollutant emissions, and thus less intensive uses, than development allowed under the existing CI designation.

[5] For the purpose of this discussion, the relevant federal air quality plan is the O_3 maintenance plan (SDAPCD 2016b). The RAQS is the applicable plan for purposes of state air quality planning. Both plans reflect growth projections in the SDAB.

Table 7. Development Intensity Comparison

Development	Land Use Developed	Residents	Employees	Total Vehicle Trips Per Year	Vehicle Miles Traveled
Proposed Project	164 multi-family residential units	469	0	467,200	4,458,040
Existing General Plan Land Use Designation (CI) and Zoning (PS)	Hospital (100 beds)	0	125	720,823	5,644,989
	Government Office (150)	—	250	883,430	6,918,419
	Highschool (1,000 students)	0	91	572,529	4,483,650

Sources: City of Oceanside General Plan, 2002, City of Oceanside Municipal Code 2022, EIA 2012

Another measure for determining consistency with development is to evaluate whether the population or employment growth is within previous forecasts. As described above, the SIP and RAQS rely on these growth projections to develop control strategies to meet air quality standards.

SANDAG produces a Regional Growth Forecast, which is important for developing regional plans and strategies mandated by federal and state governments such as the Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS), the Program Environmental Impact Report (EIR) for the RTP/SCS, the Air Quality Management Plan, the Federal Transportation Improvement Program, and the Regional Housing Needs Assessment (RHNA). The most recent RTP/SCS was adopted in December 2021 with a planning horizon of 2016 through 2050. The growth forecasts are appended to the RTP/SCS. Appendix F of the 2021 Regional Plan describes the trends in population, housing, and employment. The San Diego region is expected to grow by nearly 437,000 people and the growth in population will add about 440,000 jobs and more than 280,000 housing units (SANDAG 2021).

The forecast process includes two main phases. The first phase of the forecast is produced using California Department of Finance (DOF) population projections and rates developed by SANDAG based on historic economic and demographic trends. The size and makeup of the working age population in the region and high labor force participation is used to project future job growth. The projected higher values in working age population, coupled with older residents staying in the labor force longer results in more jobs in the region by the end of the forecast period. Housing units and households in the region were forecasted based on rates developed from historical data as well as assumptions of housing unit development and household formation in the future. The second phase of the forecast allocates the forecasted growth down to the jurisdictions and smaller geographical areas. The subregional forecast distributes growth based on a variety of factors, including available capacity for housing and accessibility to jobs and transportation. SANDAG works with the region's 18 cities, the County of San Diego, and other agencies that manage land use to understand local land use plans, such as general plans, community plans, and specific plans, as well as constraints to development and already permitted projects to develop the subregional projections for housing and employment. Table 8 shows the population, housing units, and employment projections for the City and the San Diego region for the 2021 Regional Plan.

Table 8. Population, Housing, and Employment

Year	City of Oceanside			San Diego Region		
	Population	Housing Units	Employment	Population	Housing Units	Employment
2016	176,666	65,851	47,256	3,309,510	1,190,555	1,646,419
2025	178,385	67,816	48,317	3,470,848	1,288,216	1,761,747
2035	184,283	71,359	49,909	3,620,348	1,409,866	1,921,475
2050	184,283	71,359	50,756	3,746,073	1,471,299	2,086,318
Change in Number (2016-2050)	7,617 (4.3%)	5,508 (8.4%)	3,500 (7.4%)	436,563 (14.2%)	280,744 (23.6%)	439,899 (26.7%)

Source: SANDAG Regional Plan 2021, Appendix F: Regional Growth Forecast and Sustainable Communities Strategy Land Use Pattern

As shown above the Project is expected to add 469 residents in 164 dwelling units. The added residents would represent approximately 6% of the anticipated population growth and 3% of the housing growth over the RTP/SCS planning horizon. Based on the above information, the increase in population and housing units would be well within the growth projections.

Furthermore, the most recent Regional Housing Needs Assessment from SANDAG stated that Oceanside needs to build 5,443 units from 2021 through 2029 (SANDAG 2020). The City has an allocation of 1,268 very-low, 718 low income units, 883 moderate and 2,574 above-moderate income units (SANDAG 2020). The Project is expected to bring 164 market-rate dwelling units to market in 2026, which would be within SANDAG's growth projection for housing during the 6th Cycle planning horizon (i.e., April 2021 – April 2029). Therefore, the Project would not conflict with SANDAG's regional growth forecast for the City.

2.4.1.2 Conclusion

The increase in the housing units and associated vehicle source emissions is not anticipated to result in air quality impacts that were not envisioned in the growth projections and RAQS, and the increase in residential units in the region would not obstruct or impede implementation of local air quality plans. Based on the analysis above, implementation of the Project would not result in development in excess of that anticipated in local plans or increases in population/housing growth beyond those contemplated by SANDAG. As such, vehicle trip generation and planned development for the Project are considered to be anticipated in the SIP and RAQS. Because the proposed land uses and associated vehicle trips are anticipated in local air quality plans, the Project would be consistent at a regional level with the underlying growth forecasts in the RAQS. Impacts would be **less than significant**.

2.4.2 Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development, and SDAPCD develops and implements plans for future attainment of the NAAQS and CAAQS. Based on these considerations, project-level thresholds of significance for criteria pollutants are relevant in the determination of whether the Project's individual emissions would have a cumulatively significant impact on air quality.

2.4.2.1 Construction

Construction of the proposed Project would result in the temporary addition of pollutants to the local airshed caused by on-site sources (i.e., off-road construction equipment, soil disturbance, and VOC off-gassing) and off-site sources (vendor and haul truck trips, and worker vehicle trips). Construction emissions can vary substantially day to day, depending on the level of activity, the specific type of operation, and for dust, the prevailing weather conditions.

Criteria air pollutant emissions associated with construction activities were quantified using CalEEMod. Default values provided by the program were used where detailed Project information was not available. A detailed depiction of the construction schedule—including information regarding phasing, equipment used during each phase, haul trucks, vendor trucks, and worker vehicles—is included in Section 2.3.2. above.

Development of the Project would generate air pollutant emissions from entrained dust, off-road equipment, vehicle emissions, asphalt pavement application, and architectural coatings. As described previously, fugitive dust would be limited through compliance with SDAPCD Rule 55, which requires the restriction of visible emissions of fugitive dust beyond the property line. This measure is incorporated into the project PDF-AQ-2.

Table 9 shows the estimated maximum unmitigated daily construction emissions associated with the construction phases of the Project. Complete details of the emissions calculations are provided in Appendix A, *Air Quality and Greenhouse Gas Emissions CalEEMod Output Files*.

Table 9. Estimated Maximum Daily Construction Criteria Air Pollutant Emissions

Construction Year	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	Pounds per Day					
2024	29.4	39.8	33.1	0.08	16.3	5.61
2025	29.3	3.70	10.2	0.01	1.25	0.38
Maximum	**29.4**	**39.8**	**33.1**	**0.08**	**16.3**	**5.61**
County of San Diego threshold	*75*	*250*	*550*	*250*	*100*	*55*
Threshold exceeded?	**No**	**No**	**No**	**No**	**No**	**No**

Notes: VOC = volatile organic compound; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; SDAPCD = San Diego Air Pollution Control District.
See Appendix A for complete results.
The values shown are the maximum summer or winter daily emissions results from CalEEMod and include fugitive dust mitigation (SDAPCD Rule 55)

As shown in Table 10, daily construction emissions for the Project would not exceed the County of San Diego's significance thresholds. Therefore, the Project would have a **less than significant impact** related to emissions of criteria air pollutant emissions during construction.

2.4.2.2 Operations

Operation of the proposed Project would generate VOC, NO_x, CO, SO_x, PM_{10}, and $PM_{2.5}$ emissions from mobile sources (vehicle trips), area sources (consumer products, landscape maintenance equipment), and energy sources. Criteria air pollutant emissions associated with long-term operations were quantified using CalEEMod. Project-generated mobile source emissions were estimated in CalEEMod based on project-specific trip rates. CalEEMod default values were used to estimate emissions from the Project area and energy sources. The project includes a PDF that prohibits all fireplaces. As such, CalEEMod area source emissions were adjusted to show no fireplaces used in residential development.

Table 10 presents the unmitigated maximum daily emissions associated with the operation of the Project in 2026 after all phases of construction have been completed. Complete details of the emissions calculations are provided in Appendix A, *Air Quality and Greenhouse Gas Emissions CalEEMod Output Files*. Emissions represent maximum of summer and winter. "Summer" emissions are representative of the conditions that may occur during the O_3 season (May 1 to October 31), and "winter" emissions are representative of the conditions that may occur during the balance of the year (November 1 to April 30).

Table 10. Estimated Maximum Daily Operational Criteria Air Pollutant Emissions

Source	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	Pounds per Day					
Mobile	2.64	2.13	20.3	0.05	1.72	0.33
Area	9.26	2.88	47.2	0.14	5.46	5.27
Energy	0.05	0.85	0.36	0.01	0.07	0.07
Total	**11.95**	**5.86**	**67.86**	**0.2**	**7.25**	**5.67**
SDAPCD threshold	*75*	*250*	*550*	*250*	*100*	*55*
Threshold exceeded?	**No**	**No**	**No**	**No**	**No**	**No**

Notes: VOC = volatile organic compound; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; SDAPCD = San Diego Air Pollution Control District. <0.01 = reported value is less than 0.01.
See Appendix A for complete results.
The values shown are the maximum summer or winter daily emissions results from CalEEMod.

As shown in Table 10, daily operational emissions for the Project would not exceed SDAPCD's significance thresholds for any criteria air pollutant. Therefore, the Project would result in a **less than significant impact** related to emissions of criteria air pollutant emissions during operation.

2.4.2.3 Conclusion

In analyzing cumulative impacts from a project, the analysis must specifically evaluate the project's contribution to the cumulative increase in pollutants for which the SDAB is designated as nonattainment for the CAAQS and NAAQS. If the project does not exceed thresholds and is determined to have less than significant project-specific impacts, it may still contribute to a significant cumulative impact on air quality if the emissions from the project components, in combination with the emissions from other proposed or reasonably foreseeable future projects, are in excess of established thresholds. However, the project would only be considered to have a significant cumulative impact if its contribution accounts for a significant proportion of the cumulative total emissions (i.e., it represents a "cumulatively considerable contribution" to the cumulative air quality impact).

Additionally, for the SDAB, the RAQS serves as the long-term regional air quality planning document for the purpose of assessing cumulative operational emissions within the basin to ensure the SDAB continues to make progress toward NAAQS and CAAQS attainment status. As such, cumulative projects located in the San Diego region would have the potential to result in a cumulative impact to air quality if, in combination, they would conflict with or obstruct implementation of the RAQS. Similarly, individual projects that are inconsistent with the regional planning documents on which the RAQS is based would have the potential to result in cumulative impacts if they represent development beyond regional projections.

The SDAB has been designated as a federal nonattainment area for O_3 and a state nonattainment area for O_3, PM_{10}, and $PM_{2.5}$. PM_{10} and $PM_{2.5}$ emissions associated with construction generally result in near-field impacts. The nonattainment status is the result of cumulative emissions from all sources of these air pollutants and their precursors within the SDAB. As shown in Tables 10, the emissions of all criteria pollutants from the Project's construction would be below the significance levels. Construction would be short term, temporary in nature, and activities would be considered typical of a residential project. Once construction is completed, construction-related emissions would cease. As shown in Table 11, operational emissions generated by the Project would not result in

emissions that exceed significance thresholds for any criteria air pollutant. As such, the Project would result in less than significant impacts to air quality.

Regarding long-term cumulative operational emissions in relation to consistency with local air quality plans, the SIP and RAQS serve as the primary air quality planning documents for the state and SDAB, respectively. The SIP and RAQS rely on SANDAG growth projections based on population, vehicle trends, and land use plans developed by the cities and by the County as part of the development of their general plans. Therefore, projects that propose development that is consistent with the growth anticipated by local plans would be consistent with the SIP and RAQS and would not be considered to result in cumulatively considerable impacts from operational emissions. As discussed in Section 2.4.1 of this report, the Project is consistent with the SANDAG growth projections. Thus, it would be consistent at a regional level with the underlying growth forecasts in the SIP and RAQS.

As a result, the Project would not result in a cumulatively considerable contribution to regional O_3 concentrations or other criteria pollutant emissions. Cumulative impacts for construction and operation would be **less than significant** for the Project.

2.4.3 Would the Project expose sensitive receptors to substantial pollutant concentrations?

2.4.3.1 Carbon Monoxide Hotspots

Mobile-source impacts occur on two basic scales of motion. Regionally, Project-related travel will add to regional trip generation and increase the vehicle miles traveled within the local airshed and the SDAB. Locally, Project traffic will be added to the City's roadway system. If such traffic occurs during periods of poor atmospheric ventilation, consists of a large number of vehicles "cold-started" and operating at pollution-inefficient speeds, and operates on roadways already crowded with non-Project traffic, there is a potential for the formation of microscale CO "hotspots" in the area immediately around points of congested traffic. Because of continued improvement in mobile emissions at a rate faster than the rate of vehicle growth and/or congestion, the potential for CO hotspots in the basin is steadily decreasing.

Projects contributing to adverse traffic impacts may result in the formation of CO hotspots. To verify that the Project would not cause or contribute to a violation of the CO standard, a screening evaluation of the potential for CO hotspots was conducted. The City does not have guidance regarding CO hotspots; as such, the County's CO hotspot screening guidance (County of San Diego 2007) was followed to determine whether the Project would require a site-specific hotspot analysis. Per guidance, any project that would place receptors within 500 feet of a signalized intersection operating at or below LOS E (peak-hour trips exceeding 3,000 trips) must conduct a "hotspot" analysis for CO. Likewise, projects that will cause road intersections to operate at or below a LOS E (i.e., with intersection peak-hour trips exceeding 3,000) will also have to conduct a CO "hotspot" analysis. The signalized intersection nearest to the project is located at Monica Cir.=cle/Project Drivewa. & Macario Drive. Per the Local Transportation Study prepared for the Project, once the project is constructed, the intersection will be operating at LOS A with Project traffic (Chen Ryan Associates 2022). The intersection of Vandegrift Blvd./ N River Rd. & N Redondo Dr., which is approximately 1,850 feet southeast of the project site, will be operating at LOS E in the AM Peak Hour and LOS F in the PM Peak Hour under both the 2025 and 2050 with Project Conditions. Although this intersection will be operating at LOS E and higher, a CO hotspots would not be expected for the following reasons.

Ambient CO levels are monitored at the Escondido-Rancho Carmel Drive air quality monitoring station, which is approximately 16 miles southeast of the Project Site. Ambient CO levels monitored at this monitoring station are representative of ambient CO concentrations in the Project area and indicate that the highest recorded 1-hour concentration of CO is 4.1 ppm (the State standard is 20 ppm) and highest 8-hour concentration is 2.5 ppm (the State standard is 9 ppm) during the past 3 years of available data (EPA 2022). As discussed above, the highest CO concentrations typically occur during peak traffic hours, so CO impacts calculated under peak traffic conditions represent a worst-case analysis.

Since the last update of the SDAPCD's guidance (2007), the County has evaluated the potential for the growth anticipated under the General Plan Update to result in CO "hot spots" throughout the County (County of San Diego 2009). To do this, the County reviewed the CO "hot spot" analysis conducted by the South Coast Air Quality Management District (SCAQMD) for their request to the USEPA for redesignation as a CO attainment area (SCAQMD 2003). In SCAQMD's analysis, they modeled the four most congested intersections identified in their basin (South Coast Air Basin [SCAB]), which included the following:

- Long Beach Boulevard and Imperial Highway – proximity to the Lynwood monitoring station, which consistently records the highest 8-hour CO concentrations in the SCAB each year.
- Wilshire Boulevard and Veteran Avenue – the most congested intersection in Los Angeles County, with an average daily traffic volume of 100,000 vehicles/day.
- Highland Avenue and Sunset Boulevard – one of the most congested intersections in the City of Los Angeles.
- Century Boulevard and La Cienega Boulevard – one of the most congested intersections in the City of Los Angeles.

The SCAQMD's analysis found that these intersections had an average 7.7 ppm 1-hour CO concentrations predicted by the models, which is only 38.5% of the 1-hour CO CAAQS of 20 ppm. Therefore, even the most congested intersections in SCAQMD's air basin would not experience a CO "hot spot".

The air quality monitoring station closest to the most congested intersection in Los Angeles County (Wilshire Boulevard/Veteran Avenue) is the VA Hospital, West Los Angeles Station (Site ID 060370113) located at Wilshire Boulevard and Sawtelle Boulevard, approximately 0.5 miles to the southwest. Ambient CO levels monitored at this representative monitoring station are outlined in Table 11 for the original analysis year (2002), and for the most recent year of available data (2021). As shown, there is noticeable improvement in background levels of CO since the SCAQMD's regional hotspot analysis.

Table 11. Ambient Carbon Monoxide Concentrations for SCAQMD's Most Congested Intersection

Year	CO Concentration (ppm)	
	Maximum 1-hour	Maximum 8-hour
2002	4.3	2.7
2021	1.5	1.0

Source: EPA 2022

For the County of San Diego, there are no roadways/segments identified as deficient facilities under the worst-case traffic scenario that have an ADT greater than the 100,000 that was anticipated for the most congested intersection analyzed by SCAQMD. The most congested intersection in the County is Campo Road/SR-94 between Jamacha Boulevard and Jamacha Road in Valle De Oro. According to Table 5.23 of the Traffic and Circulation Assessment: County of San Diego General Plan Update (Wilson and Company 2009), this intersection has an ADT of 79,200, which is only 79% of the most congested intersection in the SCAB.

Regional access to the Project would be from Interstate 15 (I-15), which is located approximately two miles west of the Project site. From I-15, main access to the Project Site would be provided by State Route 76 (SR 76), which is a two-lane state highway that runs east/west from the City of Oceanside to SR-79/Lake Henshaw. The County of San Diego's General Plan Update Traffic and Circulation Assessment indicates that the segment from Old Hwy 395 to the I-15 southbound ramps on SR-76 has an ADT of 39,600, which is approximately 40% of the most congested intersection in the SCAB (Wilson and Company 2009). The additional trips anticipated with implementation of the Project (15,204 ADT) could increase ADT at this intersection to 54,804, which is still below the County's most congested intersection. This scenario assumes that each new daily trip generated by the Project would travel through the Old Hwy 395/I-15 southbound ramps segment, which is unrealistic but provides an absolute worst-case scenario for conservative analysis. Even with this conservative assumption, project-generated trips would only represent 55% of the most congested intersection in the SCAB, which were determined to not experience a CO "hot spot" according to SCAQMD's 2003 analysis.

In addition, the CO "hot spot" analysis performed by the SCAQMD included emissions for 1997 and 2002. Both running exhaust emission factors and idling emission factors predicted by the EMFAC model decreased from 1997 through 2002 as outlined in Table 12 below. This decrease in CO emission factors is indicative of a phase-out of older vehicles and increasingly strict emissions standards implemented by CARB. Emission factors for San Diego County from the EMFAC2007 Model, which were used in the General Plan Update analysis, indicated that running exhaust emissions of CO would be less than 6.708 g CO per mile in 2010. Continued improvement in vehicular emissions at a rate faster than the rate of vehicle growth and/or congestion means that the potential for CO hotspots in the SDAB is likely to decrease.

Table 12. Carbon Monoxide Emission Factors Predicted by the EMFAC Model

	CO Emission Factors (grams CO/mile)	
Year	Running Exhaust	Idling Exhaust
1997	13.13	2.43
2002	7.98	1.30

Source: South Coast Air Quality Management District 2003

The County of San Diego concluded in the General Plan Update (2011) that because the most congested intersections in San Diego are less congested than those from the SCAB, and because emissions of CO would be lower than those used in the SCAQMD analysis, CO concentrations would be lower within San Diego County, and no CO "hot spots" are anticipated as was concluded in the SCAQMD analysis.

Given that proposed development will not result in traffic that exceeds traffic volumes considered in the General Plan Update analysis, coupled with the considerably low level of CO concentrations in the project area, and continued improvements in vehicle emissions, the Project is not anticipated to result in CO "hot spots". Consequently, implementation of the Project would not result in CO concentrations in excess of the health protective

CAAQS or NAAQS, and as such, would not expose sensitive receptors to significant pollutant concentrations or health effects. Therefore, impacts related to sensitive receptor exposure to substantial CO concentrations would be less than significant, and no mitigation measures are required.

2.4.3.2 Toxic Air Contaminants

In addition to impacts from criteria pollutants, Project impacts may include emissions of pollutants identified by the state and federal government as TACs or HAPs. The greatest potential for TAC emissions during construction would be DPM emissions from heavy equipment operations and heavy-duty trucks, and the associated health impacts to sensitive receptors. Construction of the Project would occur over a period of 20 months and following completion of construction activities, Project-related TAC emissions would cease. The closest sensitive receptors to the Project site are single-family residences immediately adjacent on the northern and southern boundaries of the site. As such, a construction health risk analysis was performed for the Project as discussed below.

Based on results from the HRA, the maximally exposed individual resident offsite would be located at the single-family residences to the northeast of the Project site. Once the first phase of building construction is complete, onsite residents would be exposed to TAC emissions during the second phase of building construction. Notably, Title 24 requires the use of enhanced filtration through installation of HVAC systems with a minimum of MERV13 filtration. MERV13 filters can reduce particulate emissions by almost 70% (adjusting for time spent indoors). Table 13 summarizes the results of the HRA for Project construction, and detailed results are provided in Appendix B, *Health Risk Assessment Output Files*.

Table 13. Construction Activity Health Risk Assessment Results Prior to Mitigation

Impact Parameter	Units	Project Impact	CEQA Threshold	Level of Significance
Offsite				
Cancer Risk	Per Million	18.12	10.0	**Potentially Significant**
HIC	Not Applicable	0.01	1.0	Less than Significant
Onsite				
Cancer Risk	Per Million	2.57	10.0	Less than Significant
HIC	Not Applicable	<0.01	1.0	Less than Significant

Source: Appendix B
Notes: CEQA = California Environmental Quality Act; HIC = Chronic Hazard Index.

The results of the HRA demonstrate that the TAC exposure from construction diesel exhaust emissions would result in cancer risk above the 10 in 1 million threshold and Chronic Hazard Index less than 1 for offsite receptors. Onsite receptors would be exposed to fewer TAC emissions from construction and a shorter duration of exposure. The cancer risk is less than the 10 in 1 million threshold and the Chronic Hazard Index is less than 1 for onsite receptors. Therefore, TAC emissions from construction of the Project would result in a **potentially significant** impact to offsite receptors and thus mitigation is required. Onsite receptors would have a less than significant impact.

Table 14. Construction Activity Health Risk Assessment Results With Mitigation

Impact Parameter	Units	Project Impact	CEQA Threshold	Level of Significance
Offsite				
Cancer Risk	Per Million	9.06	10.0	Less than Significant
HIC	Not Applicable	<0.01	1.0	Less than Significant
Onsite				
Cancer Risk	Per Million	2.57	10.0	Less than Significant
HIC	Not Applicable	<0.01	1.0	Less than Significant

Source: Appendix B
Notes: CEQA = California Environmental Quality Act; HIC = Chronic Hazard Index.

The results of the HRA as shown in Table 14 demonstrate that the TAC exposure from construction diesel exhaust emissions after implementation of mitigation would not result in cancer risk above the 10 in 1 million threshold and Chronic Hazard Index less than 1. Therefore, TAC emissions from construction of the Project would result in a **less than significant impact with mitigation**.

2.4.3.3 Health Effects of Criteria Air Pollutants

Construction and operation of the Project would not result in emissions that exceed SDAPCD's emission thresholds for any criteria air pollutants. The SDAPCD thresholds are based on the SDAB complying with the NAAQS and CAAQS which are protective of public health; therefore, no adverse effects to human health would result from the Project. The following provides a general discussion of criteria air pollutants and their health effects.

Regarding VOCs, some VOCs would be associated with motor vehicles and construction equipment, while others are associated with architectural coatings and asphalt off-gassing, the emissions of which would not result in exceedances of County of San Diego thresholds. Generally, the VOCs in architectural coatings and asphalt are of relatively low toxicity. Additionally, SDAPCD Rule 67.0.1 restricts the VOC content of coatings for both construction and operational applications.

In addition, VOCs and NO_x are precursors to O_3, for which the SDAB is designated as nonattainment with respect to the NAAQS and CAAQS (the SDAB is designated by EPA as an attainment area for the 1-hour O_3 NAAQS standard and 1997 8-hour NAAQS standard). The health effects associated with O_3, as discussed in Section 2.1.4, Criteria Air Pollutants, are generally associated with reduced lung function. The contribution of VOCs and NO_x to regional ambient O_3 concentrations is the result of complex photochemistry. The increases in O_3 concentrations in the SDAB due to O_3 precursor emissions tend to be found downwind from the source location to allow time for the photochemical reactions to occur. However, the potential for exacerbating excessive O_3 concentrations would also depend on the time of year that the VOC emissions would occur because exceedances of the O_3 NAAQS and CAAQS tend to occur between April and October when solar radiation is highest. The holistic effect of a single project's emissions of O_3 precursors is speculative due to the lack of quantitative methods to assess this impact. Nonetheless, the VOC and NO_x emissions associated with Project construction could minimally contribute to regional O_3 concentrations and the associated health impacts. Due to the minimal contribution during construction and operation, as well as the existing good air quality in coastal San Diego areas, health impacts would be considered less than significant.

Regarding NO_2, which is a constituent of NO_x, construction of the Project would not contribute to exceedances of the NAAQS and CAAQS for NO_2 since NO_x emissions would be less than the applicable SDAPCD threshold. As described in Section 3.1, NO_2 health impacts are associated with respiratory irritation, which may be experienced by nearby receptors during the periods of heaviest use of off-road construction equipment. However, these operations would be relatively short term, and the off-road construction equipment would be operating on various portions of the site and would not be concentrated in one portion of the site at any one time. Construction of the Project would not require any stationary emission sources that would create substantial, localized NO_2 impacts.

Similar to O_3, construction of the Project would not exceed thresholds for PM_{10} or $PM_{2.5}$ and would not contribute to exceedances of the NAAQS and CAAQS for particulate matter. Due to the minimal contribution of particulate matter during construction and operation, health impacts would be considered less than significant.

Based on the preceding considerations, health impacts from Project-related criteria air pollutant emissions would be considered **less than significant**.

2.4.3.4 Conclusion

The results of the HRA demonstrate that after implementation of **MM-AQ-1**, which requires use of Tier 4 equipment during construction, the TAC exposure from construction diesel exhaust emissions would not result in cancer risk above the 10 in 1 million threshold, nor a Chronic Hazard Index greater than 1.0. VOC and NO_x emissions, as described previously, would minimally contribute to regional O_3 concentrations and the associated health effects. In addition to O_3, NO_x emissions would not contribute to potential exceedances of the NAAQS and CAAQS for NO_2. As shown in Table 2, the existing NO_2 concentrations in the area are well below the NAAQS and CAAQS standards. Thus, it is not expected the Project's operational NO_x emissions would result in exceedances of the NO_2 standards or contribute to the associated health effects. CO tends to be a localized impact associated with congested intersections. The associated CO "hotspots" were discussed previously as a less than significant impact. Thus, the Project's CO emissions would not contribute to significant health effects associated with this pollutant. PM_{10} and $PM_{2.5}$ would not contribute to potential exceedances of the NAAQS and CAAQS for particulate matter and would not obstruct the SDAB from coming into attainment for these pollutants and would not contribute to significant health effects associated with particulates. Therefore, overall health impacts associated with criteria air pollutants would be considered **less than significant**.

2.4.4 Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

2.4.4.1 Construction

Odors would be generated from vehicles and/or equipment exhaust emissions during construction of the Project. Odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment and architectural coatings. Such odors are temporary and for the types of construction activities anticipated for Project components, would generally occur at magnitudes that would not affect substantial numbers of people. Therefore, impacts associated with odors during construction would be considered **less than significant**.

2.4.4.2 Operational

Due to the subjective nature of odor impacts, the number of variables that can influence the potential for an odor impact, and the variety of odor sources, there are no quantitative or formulaic methodologies to determine if potential odors would have a significant impact. Examples of land uses and industrial operations that are commonly associated with odor complaints include agricultural uses, wastewater treatment plants, food processing facilities, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding facilities. In addition to the odor source, the distance between the sensitive receptor(s) and the odor source, as well as the local meteorological conditions, are considerations in the potential for a project to frequently expose the public to objectionable odors. Although localized air quality impacts are focused on potential impacts to sensitive receptors, such as residences and schools, other land uses where people may congregate (e.g., workplaces) or uses with the intent to attract people (e.g., restaurants and visitor-serving accommodations) should also be considered in the evaluation of potential odor nuisance impacts. The Project would include a mixed-use residential development, which is not expected to produce any nuisance odors; therefore, impacts related to odors caused by the Project would be **less than significant**.

3 Greenhouse Gas Emissions

3.1 Environmental Setting

3.1.1 Climate Change Overview

Climate change refers to any significant change in measures of climate, such as temperature, precipitation, or wind patterns, lasting for an extended period of time (decades or longer). The Earth's temperature depends on the balance between energy entering and leaving the planet's system. Many factors, both natural and human, can cause changes in Earth's energy balance, including variations in the sun's energy reaching Earth, changes in the reflectivity of Earth's atmosphere and surface, and changes in the greenhouse effect, which affects the amount of heat retained by Earth's atmosphere (EPA 2022b).

The greenhouse effect is the trapping and build-up of heat in the atmosphere (troposphere) near the Earth's surface. The greenhouse effect traps heat in the troposphere through a threefold process as follows: Short-wave radiation emitted by the Sun is absorbed by the Earth; the Earth emits a portion of this energy in the form of long-wave radiation; and GHGs in the upper atmosphere absorb this long-wave radiation and emit it into space and toward the Earth. The greenhouse effect is a natural process that contributes to regulating the Earth's temperature and creates a pleasant, livable environment on the Earth. Human activities that emit additional GHGs to the atmosphere increase the amount of infrared radiation that gets absorbed before escaping into space, thus enhancing the greenhouse effect and causing the Earth's surface temperature to rise.

The scientific record of the Earth's climate shows that the climate system varies naturally over a wide range of time scales and that in general, climate changes prior to the Industrial Revolution in the 1700s can be explained by natural causes, such as changes in solar energy, volcanic eruptions, and natural changes in GHG concentrations. Recent climate changes, in particular the warming observed over the past century, however, cannot be explained by natural causes alone. Rather, it is extremely likely that human activities have been the dominant cause of that warming since the mid-20th century and is the most significant driver of observed climate change (IPCC 2014; EPA 2022b). Human influence on the climate system is evident from the increasing GHG concentrations in the atmosphere, positive radiative forcing, observed warming, and improved understanding of the climate system (IPCC 2014). The atmospheric concentrations of GHGs have increased to levels unprecedented in the last 800,000 years, primarily from fossil fuel emissions and secondarily from emissions associated with land use changes (IPCC 2014). Continued emissions of GHGs will cause further warming and changes in all components of the climate system, which is discussed further in Section 3.1.5, Potential Effects of Climate Change.

3.1.2 Greenhouse Gases and other Climate Forcing Substances

A GHG is any gas that absorbs infrared radiation in the atmosphere; in other words, GHGs trap heat in the atmosphere. GHGs include, but are not limited to, carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), ozone (O_3), water vapor, hydrofluorocarbons (HFCs), hydrochlorofluorocarbons (HCFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6).[6] Some GHGs, such as CO_2, CH_4, and N_2O, occur naturally and are emitted to the

[6] California Health and Safety Code 38505 identifies seven GHGs that CARB is responsible to monitor and regulate to reduce emissions: CO_2, CH_4, N_2O, SF_6, HFCs, PFCs, and NF_3.

atmosphere through natural processes and human activities. Of these gases, CO_2 and CH_4 are emitted in the greatest quantities from human activities. Manufactured GHGs, which have a much greater heat-absorption potential than CO_2, include fluorinated gases, such as HFCs, HCFCs, PFCs, and SF_6, which are associated with certain industrial products and processes. A summary of the most common GHGs and their sources is included in the following text.[7] Also included is a discussion of other climate forcing substances.

Carbon Dioxide (CO_2). CO_2 is a naturally occurring gas and a by-product of human activities and is the principal anthropogenic GHG that affects the Earth's radiative balance. Natural sources of CO_2 include respiration of bacteria, plants, animals, and fungus; evaporation from oceans; volcanic out-gassing; and decomposition of dead organic matter. Human activities that generate CO_2 are from the combustion of fuels such as coal, oil, natural gas, and wood and changes in land use.

Methane (CH_4). CH_4 is produced through both natural and human activities. CH_4 is a flammable gas and is the main component of natural gas. Methane is produced through anaerobic (without oxygen) decomposition of waste in landfills, flooded rice fields, animal digestion, decomposition of animal wastes, production and distribution of natural gas and petroleum, coal production, and incomplete fossil fuel combustion.

Nitrous Oxide (N_2O). N_2O is produced through natural and human activities, mainly through agricultural activities and natural biological processes, although fuel burning and other processes also create N_2O. Sources of N_2O include soil cultivation practices (microbial processes in soil and water), especially the use of commercial and organic fertilizers, manure management, industrial processes (such as in nitric acid production, nylon production, and fossil-fuel-fired power plants), vehicle emissions, and using N_2O as a propellant (such as in rockets, racecars, and aerosol sprays).

Fluorinated Gases. Fluorinated gases (also referred to as F-gases) are synthetic powerful GHGs emitted from many industrial processes. Fluorinated gases are commonly used as substitutes for stratospheric ozone-depleting substances (e.g., CFCs, HCFCs, and halons). The most prevalent fluorinated gases include the following:

- **Hydrofluorocarbons:** HFCs are compounds containing only hydrogen, fluorine, and carbon atoms. HFCs are synthetic chemicals used as alternatives to ozone-depleting substances in serving many industrial, commercial, and personal needs. HFCs are emitted as by-products of industrial processes and are used in manufacturing.
- **Perfluorocarbons:** PFCs are a group of human-made chemicals composed of carbon and fluorine only. These chemicals were introduced as alternatives, with HFCs, to the ozone depleting substances. The two main sources of PFCs are primary aluminum production and semiconductor manufacturing. Since PFCs have stable molecular structures and do not break down through the chemical processes in the lower atmosphere, these chemicals have long lifetimes, ranging between 10,000 and 50,000 years.
- **Sulfur Hexafluoride:** SF_6 is a colorless gas soluble in alcohol and ether and slightly soluble in water. SF_6 is used for insulation in electric power transmission and distribution equipment, semiconductor manufacturing, the magnesium industry, and as a tracer gas for leak detection.
- **Nitrogen Trifluoride:** NF_3 is used in the manufacture of a variety of electronics, including semiconductors and flat panel displays.

[7] The descriptions of GHGs are summarized from the Intergovernmental Panel on Climate Change (IPCC) Second Assessment Report (1995), IPCC Fourth Assessment Report (2007), CARB's Glossary of Air Pollution Terms (2015), and EPA's Glossary of Climate Change Terms (2016).

Chlorofluorocarbons (CFCs). CFCs are synthetic chemicals that have been used as cleaning solvents, refrigerants, and aerosol propellants. CFCs are chemically unreactive in the lower atmosphere (troposphere) and the production of CFCs was prohibited in 1987 due to the chemical destruction of stratospheric O_3.

Hydrochlorofluorocarbons (HCFCs). HCFCs are a large group of compounds, whose structure is very close to that of CFCs—containing hydrogen, fluorine, chlorine, and carbon atoms—but including one or more hydrogen atoms. Like HFCs, HCFCs are used in refrigerants and propellants. HCFCs were also used in place of CFCs for some applications; however, their use in general is being phased out.

Black Carbon. Black carbon is a component of fine particulate matter, which has been identified as a leading environmental risk factor for premature death. It is produced from the incomplete combustion of fossil fuels and biomass burning, particularly from older diesel engines and forest fires. Black carbon warms the atmosphere by absorbing solar radiation, influences cloud formation, and darkens the surface of snow and ice, which accelerates heat absorption and melting. Black carbon is a short-lived species that varies spatially, which makes it difficult to quantify the global warming potential. Diesel particulate matter emissions are a major source of black carbon and are toxic air contaminates (TACs) that have been regulated and controlled in California for several decades to protect public health. In relation to declining diesel particulate matter from the California Air Resources Board's (CARB's) regulations pertaining to diesel engines, diesel fuels, and burning activities, CARB estimates that annual black carbon emissions in California have reduced by 70% between 1990 and 2010, with 95% control expected by 2020 (CARB 2014).

Water Vapor. The primary source of water vapor is evaporation from the ocean, with additional vapor generated by sublimation (change from solid to gas) from ice and snow, evaporation from other water bodies, and transpiration from plant leaves. Water vapor is the most important, abundant, and variable GHG in the atmosphere and maintains a climate necessary for life.

Ozone (O_3). Tropospheric O_3, which is created by photochemical reactions involving gases from both natural sources and human activities, acts as a GHG. Stratospheric O_3, which is created by the interaction between solar ultraviolet radiation and molecular oxygen (O_2), plays a decisive role in the stratospheric radiative balance. Depletion of stratospheric O_3, due to chemical reactions that may be enhanced by climate change, results in an increased ground-level flux of ultraviolet-B radiation.

Aerosols. Aerosols are suspensions of particulate matter in a gas emitted into the air through burning biomass (plant material) and fossil fuels. Aerosols can warm the atmosphere by absorbing and emitting heat and can cool the atmosphere by reflecting light.

3.1.3 Global Warming Potential

Gases in the atmosphere can contribute to climate change both directly and indirectly. Direct effects occur when the gas itself absorbs radiation. Indirect radiative forcing occurs when chemical transformations of the substance produce other GHGs, when a gas influences the atmospheric lifetimes of other gases, and/or when a gas affects atmospheric processes that alter the radiative balance of the Earth (e.g., affect cloud formation or albedo) (EPA 2022b). The Intergovernmental Panel on Climate Change (IPCC) developed the global warming potential (GWP) concept to compare the ability of each GHG to trap heat in the atmosphere relative to another gas. The GWP of a GHG is defined as the ratio of the time-integrated radiative forcing from the instantaneous release of 1 kilogram of

a trace substance relative to that of 1 kilogram of a reference gas (IPCC 2014). The reference gas used is CO_2; therefore, GWP-weighted emissions are measured in metric tons CO_2 equivalent (MT CO_2e).

The current version of the CalEEMod (version 2020.4.0) assumes that the GWP for CH_4 is 25 (so emissions of 1 MT of CH_4 are equivalent to emissions of 25 MT of CO_2), and the GWP for N_2O is 298, based on the IPCC Fourth Assessment Report (IPCC 2007). The GWP values identified in CalEEMod were applied to the Project.

3.1.4 Sources of Greenhouse Gas Emissions

Global Inventory

Anthropogenic GHG emissions worldwide in 2020 (the most recent year for which data is available) totaled approximately 49,800 million metric tons (MMT) of CO_2e, excluding land use change and forestry (PBL 2022). The top six GHG emitters include China, the United States, the Russian Federation, India, Japan, and the European Union, which accounted for approximately 60% of the total global emissions, or approximately 30,270 MMT CO_2e (PBL 2018). Table 15 presents the top GHG-emissions-producing countries.

Table 15. Six Top GHG Producer Countries

Emitting Countries	2020 GHG Emissions (MMT CO_2e)[a,b]
China	14,300
United States	5,640
European Union	3,440
India	3,520
Russian Federation	2,210
Japan	1,160
Total	**30,270**

Source: PBL 2022.
Notes: MMT CO_2e = million metric tons of carbon dioxide equivalent.
[a] Column may not add due to rounding.
[b] GHG emissions do not include land use change and forestry-related GHG emissions.

National Inventory

Per the EPA Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990 to 2020 (EPA 2022), total United States GHG emissions were approximately 5,981.4 MMT CO_2e in 2020 (EPA 2022). The primary GHG emitted by human activities in the United States was CO_2, which represented approximately 94.7% of total GHG emissions (4,715 MMT CO_2e). The largest source of CO_2, and of overall GHG emissions, was fossil-fuel combustion, which accounted for approximately 87.2% of CO_2 emissions in 2020 (4,342.7 MMT CO_2e). Total U.S. emissions have decreased by 7.3% from 1990 to 2020, down from a high of 15.7% above 1990 levels in 2007. Emissions decreased from 2019 to 2020 by 9.0% (590.4 MMT CO_2e.). Net emissions (i.e., including sinks) were 5,222.4 MMT CO_2e in 2020. Overall, net emissions decreased 10.6% percent from 2019 to 2020 and decreased 21.4 percent from 2005 levels. The sharp decline in emissions from 2019 to 2020 is largely due to the impacts of the coronavirus (COVID-19) pandemic on travel and economic activity; however, the decline also reflects the combined impacts of long-term trends in many factors, including population, economic growth, energy markets, technological changes including energy efficiency, and the carbon intensity of energy fuel choices. Between 2019 and 2020, the decrease in total GHG emissions was driven largely by a 10.5% decrease in CO_2 emissions from fossil fuel combustion, including a 13.3%

decrease in transportation sector emissions from less travel due to the COVID-19 pandemic and a 10.4% decrease in the electric power sector. The decrease in electric power sector emissions was due to a decrease in electricity demand of 2.5% since 2019 and also reflects the continued shift from coal to less carbon intensive natural gas and renewables (EPA 2022).

State Inventory

According to California's 2000–2020 GHG emissions inventory (2022 edition), California emitted approximately 369.2 MMT CO_2e in 2020, including emissions resulting from out-of-state electrical generation (CARB 2022d). The sources of GHG emissions in California include transportation, industry, electric power production from both in-state and out-of-state sources, residential and commercial activities, agriculture, high-GWP substances, and recycling and waste. Table 16 presents California GHG emission source categories and their relative contributions to the emissions inventory in 2020.

Between 2000 and 2019, per-capita GHG emissions in California have dropped from a peak of 14.0 MT per person in 2001 to 10.5 MT per person in 2019, representing an approximate 25% decrease. In addition, total GHG emissions in 2019 were approximately 7 MMT CO_2e lower than 2018 emissions (CARB 2022d).

Table 16. GHG Emissions Sources in California

Source Category	Annual GHG Emissions (MMT CO_2e)	Percent of Total*
Transportation	136.60	37%
Industrial uses	73.84	20%
Electricity generation[a]	59.07	16%
Residential and commercial uses	36.92	10%
Agriculture and Forestry	33.22	9%
High GWP substances	22.15	6%
Recycling and waste	7.38	2%
Totals	**369.2**	**100%**

Source: CARB 2022b.
Notes: GHG = greenhouse gas; GWP = global warming potential; MMT CO_2e = million metric tons of carbon dioxide equivalent. Emissions reflect 2020 California GHG inventory.
Totals may not sum due to rounding.
[a] Includes emissions associated with imported electricity, which account for 18.46 MMT CO_2e.

Per capita GHG emissions in California have dropped from a 2001 peak of 13.8 MT per person to 9.3 MT per person in 2020, a 33% decrease. In 2016, statewide GHG emissions dropped below the 2020 GHG Limit of 431 MMT CO_2e and have remained below the Limit since that time (CARB 2022a).

Local Inventories

According to the GHG inventory data compiled by the Energy Policy Initiative Center, in 2012, the County (as defined to include all cities therein and unincorporated County areas) emitted 34.7 MMT CO_2e (EPIC 2015).

The 2013 emissions inventory for the City is shown in Table 17 below.

Table 17. City of Oceanside GHG Emissions by Sectors for 2013

Source Category	Annual GHG Emissions (MT CO_2e)	Percent of Total
Transportation	477,178	48.5
Electricity	251,524	25.6
Natural Gas	162,447	16.5
Solid Waste	40,615	4.1
Water[1]	27,420	2.8
Municipal Operations	24,828	2.5
Total	984,012	100

Source: City of Oceanside 2019.
Notes: GHG emissions for each category are rounded. Sums may not add up to totals due to rounding.
[1] Emissions associated with water and wastewater treatment at City-operated facilities were accounted for as Municipal emissions. Water emissions include upstream emissions from import of water to the City.

3.1.5 Potential Effects of Climate Change

Globally, climate change has the potential to affect numerous environmental resources through uncertain impacts related to future air temperatures and precipitation patterns. The 2014 IPCC Synthesis Report indicated that warming of the climate system is unequivocal and since the 1950s, many of the observed changes are unprecedented over decades to millennia. Signs that global climate change has occurred include warming of the atmosphere and ocean, diminished amounts of snow and ice, and rising sea levels (IPCC 2014).

In California, climate change impacts have the potential to affect sea-level rise, agriculture, snowpack and water supply, forestry, wildfire risk, public health, frequency of severe weather events, and electricity demand and supply. The primary effect of global climate change has been a rise in average global tropospheric temperature. Reflecting the long-term warming trend since pre-industrial times, observed global mean surface temperature for the decade 2006–2015 was 0.87°C (1.6°F) (likely between 0.75°C [1.4°F] and 0.99°C [1.8°F]) higher than the average over the 1850–1900 period (IPCC 2018). Scientific modeling predicts that continued emissions of GHGs at or above current rates would induce more extreme climate changes during the twenty-first century than were observed during the twentieth century. Human activities are estimated to have caused approximately 1.0°C (1.8°F) of global warming above pre-industrial levels, with a likely range of 0.8°C to 1.2°C (1.4°F to 2.2°F) (IPCC 2018). Global warming is likely to reach 1.5°C (2.7°F) between 2030 and 2052 if it continues to increase at the current rate (IPCC 2018).

Although climate change is driven by global atmospheric conditions, climate change impacts are felt locally. A scientific consensus confirms that climate change is already affecting California. The Office of Environmental Health Hazard Assessment identified various indicators of climate change in California, which are scientifically based measurements that track trends in various aspects of climate change. Many indicators reveal discernible evidence that climate change is occurring in California and is having significant, measurable impacts in the state. Changes in the state's climate have been observed, including an increase in annual average air temperature with record warmth from 2012 to 2016, more frequent extreme heat events, more extreme drought, a decline in winter chill, an increase in cooling degree days and a decrease in heating degree days, and an increase in variability of statewide precipitation (OEHHA 2018).

Warming temperatures and changing precipitation patterns have altered California's physical systems—the ocean, lakes, rivers, and snowpack—upon which the state depends. Winter snowpack and spring snowmelt runoff from the

Sierra Nevada and southern Cascade Mountains provide approximately one-third of the state's annual water supply. Impacts of climate on physical systems have been observed such as high variability of snow-water content (i.e., amount of water stored in snowpack), decrease in snowmelt runoff, glacier change (loss in area), rise in sea levels, increase in average lake water temperature and coastal ocean temperature, and a decrease in dissolved oxygen in coastal waters (OEHHA 2018).

Impacts of climate change on biological systems, including humans, wildlife, and vegetation, have also been observed, including climate change impacts on terrestrial, marine, and freshwater ecosystems. As with global observations, species responses include those consistent with warming: elevational or latitudinal shifts in range, changes in the timing of key plant and animal life cycle events, and changes in the abundance of species and in community composition. Humans are better able to adapt to a changing climate than plants and animals in natural ecosystems. Nevertheless, climate change poses a threat to public health as warming temperatures and changes in precipitation can affect vector-borne pathogen transmission and disease patterns in California as well as the variability of heat-related deaths and illnesses. In addition, since 1950, the area burned by wildfires each year has followed an increasing trend overall.

- CNRA has released four California Climate Change Assessments (in 2006, 2009, 2012, and 2018), which have addressed the following: acceleration of warming across the state, more intense and frequent heat waves, greater riverine flows, accelerating sea level rise, more intense and frequent drought, more severe and frequent wildfires, more severe storms and extreme weather events, shrinking snowpack and less overall precipitation, and ocean acidification, hypoxia, and warming. To address local and regional governments' need for information to support action in their communities, the Fourth Assessment (CNRA 2018) includes reports for nine regions of the state. Key highlights for the San Diego Region (include the following (CNRA 2018):Temperature is projected to increase substantially, along with mean temperature, heat wave frequency will increase, with more intensity and longer duration.
- Precipitation will remain highly variable but will change in character, with wetter winters, drier springs, and more frequent and severe droughts punctuated by more intense individual precipitation events.
- Wildfire risk will increase in the future as climate warms. The risk for large catastrophic wildfires driven by Santa Ana wind events will also likely increase as a result of a drier autumns leading to low antecedent precipitation before the height of the Santa Ana wind season.
- The sea level along San Diego County is expected to rise. High tides combined with elevated shoreline water levels produced by locally and distantly driven wind-driven waves will drive extreme events. Longer-term sea level will increase rapidly in the second half of the century and will be punctuated by short periods of storm-driven extreme sea levels that will imperil existing infrastructure, structures, and ecosystems with increasing frequency.

3.2 Regulatory Setting

3.2.1 Federal

Massachusetts v. EPA. In *Massachusetts v. EPA* (April 2007), the U.S. Supreme Court directed the EPA administrator to determine whether GHG emissions from new motor vehicles cause or contribute to air pollution that may reasonably be anticipated to endanger public health or welfare, or whether the science is too uncertain to make a

reasoned decision. In December 2009, the administrator signed a final rule with the following two distinct findings regarding GHGs under Section 202(a) of the federal Clean Air Act:

- The Administrator found that elevated concentrations of GHGs—CO2, CH4, N2O, HFCs, PFCs, and SF6—in the atmosphere threaten the public health and welfare of current and future generations. This is the "endangerment finding."
- The Administrator further found the combined emissions of GHGs—CO2, CH4, N2O, and HFCs—from new motor vehicles and new motor vehicle engines contribute to the GHG air pollution that endangers public health and welfare. This is the "cause or contribute finding."

These two findings were necessary to establish the foundation for regulation of GHGs from new motor vehicles as air pollutants under the Clean Air Act.

Energy Independence and Security Act. The Energy Independence and Security Act of 2007 (December 2007), among other key measures, would do the following, which would aid in the reduction of national GHG emissions:

1. Increase the supply of alternative fuel sources by setting a mandatory Renewable Fuel Standard requiring fuel producers to use at least 36 billion gallons of biofuel by 2022.
2. Set a target of 35 miles per gallon for the combined fleet of cars and light trucks by model year 2020 and direct National Highway Traffic Safety Administration (NHTSA) to establish a fuel economy program for medium- and heavy-duty trucks and create a separate fuel economy standard for work trucks.
3. Prescribe or revise standards affecting regional efficiency for heating and cooling products and procedures for new or amended standards, energy conservation, energy efficiency labeling for consumer electronic products, residential boiler efficiency, electric motor efficiency, and home appliances.

Federal Vehicle Standards. In response to a U.S. Supreme Court ruling, the Bush Administration issued Executive Order (EO) 13432 in 2007 directing the EPA, the Department of Transportation, and the Department of Energy to establish regulations that reduce GHG emissions from motor vehicles, non-road vehicles, and non-road engines by 2008. In 2009, the NHTSA issued a final rule regulating fuel efficiency and GHG emissions from cars and light-duty trucks for model year 2011, and in 2010, the EPA and NHTSA issued a final rule regulating cars and light-duty trucks for model years 2012–2016 (75 FR 25324–25728).

In 2010, President Barack Obama issued a memorandum directing the Department of Transportation, Department of Energy, EPA, and NHTSA to establish additional standards regarding fuel efficiency and GHG reduction, clean fuels, and advanced vehicle infrastructure. In response to this directive, the EPA and NHTSA proposed stringent, coordinated federal GHG and fuel economy standards for model years 2017–2025 light-duty vehicles. The proposed standards projected to achieve 163 grams per mile of CO_2 by model year 2025 on an average industry fleet-wide basis, which is equivalent to 54.5 miles per gallon if this level were achieved solely through fuel efficiency. The final rule was adopted in 2012 for model years 2017–2021 (77 FR 62624–63200). On January 12, 2017, the EPA finalized its decision to maintain the current GHG emissions standards for model years 2022–2025 cars and light trucks (EPA 2022c).

In addition to the regulations applicable to cars and light-duty trucks described above, in 2011, the EPA and NHTSA announced fuel economy and GHG standards for medium- and heavy-duty trucks for model years 2014–2018 (76 FR 57106–57513). The standards for CO_2 emissions and fuel consumption are tailored to three main vehicle categories: combination tractors, heavy-duty pickup trucks and vans, and vocational vehicles. According to the EPA,

this regulatory program will reduce GHG emissions and fuel consumption for the affected vehicles by 6%–23% over the 2010 baselines.

In August 2016, the EPA and NHTSA announced the adoption of the phase two program related to the fuel economy and GHG standards for medium- and heavy-duty trucks. The phase two program will apply to vehicles with model year 2018 through 2027 for certain trailers, and model years 2021 through 2027 for semi-trucks, large pickup trucks, vans, and all types and sizes of buses and work trucks. The final standards are expected to lower CO_2 emissions by approximately 1.1 billion MT and reduce oil consumption by up to 2 billion barrels over the lifetime of the vehicles sold under the program (EPA and NHTSA 2016).

In August 2018, the EPA and NHTSA proposed to amend certain fuel economy and GHG standards for passenger cars and light trucks and establish new standards for model years 2021 through 2026. Compared to maintaining the post-2020 standards in place at the time, the 2018 proposal would increase U.S. fuel consumption by about half a million barrels per day (2%–3% of total daily consumption, according to the Energy Information Administration) and would impact the global climate by 3/1000th of 1°C by 2100 (EPA and NHTSA 2018). California and other states have stated their intent to challenge federal actions that would delay or eliminate GHG reduction measures, and have committed to cooperating with other countries to implement global climate change initiatives.

In 2019, the EPA and NHTSA published the Safer Affordable Fuel-Efficient Vehicles Rule Part One: One National Program (SAFE-1), which revoked California's authority to set its own GHG emissions standards and set zero-emission vehicle (ZEV) mandates in California. In March 2020, Part Two was issued which set CO2 emissions standards and corporate average fuel economy standards for passenger vehicles and light-duty trucks for model years 2021 through 2026. In response to EO 13990, on December 21, 2021, NHTSA finalized the CAFE Preemption rulemaking to withdraw its portions of the Part One Rule. The final rule concluded that the Part One Rule overstepped the agency's legal authority and established overly broad prohibitions that did not account for a variety of important state and local interests.

Then, in March 2022, NHTSA established new fuel economy standards that would require an industry-wide fleet average of approximately 49 miles per gallon for passenger cars and light trucks in model year 2026, by increasing fuel efficiency by 8% annually for model years 2024 and 2025, and 10% annually for model year 2026.

Inflation Reduction Act of 2022. The Inflation Reduction Act was signed into law by President Biden in August 2022. The bill includes specific investment in energy and climate reform and is projected to reduce GHG emissions within the U.S. by 40% as compared to 2005 levels by 2030. The bill allocates funds to boost renewable energy infrastructure (e.g., solar panels and wind turbines), includes tax credits for the purchase of electric vehicles, and includes measures that will make homes more energy efficient.

3.2.2 State

The statewide GHG emissions regulatory framework is summarized below by category: state climate change targets, building energy, renewable energy and energy procurement, mobile sources, solid waste, water, and other state regulations and goals. The following text describes executive orders (EO), legislation [assembly bills (AB) and senate bills (SB)], regulations, and other plans and policies that would directly or indirectly reduce GHG emissions and/or address climate change issues.

State Climate Change Targets

The state has taken a number of actions to address climate change. These include executive orders, legislation, and CARB plans and requirements. These are summarized below.

EO S-3-05. EO S-3-05 (June 2005) established the following statewide goals: GHG emissions should be reduced to 2000 levels by 2010, GHG emissions should be reduced to 1990 levels by 2020, and GHG emissions should be reduced to 80% below 1990 levels by 2050.

EO S-3-05 also directed the California EPA to report biannually on progress made toward meeting the GHG targets and the impacts to California due to global warming, including impacts to water supply, public health, agriculture, the coastline, and forestry. The Climate Action Team was formed, which subsequently issued reports from 2006 to 2010 (CAT 2016).

AB 32. In furtherance of the goals established in EO S-3-05, the legislature enacted AB 32 (Núñez and Pavley). The bill is referred to as the California Global Warming Solutions Act of 2006 (September 27, 2006). AB 32 provided initial direction on creating a comprehensive multiyear program to limit California's GHG emissions at 1990 levels by 2020 and initiate the transformations required to achieve the state's long-range climate objectives.

EO B-30-15. EO B-30-15 (April 2015) identified an interim GHG reduction target in support of targets previously identified under EO S-3-05 and AB 32. EO B-30-15 set an interim target goal of reducing statewide GHG emissions to 40% below 1990 levels by 2030 to keep California on its trajectory toward meeting or exceeding the long-term goal of reducing statewide GHG emissions to 80% below 1990 levels by 2050, as set forth in EO S-3-05. To facilitate achievement of this goal, EO B-30-15 calls for an update to CARB's Scoping Plan to express the 2030 target in terms of MMT CO_2e. The executive order also calls for state agencies to continue to develop and implement GHG emissions reduction programs in support of the reduction targets. Sector-specific agencies in transportation, energy, water, and forestry were required to prepare GHG reduction plans by September 2015, followed by a report on action taken in relation to these plans in June 2016. EO B-30-15 does not require local agencies to take any action to meet the new interim GHG reduction target.

SB 32 and AB 197. SB 32 and AB 197 (enacted in 2016) are companion bills that set a new statewide GHG reduction targets, make changes to CARB's membership and increase legislative oversight of CARB's climate change-based activities, and expand dissemination of GHG and other air-quality-related emissions data to enhance transparency and accountability. More specifically, SB 32 codified the 2030 emissions reduction goal of EO B-30-15 by requiring CARB to ensure that statewide GHG emissions are reduced to 40% below 1990 levels by 2030. AB 197 established the Joint Legislative Committee on Climate Change Policies, consisting of at least three members of the Senate and three members of the Assembly to provide ongoing oversight over implementation of the state's climate policies. AB 197 also added two members of the Legislature to CARB as nonvoting members; requires CARB to make available and update (at least annually via its website) emissions data for GHGs, criteria air pollutants, and TACs from reporting facilities; and requires CARB to identify specific information for GHG emissions reduction measures when updating the Scoping Plan.

EO B-55-18. EO B-55-18 (September 2018) establishes a statewide policy for the state to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net-negative emissions thereafter. The goal is an addition to the existing statewide targets of reducing the state's GHG emissions. CARB will work with relevant

state agencies to ensure that future scoping plans identify and recommend measures to achieve the carbon neutrality goal.

Assembly Bill 1279. The Legislature enacted AB 1279, the California Climate Crisis Act, in September 2022. The bill declares the policy of the state to achieve net zero GHG emissions as soon as possible, but no later than 2045, and achieve and maintain net negative GHG emissions thereafter. Additionally, the bill requires that by 2045, statewide anthropogenic GHG emissions be reduced to at least 85% below 1990 levels.

California Air Resources Board's Climate Change Scoping Plan. One specific requirement of AB 32 was for CARB to prepare a scoping plan for achieving the maximum technologically feasible and cost-effective GHG emission reductions by 2020 (Health and Safety Code Section 38561[a]), and to update the plan at least once every 5 years. In 2008, CARB approved the first scoping plan. The Climate Change Scoping Plan: A Framework for Change (Scoping Plan) included a mix of recommended strategies that combined direct regulations, market-based approaches, voluntary measures, policies, and other emission reduction programs calculated to meet the 2020 statewide GHG emissions limit and initiate the transformations needed to achieve the state's long-range climate objectives. The key elements of the Scoping Plan include the following (CARB 2008):

1. Expanding and strengthening existing energy efficiency programs, as well as building and appliance standards.
2. Achieving a statewide renewable energy mix of 33%.
3. Developing a California cap-and-trade program that links with other Western Climate Initiative partner programs to create a regional market system and caps sources contributing 85% of California's GHG emissions.
4. Establishing targets for transportation-related GHG emissions for regions throughout California, and pursuing policies and incentives to achieve those targets.
5. Adopting and implementing measures pursuant to existing state laws and policies, including California's clean car standards, goods movement measures, and the Low Carbon Fuel Standard (17 CCR 95480 et seq.).
6. Creating targeted fees, including a public goods charge on water use, fees on high GWP gases, and a fee to fund the administrative costs of the State of California's long-term commitment to AB 32 implementation.

The Scoping Plan also identified local governments as essential partners in achieving California's goals to reduce GHG emissions because they have broad influence and, in some cases, exclusive authority over activities that contribute to significant direct and indirect GHG emissions through their planning and permitting processes, local ordinances, outreach and education efforts, and municipal operations. Specifically, the Scoping Plan encouraged local governments to adopt a reduction goal for municipal operations, and for community emissions to reduce GHGs by approximately 15% from then levels (2008) by 2020. Many local governments developed community-scale local GHG reduction plans based on this Scoping Plan recommendation.

In 2014, CARB approved the first update to the Scoping Plan. The First Update to the Climate Change Scoping Plan: Building on the Framework (First Update) defined the state's GHG emission reduction priorities for the next 5 years, and laid the groundwork to start the transition to the post-2020 goals set forth in EO S-3-05 and EO B-16-2012. The First Update concluded that California is on track to meet the 2020 target but recommended a 2030 mid-term GHG reduction target be established to ensure a continuum of action to reduce emissions. The First Update recommended a mix of technologies in key economic sectors to reduce emissions through 2050, including energy demand reduction through efficiency and activity changes; large-scale electrification of on-road vehicles, buildings, and industrial machinery; decarbonizing electricity and fuel supplies; and the rapid market penetration of efficient

and clean energy technologies. As part of the First Update, CARB recalculated the state's 1990 emissions level, using more recent GWPs identified by the IPCC, from 427 MMT CO_2e to 431 MMT CO_2e (CARB 2014).

In 2015, as directed by EO B-30-15, CARB began working on an update to the Scoping Plan to incorporate the 2030 target of 40% below 1990 levels by 2030 to keep California on its trajectory toward meeting or exceeding the long-term goal of reducing GHG emissions to 80% below 1990 levels by 2050 as set forth in EO S-3-05. The governor called on California to pursue a new and ambitious set of strategies, in line with the five climate change pillars from his inaugural address, to reduce GHG emissions and prepare for the unavoidable impacts of climate change. In the summer of 2016, the legislature affirmed the importance of addressing climate change through passage of SB 32.

In December 2017, CARB adopted California's 2017 Climate Change Scoping Plan (2017 Scoping Plan) for public review and comment (CARB 2017). The 2017 Scoping Plan builds on the successful framework established in the initial Scoping Plan and First Update while identifying new, technologically feasible and cost-effective strategies that will serve as the framework to achieve the 2030 GHG target as established by SB 32 and define the state's climate change priorities to 2030 and beyond. The strategies' commitments include implementing renewable energy and energy efficiency strategies (including the mandates of SB 350), increasing stringency of the Low Carbon Fuel Standard, implementing measures identified in the Mobile Source and Freight Strategies, implementing measures identified in the proposed Short-Lived Climate Pollutant Reduction Strategy, and increasing stringency of SB 375 targets. To fill the gap in additional reductions needed to achieve the 2030 target, it recommends continuing the Cap-and-Trade Program and a measure to reduce GHGs from refineries by 20%.

For local governments, the 2017 Scoping Plan replaced the initial Scoping Plan's 15% reduction goal with a recommendation to aim for a community-wide goal of no more than 6 MT CO_2e per capita by 2030, and no more than 2 MT CO_2e per capita by 2050, which are consistent with the state's long-term goals. These goals are also consistent with the Under 2 Memorandum of Understanding (Under 2 2016) and the Paris Agreement, which are developed around the scientifically based levels necessary to limit global warming to below 2°C. The 2017 Scoping Plan recognized the benefits of local government GHG planning (e.g., through CAPs) and provided more information regarding tools CARB is working on to support those efforts. It also recognized the CEQA streamlining provisions for project-level review where there is a legally adequate CAP.[8]

The Scoping Plan recommends strategies for implementation at the statewide level to meet the goals of AB 32, SB 32, and the executive orders, and establishes an overall framework for the measures that will be adopted to reduce California's GHG emissions. A project is considered consistent with the statutes and executive orders if it meets the general policies in reducing GHG emissions to facilitate the achievement of the state's goals and does not impede attainment of those goals. A project would be consistent if it will further the objectives and not obstruct their attainment.

CARB adopted the 2022 Scoping Plan Update in December 2022, which outlines the state's plan to reach carbon neutrality by 2045 or earlier, while also assessing the progress the state is making toward reducing GHG emissions by at least 40% below 1990 levels by 2030, as is required by SB 32 and laid out in the Second Update. The carbon neutrality goal requires CARB to expand proposed actions from only the reduction of anthropogenic sources of GHG emissions to also include those that capture and store carbon (e.g., through natural and working lands, or mechanical technologies). The carbon reduction programs build on and accelerate those currently in place, including moving to zero-emission transportation; phasing out use of fossil gas use for heating homes and buildings; reducing chemical

8 *Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490; *San Francisco Tomorrow et al. v. City and County of San Francisco* (2015) 229 Cal.App.4th 498; *San Franciscans Upholding the Downtown Specific Plan v. City and County of San Francisco* (2002) 102 Cal.App.4th 656; *Sequoyah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4th 704, 719.

and refrigerants with high GWP; providing communities with sustainable options for walking, biking, and public transit; displacement of fossil-fuel fired electrical generation through use of renewable energy alternatives (e.g., solar arrays and wind turbines); and scaling up new options such as green hydrogen (CARB 2022e).

The 2022 Scoping Plan also emphasizes that there is no realistic path to carbon neutrality without carbon removal and sequestration, and to achieve the state's carbon neutrality goal, carbon reduction programs must be supplemented by strategies to remove and sequester carbon. Strategies for carbon removal and sequestration include carbon capture and storage from anthropogenic point sources, where CO_2 is captured as it leaves a facility's smokestack and is injected into geologic formations or used in industrial materials (e.g., concrete); and carbon dioxide removal from ambient air, through mechanical (e.g., direct air capture with sequestration) or nature-based (e.g., management of natural and working lands) applications.

The 2022 Scoping Plan included Appendix D, Local Actions, which includes recommendations intended to build momentum for local government actions that align with the State's climate goals, with a focus on local GHG reduction strategies (commonly referred to as climate action planning) and approval of new land use development projects, including through environmental review under CEQA. The recommendations provided in Appendix D are non-binding and should not be interpreted as a directive to local governments, but rather as evidence-based analytical tools to assist local governments with their role as essential partners in achieving California's climate goals. Appendix D recognizes consistency with a CEQA-qualified GHG reduction plan such as a Climate Action Plan as a preferred option for evaluating potential GHG emission impacts under CEQA. Absent a qualified GHG reduction plan, Appendix D provides additional potential threshold options including key attributes that residential and mixed-use projects should achieve that would align with the State's climate goals, a net-zero threshold, and use of air district recommended thresholds of significance.[9]

SB 605 and SB 1383. SB 605 (2014) required CARB to complete a comprehensive strategy to reduce emissions of short-lived climate pollutants in the state, and SB 1383 (2016) required CARB to approve and implement that strategy by January 1, 2018. The Short-Lived Climate Pollutants Reduction Strategy was approved by CARB in March 2017, and lays out a range of options to reduce short-lived climate pollutant emissions in California, including regulations, incentives, and other market-supporting activities. SB 1383 also establishes specific targets for the reduction of short-lived climate pollutants (40% below 2013 levels by 2030 for CH_4 and HFCs, and 50% below 2013 levels by 2030 for anthropogenic black carbon), and provides direction for reductions from dairy and livestock operations and landfills. Accordingly, and as mentioned above, CARB adopted its Short-Lived Climate Pollutant Reduction Strategy in March 2017. This strategy establishes a framework for the statewide reduction of emissions of black carbon, CH_4, and fluorinated gases.

Building Energy

Title 24, Part 6. Title 24 of the California Code of Regulations was established in 1978 and serves to enhance and regulate California's building standards. Although not initially promulgated to reduce GHG emissions, Part 6 of Title 24 specifically established Building Energy Efficiency Standards that are designed to ensure new and existing buildings in California achieve energy efficiency and preserve outdoor and indoor environmental quality. These energy efficiency standards are reviewed every few years by the Building Standards Commission and CEC, and revised if necessary (California Public Resources Code [PRC] Section 25402[b][1]). The regulations receive input

[9] The threshold approaches outlined in the 2022 Scoping Plan, Appendix D, are recommendations only and are not requirements; they do not supplant lead agencies' discretion to develop their own evidence-based approaches for determining whether a project would have a potentially significant impact on GHG emissions.

from members of industry and the public, with the goal of "reducing of wasteful, uneconomic, inefficient, or unnecessary consumption of energy" (PRC Section 25402). These regulations are carefully scrutinized and analyzed for technological and economic feasibility (PRC Section 25402[d]) and cost effectiveness (PRC Sections 25402[b][2] and [b][3]). As a result, these standards save energy, increase electricity supply reliability, increase indoor comfort, avoid the need to construct new power plants, and help preserve the environment.

The 2022 Title 24 standards are the currently applicable building energy efficiency standards, and became effective on January 1, 2023. The 2022 Title 24 standards will improve upon the 2019 standards for new construction of, and additions and alterations to, residential and nonresidential buildings. The CEC adopted the 2022 Title 24 Energy Code in August 2021 and the California Building Standards Commission approved incorporating the updated code into the California Building Standards Code (CALGreen) in December 2021. The 2022 Energy Code will go into effect on January 1, 2023. The 2022 Energy Code focuses on four key areas in newly constructed homes and businesses:

- Encouraging electric heat pump technology for space and water heating, which consumes less energy and produces fewer emissions than gas-powered units.
- Establishing electric-ready requirements for single-family homes to position owners to use cleaner electric heating, cooking, and electric vehicle (EV) charging options whenever they choose to adopt those technologies.
- Expanding solar photovoltaic (PV) system and battery storage standards to make clean energy available onsite and complement the state's progress toward a 100% clean electricity grid.
- Strengthening ventilation standards to improve indoor air quality.

Title 24, Part 11. In addition to the CEC's efforts, in 2008, the California Building Standards Commission adopted the nation's first green building standards. The California Green Building Standards Code (Part 11 of Title 24) is commonly referred to as California's Green Building Standards (CALGreen), and establishes minimum mandatory standards and voluntary standards pertaining to the planning and design of sustainable site development, energy efficiency (in excess of the California Energy Code requirements), water conservation, material conservation, and interior air quality. The CALGreen standards took effect in January 2011 and instituted mandatory minimum environmental performance standards for all ground-up, new construction of commercial, low-rise residential and state-owned buildings, schools, and hospitals. The CALGreen 2019 standards, which are the current standards, became effective January 1, 2020.

Title 20. Title 20 of the California Code of Regulations requires manufacturers of appliances to meet state and federal standards for energy and water efficiency. Performance of appliances must be certified through the CEC to demonstrate compliance with standards. New appliances regulated under Title 20 include refrigerators, refrigerator-freezers, and freezers; room air conditioners and room air-conditioning heat pumps; central air conditioners; spot air conditioners; vented gas space heaters; gas pool heaters; plumbing fittings and plumbing fixtures; fluorescent lamp ballasts; lamps; emergency lighting; traffic signal modules; dishwaters; clothes washers and dryers; cooking products; electric motors; low voltage dry-type distribution transformers; power supplies; televisions and consumer audio and video equipment; and battery charger systems. Title 20 presents protocols for testing for each type of appliance covered under the regulations, and appliances must meet the standards for energy performance, energy design, water performance, and water design. Title 20 contains three types of standards for appliances: federal and state standards for federally regulated appliances, state standards for federally regulated appliances, and state standards for non-federally regulated appliances.

AB 1109. Enacted in 2007, AB 1109 required the CEC to adopt minimum energy efficiency standards for general-purpose lighting to reduce electricity consumption by 50% for indoor residential lighting and by 25% for indoor commercial lighting.

SB 1. SB 1 (Murray) (August 2006) established a $3 billion rebate program to support the goal of the state to install rooftop solar energy systems with a generation capacity of 3,000 megawatts through 2016. SB 1 added sections to the Public Resources Code, including Chapter 8.8 (California Solar Initiative), that require building projects applying for ratepayer-funded incentives for photovoltaic systems to meet minimum energy efficiency levels and performance requirements. Section 25780 established that it is a goal of the state to establish a self-sufficient solar industry. The goals included establishing solar energy systems as a viable mainstream option for homes and businesses within 10 years of adoption, and placing solar energy systems on 50% of new homes within 13 years of adoption. SB 1, also termed "Go Solar California," was previously titled "Million Solar Roofs."

California AB 1470 (Solar Water Heating). This bill established the Solar Water Heating and Efficiency Act of 2007. AB 1470 makes findings and declarations of the Legislature relating to the promotion of solar water heating systems and other technologies that reduce natural gas demand. AB 1470 defines several terms for purposes of the act. The bill required a commission to evaluate the data available from a specified pilot program, and to design and implement a program of incentives for the installation of 200,000 solar water heating systems in homes and businesses throughout the state by 2017.

Renewable Energy and Energy Procurement

SB 1078 (2002) established the Renewables Portfolio Standard (RPS) program, which requires an annual increase in renewable generation by the utilities. Initially, the RPS required utilities to obtain 20% of their power from renewable sources by 2010. SB X1-2 (2011) subsequently expanded the RPS by establishing that 33% of the total electricity sold to retail customers in California per year by December 31, 2020, and in subsequent years, be secured from qualifying renewable energy sources. SB 350 (2015) further expanded the RPS by establishing that 50% of the total electricity sold to retail customers in California per year by December 31, 2030, be secured from qualifying renewable energy sources. And SB 100 (2018) further accelerated the RPS, requiring achievement of a 50% RPS by December 31, 2026, and a 60% RPS by December 31, 2030. SB 100 also established a new state policy goal that calls for eligible renewable energy resources and zero-carbon resources to supply 100% of electricity retail sales and 100% of electricity procured to serve all state agencies by December 31, 2045.

Under the program, a renewable electrical generation facility is one that uses biomass, solar thermal, photovoltaic, wind, geothermal, fuel cells using renewable fuels, small hydroelectric generation of 30 megawatts or less, digester gas, municipal solid waste conversion, landfill gas, ocean wave, ocean thermal, or tidal current, and that meets other specified requirements with respect to its location.

SB 1368. SB 1368 (September 2006) required the CEC to develop and adopt regulations for GHG emission performance standards for the long-term procurement of electricity by local publicly owned utilities. These standards must be consistent with the standards adopted by the California Public Utilities Commission.

AB 1109. Enacted in 2007, AB 1109 required the CEC to adopt minimum energy efficiency standards for general-purpose lighting, to reduce electricity consumption 50% for indoor residential lighting and 25% for indoor commercial lighting.

EO S-14-08. EO S-14-08 (November 2008) focused on the contribution of renewable energy sources to meet the electrical needs of California while reducing the GHG emissions from the electrical sector. This EO required that all retail suppliers of electricity in California serve 33% of their load with renewable energy by 2020. Furthermore, the EO directed state agencies to take appropriate actions to facilitate reaching this target. The California Natural Resources Agency (CNRA), through collaboration with the CEC and California Department of Fish and Wildlife (formerly the California Department of Fish and Game), was directed to lead this effort.

EO S-21-09 and SBX1-2. EO S-21-09 (September 2009) directed CARB to adopt a regulation consistent with the goal of EO S-14-08 by July 31, 2010. CARB was further directed to work with the California Public Utilities Commission and CEC to ensure that the regulation builds upon the RPS program and was applicable to investor-owned utilities, publicly owned utilities, direct access providers, and community choice providers. Under this order, CARB was to give the highest priority to those renewable resources that provide the greatest environmental benefits with the least environmental costs and impacts on public health and can be developed the most quickly in support of reliable, efficient, cost-effective electricity system operations. On September 23, 2010, CARB initially approved regulations to implement a Renewable Electricity Standard. However, this regulation was not finalized because of subsequent legislation (SB X1-2, Simitian, statutes of 2011) signed by Governor Brown in April 2011.

SB X1 2 expanded the Renewables Portfolio Standard by establishing a renewable energy target of 20% of the total electricity sold to retail customers in California per year by December 31, 2013, and 33% by December 31, 2020, and in subsequent years. Under the bill, a renewable electrical generation facility is one that uses biomass, solar thermal, photovoltaic, wind, geothermal, fuel cells using renewable fuels, small hydroelectric generation (30 megawatts or less), digester gas, municipal solid waste conversion, landfill gas, ocean wave, ocean thermal, or tidal current, and that meets other specified requirements with respect to its location.

SB X1-2 applies to all electricity retailers in the state including publicly owned utilities, investor-owned utilities, electricity service providers, and community choice aggregators. All of these entities must meet the renewable energy goals previously listed.

SB 350. SB 350 (October 2015, Clean Energy and Pollution Reduction Act) further expanded the RPS by establishing a goal of 50% of the total electricity sold to retail customers in California per year by December 31, 2030. In addition, SB 350 included the goal to double the energy efficiency savings in electricity and natural gas final end uses (e.g., heating, cooling, lighting, or class of energy uses on which an energy-efficiency program is focused) of retail customers through energy conservation and efficiency. The bill also requires the California Public Utilities Commission, in consultation with the CEC, to establish efficiency targets for electrical and gas corporations consistent with this goal. Regarding mobile sources, as one of its elements, SB 350 establishes a statewide policy for widespread electrification of the transportation sector, recognizing that such electrification is required for achievement of the state's 2030 and 2050 reduction targets (see California Public Utilities Code Section 740.12).

SB 100. SB 100 (2018) increased the standards set forth in SB 350 establishing that 44% of the total electricity sold to retail customers in California per year by December 31, 2024, 52% by December 31, 2027, and 60% by December 31, 2030, be secured from qualifying renewable energy sources. SB 100 states that it is the policy of the state that eligible renewable energy resources and zero-carbon resources supply 100% of the retail sales of electricity to California. This bill requires that the achievement of 100% zero-carbon electricity resources do not increase the carbon emissions elsewhere in the western grid and that the achievement not be achieved through resource shuffling.

SB 1020. SB 1020 (September 2022) revises the standards from SB 100, requiring the following percentage of retail sales of electricity to California end-use customers come from eligible renewable energy resources and zero-carbon resources: 90% by December 31, 2035; 95% by December 31, 2040; and 100% by December 31, 2045.

Mobile Sources

State Vehicle Standards (AB 1493 and EO B-16-12). AB 1493 (July 2002) was enacted in a response to the transportation sector accounting for more than half of California's CO_2 emissions. AB 1493 required CARB to set GHG emission standards for passenger vehicles, light-duty trucks, and other vehicles determined by the state board to be vehicles that are primarily used for noncommercial personal transportation in the state. The bill required that CARB set GHG emission standards for motor vehicles manufactured in 2009 and all subsequent model years. CARB adopted the standards in September 2004. EO B-16-12 (March 2012) required that state entities under the governor's direction and control support and facilitate the rapid commercialization of zero-emissions vehicles. It ordered CARB, CEC, California Public Utilities Commission, and other relevant agencies to work with the Plug-in Electric Vehicle Collaborative and the California Fuel Cell Partnership to establish benchmarks to help achieve benchmark goals by 2015, 2020, and 2025. On a statewide basis, EO B-16-12 established a target reduction of GHG emissions from the transportation sector equaling 80% less than 1990 levels by 2050. This directive did not apply to vehicles that have special performance requirements necessary for the protection of the public safety and welfare.

As also explained in Section 3.2.1, "Federal Vehicle Standards", in March 2022, EPA reinstated California's authority under the Clean Air Act to implement its own GHG emission standards and ZEV sales mandate. EPA's action concludes its reconsideration of the 2019 SAFE-1 rule by finding that the actions taken under the previous administration as a part of SAFE-1 were decided in error and are now entirely rescinded.

EO S-1-07. Issued on January 18, 2007, EO S-1-07 sets a declining Low Carbon Fuel Standard for GHG emissions measured in CO_2e grams per unit of fuel energy sold in California. The initial target of the Low Carbon Fuel Standard was to reduce the carbon intensity of California passenger vehicle fuels by at least 10% by 2020. The Low Carbon Fuel Standard was subsequently amended in 2018 to require a 20% reduction in carbon intensity by 2030. This new requirement aligns with the California's overall 2030 target of reducing climate changing emissions to 40% below 1990 levels by 2030, set by SB 32. CARB has adopted implementing regulations for both the 10% and 20% carbon intensity reduction targets.

SB 375. SB 375 (2008) addresses GHG emissions associated with the transportation sector through regional transportation and sustainability plans. SB 375 required CARB to adopt regional GHG reduction targets for the automobile and light-truck sector for 2020 and 2035. Regional metropolitan planning organizations are then responsible for preparing a Sustainable Communities Strategy (SCS) within their Regional Transportation Plan (RTP). The goal of the SCS is to establish a forecasted development pattern for the region that, after considering transportation measures and policies, will achieve, if feasible, the GHG reduction targets. If an SCS is unable to achieve the GHG reduction target, a metropolitan planning organization must prepare an Alternative Planning Strategy demonstrating how the GHG reduction target would be achieved through alternative development patterns, infrastructure, or additional transportation measures or policies.

Pursuant to California Government Code Section 65080(b)(2)(K), an SCS does not regulate the use of land; supersede the land use authority of cities and counties; or require that a city's or county's land use policies and regulations, including those in a general plan, be consistent with it. Nonetheless, SB 375 makes regional and local

planning agencies responsible for developing those strategies as part of the federally required metropolitan transportation planning process and the state-mandated housing element process.

In 2010, CARB adopted the SB 375 targets for the regional metropolitan planning organizations. The targets adopted for SANDAG in 2010 are a 7% reduction in per-capita passenger-vehicle GHG emissions by 2020 and a 13% reduction by 2035, measured relative to 2005 GHG emissions. In 2018, CARB adopted the second round of SB 375 reduction targets, and increased SANDAG's 2020 target to a 15% reduction in per-capita passenger-vehicle GHG emissions, and the 2035 target to a 19% reduction using the same 2005 baseline.

SANDAG completed and adopted its 2050 RTP/SCS in October 2011. In November 2011, CARB, by resolution, accepted SANDAG's GHG emissions quantification analysis and determination that, if implemented, the SCS would achieve CARB's 2020 and 2035 GHG emissions reduction targets for the region.

After SANDAG's 2050 RTP/SCS was adopted, a lawsuit was filed by the Cleveland National Forest Foundation and others (*Cleveland National Forest Foundation v. San Diego Association of Governments* (2017) 3 Cal. 5th 497). regarding analysis of EO S-3-05's 2050 goal of an 80% reduction in GHG emissions from 1990 levels. The Supreme Court of California held that the Environmental Impact Report at issue was sufficient to inform the public, based on the information available at the time, about the regional plan's GHG impacts and its potential inconsistency with state climate change goals without including an explicit analysis of the consistency of projected 2050 GHG emissions with the goals in the executive order.

In 2015, SANDAG adopted the next iteration of its RTP/SCS in accordance with statutorily mandated timelines and no subsequent litigation challenge was filed. More specifically, in October 2015, SANDAG adopted San Diego Forward: The Regional Plan (SANDAG 2015). Like the 2050 RTP/SCS, San Diego Forward: Regional Plan meets CARB's 2020 and 2035 reduction targets for the region (SANDAG 2015). In December 2015, CARB, by resolution, accepted SANDAG's GHG emissions quantification analysis and determination that, if implemented, the SCS would achieve CARB's 2020 and 2035 GHG emissions reduction targets for the region. The Regional Plan was updated in 2021, which was the result of years of planning, data analysis, and community engagement to reimagine the San Diego region with a transformative transportation system, a sustainable pattern of growth and development, and innovative demand and management strategies (SANDAG 2021).

Advanced Clean Cars Program. The Advanced Clean Cars program (January 2012) is an emissions-control program for model years 2015 through 2025. The program combines the control of smog- and soot-causing pollutants and GHG emissions into a single coordinated package. The package includes elements to reduce smog-forming pollution, reduce GHG emissions, promote clean cars, and provide the fuels for clean cars. To improve air quality, CARB implemented new emission standards to reduce smog-forming emissions beginning with 2015 model year vehicles. It is estimated that by 2025, cars will emit 75% less smog-forming pollution than the average new car sold in 2012. To reduce GHG emissions, CARB, in conjunction with the EPA and NHTSA, adopted new GHG standards for model year 2017 to 2025 vehicles; the new standards are estimated to reduce GHG emissions by 34% in 2025. The zero-emissions vehicle (ZEV) program will act as the focused technology of the Advanced Clean Cars program by requiring manufacturers to produce increasing numbers of ZEVs and plug-in hybrid electric vehicles in the 2018 to 2025 model years.

The ACC II program establishes the next set of LEV and ZEV requirements for model years after 2025 to contribute to meeting federal ambient air quality ozone standards and California's carbon neutrality standards (CARB 2022c). The ACC II rulemaking package also considers technological feasibility, environmental impacts, equity, economic

impacts, and consumer impacts. The ACC II regulations were approved by the California Office of Administrative Law (OAL) and became effective on November 30, 2022.

AB 1236. AB 1236 (October 2015) (Chiu) required a city, county, or city and county to approve an application for the installation of electric vehicle charging stations, as defined, through the issuance of specified permits unless the city or county makes specified written findings based on substantial evidence in the record that the proposed installation would have a specific, adverse impact upon the public health or safety, and there is no feasible method to satisfactorily mitigate or avoid the specific, adverse impact. AB 1236 provided for appeal of that decision to the planning commission, as specified. The bill provided that the implementation of consistent statewide standards to achieve the timely and cost-effective installation of electric vehicle charging stations is a matter of statewide concern. The bill required electric vehicle charging stations to meet specified standards. AB 1236 required a city, county, or city and county with a population of 200,000 or more residents to adopt an ordinance, by September 30, 2016, that created an expedited and streamlined permitting process for electric vehicle charging stations. The bill also required a city, county, or city and county with a population of fewer than 200,000 residents to adopt this ordinance by September 30, 2017.

EO N-79-20 (September 2020) requires CARB to develop regulations as follows: (1) Passenger vehicle and truck regulations requiring increasing volumes of new ZEVs sold in the State towards the target of 100% of in-State sales by 2035; (2) medium- and heavy-duty vehicle regulations requiring increasing volumes of new zero-emission trucks and buses sold and operated in the State towards the target of 100% of the fleet transitioning to zero-emission vehicles by 2045 everywhere feasible and for all drayage trucks to be zero emission by 2035; and (3) strategies, in coordination with other State agencies, the EPA and local air districts, to achieve 100% zero-emission from off-road vehicles and equipment operations in the State by 2035. EO N-79-20 called for the development of a Zero-Emissions Vehicle Market Development Strategy, which was released February 2021, to be updated every 3 years, that ensures coordination and implementation of the EO and outlines actions to support new and used ZEV markets. In addition, the EO specifies identification of near-term actions, and investment strategies, to improve clean transportation, sustainable freight, and transit options; and calls for development of strategies, recommendations, and actions by July 15, 2021, to manage and expedite the responsible closure and remediation of former oil extraction sites as the State transitions to a carbon-neutral economy.

Advanced Clean Trucks (ACT) Regulation. The purpose of the ACT Regulation (June 2020) is to accelerate the market for zero-emission vehicles in the medium- and heavy-duty truck sector and to reduce emissions NO_x, fine particulate matter, TACs, GHGs, and other criteria pollutants generated from on-road mobile sources (CARB 2022c). Requiring medium- and heavy-duty vehicles to transition to zero-emissions technology will reduce health risks to people living in and visiting California and is needed to help California meet established near- and long-term air quality and climate mitigation targets.

EO B-16-12. EO B-16-12 (2012) directs state entities under the Governor's direction and control to support and facilitate development and distribution ZEVs. On a statewide basis, EO B-16-12 also establishes a GHG emissions reduction target from the transportation sector equaling 80% less than 1990 levels by 2050. In furtherance of this executive order, the Governor convened an Interagency Working Group on ZEVs that has published multiple reports regarding the progress made on the penetration of ZEVs in the statewide vehicle fleet.

SB 350. In 2015, SB 350 – the Clean Energy and Pollution Reduction Act – was enacted into law. As one of its elements, SB 350 establishes a statewide policy for widespread electrification of the transportation sector,

recognizing that such electrification is required for achievement of the state's 2030 and 2050 reduction targets (see California Public Utilities Code, Section 740.12).

Solid Waste

AB 939, AB 341, AB 1826, and SB 1383. In 1989, AB 939, known as the Integrated Waste Management Act (PRC Sections 40000 et seq.), was passed because of the increase in waste stream and decrease in landfill capacity. The statute established the California Integrated Waste Management Board, which oversees a disposal reporting system. AB 939 mandated a reduction of waste being disposed of where jurisdictions were required to meet diversion goals of all solid waste through source reduction, recycling, and composting activities of 25% by 1995 and 50% by 2000.

AB 341 (Chapter 476, Statutes of 2011 [Chesbro]) amended the California Integrated Waste Management Act of 1989 to include a provision declaring that it is the policy goal of the state that not less than 75% of solid waste generated be source-reduced, recycled, or composted by 2020, and annually thereafter. In addition, AB 341 required the California Department of Resources Recycling and Recovery (CalRecycle) to develop strategies to achieve the state's policy goal. CalRecycle conducted several general stakeholder workshops and several focused workshops, and in August 2015 published a discussion document titled AB 341 Report to the Legislature, which identified five priority strategies that CalRecycle believed would assist the state in reaching the 75% goal by 2020, legislative and regulatory recommendations, and an evaluation of program effectiveness (CalRecycle 2015).

AB 1826 (Chapter 727, Statutes of 2014, effective 2016) requires businesses to recycle their organic waste (i.e., food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste) depending on the amount of waste they generate per week. This law also requires local jurisdictions across the state to implement an organic waste recycling program to divert organic waste generated by businesses, including multi-family residential dwellings that consist of five or more units. The minimum threshold of organic waste generation by businesses decreases over time, which means an increasingly greater proportion of the commercial sector will be required to comply.

SB 1383 (Chapter 395, Statutes of 2016) establishes targets to achieve a 50% reduction in the level of the Statewide disposal of organic waste from the 2014 level by 2020 and a 75% reduction by 2025. CalRecycle was granted the regulatory authority required to achieve the organic waste disposal reduction targets and establishes an additional target that not less than 20% of currently disposed edible food is recovered for human consumption by 2025 (CalRecycle 2019).

Water

EO B-29-15. In response to the ongoing drought in California, EO B-29-15 (April 2015) set a goal of achieving a statewide reduction in potable urban water usage of 25% relative to water use in 2013. The term of the executive order extended through February 28, 2016, although many of the directives have since become permanent water-efficiency standards and requirements. The executive order includes specific directives that set strict limits on water usage in the state. In response to EO B-29-15, the California Department of Water Resources modified and adopted a revised version of the Model Water Efficient Landscape Ordinance that, among other changes, significantly increased the requirements for landscape water use efficiency and broadened its applicability to include new development projects with smaller landscape areas.

EO B-37-16. Issued May 2016, EO B-37-16 directed the State Water Resources Control Board to adjust emergency water conservation regulations through the end of January 2017 to reflect differing water supply conditions across the state. The State Water Resources Control Board also developed a proposal to achieve a mandatory reduction of potable urban water usage that builds off the mandatory 25% reduction called for in EO B-29-15. The State Water Resources Control Board and Department of Water Resources will develop new, permanent water use targets that build on the existing state law requirements that the state achieve 20% reduction in urban water usage by 2020. EO B-37-16 also specifies that the State Water Resources Control Board permanently prohibit water-wasting practices such as hosing off sidewalks, driveways, and other hardscapes; washing automobiles with hoses not equipped with a shut-off nozzle; using non-recirculated water in fountains and other decorative water features; watering lawns in a manner that causes runoff, or within 48 hours after measurable precipitation; and irrigating ornamental turf on public street medians.

EO N-10-21. In response to a state of emergency due to severe drought conditions, EO N-10-21 (July 2021) called on all Californians to voluntarily reduce their water use by 15% from their 2020 levels. Actions suggested in EO N-10-21 include reducing landscape irrigation, running dishwashers and washing machines only when full, finding and fixing leaks, installing water-efficient showerheads, taking shorter showers, using a shut-off nozzle on hoses, and taking cars to commercial car washes that use recycled water.

Other State Regulations and Goals

SB 97. SB 97 (Dutton) (August 2007) directed the Governor's Office of Planning and Research to develop guidelines under CEQA for the mitigation of GHG emissions. In 2008, the Governor's Office of Planning and Research issued a technical advisory as interim guidance regarding the analysis of GHG emissions in CEQA documents. The advisory indicated that the lead agency should identify and estimate a project's GHG emissions, including those associated with vehicular traffic, energy consumption, water usage, and construction activities (OPR 2007). The advisory further recommended that the lead agency determine significance of the impacts and impose all mitigation measures necessary to reduce GHG emissions to a level that is less than significant. The CNRA adopted the CEQA Guidelines amendments in December 2009, which became effective in March 2010.

Under the amended CEQA Guidelines, a lead agency has the discretion to determine whether to use a quantitative or qualitative analysis or apply performance standards to determine the significance of GHG emissions resulting from a particular project (14 CCR 15064.4[a]). The CEQA Guidelines require a lead agency to consider the extent to which a project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions (14 CCR 15064.4[b]). The CEQA Guidelines also allow a lead agency to consider feasible means of mitigating the significant effects of GHG emissions, including reductions in emissions through the implementation of project features or off-site measures. The adopted amendments do not establish a GHG emissions threshold, instead allowing a lead agency to develop, adopt, and apply its own thresholds of significance or those developed by other agencies or experts. The CNRA also acknowledged that a lead agency may consider compliance with regulations or requirements implementing AB 32 in determining the significance of a project's GHG emissions (CNRA 2009a).

With respect to GHG emissions, the CEQA Guidelines state in Section 15064.4(a) that lead agencies should "make a good faith effort, to the extent possible on scientific and factual data, to describe, calculate or estimate" GHG emissions. The CEQA Guidelines note that an agency may identify emissions by either selecting a "model or methodology" to quantify the emissions or by relying on "qualitative analysis or other performance-based standards" (14 CCR 15064.4[a]). Section 15064.4(b) states that the lead agency should consider the following

when assessing the significance of impacts from GHG emissions on the environment: the extent a project may increase or reduce GHG emissions as compared to the existing environmental setting; whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project; and the extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions (14 CCR 15064.4[b]).

EO S-13-08. EO Order S-13-08 (November 2008) is intended to hasten California's response to the impacts of global climate change, particularly sea-level rise. Therefore, the executive order directs state agencies to take specified actions to assess and plan for such impacts. The final 2009 California Climate Adaptation Strategy report was issued in December 2009 (CNRA 2009b), and an update, Safeguarding California: Reducing Climate Risk, followed in July 2014 (CNRA 2014). To assess the state's vulnerability, the report summarizes key climate change impacts to the state for the following areas: agriculture, biodiversity and habitat, emergency management, energy, forestry, ocean and coastal ecosystems and resources, public health, transportation, and water.

3.2.3 Local

City of Oceanside General Plan

The City of Oceanside's General Plan Circulation Element includes goals and policies to reduce GHG emissions within the City (City of Oceanside 2002). The following goals and policies from the City's General Plan are relevant to the Project:

Circulation Element

Policy 2.5. The City will strive to incorporate complete streets throughout the Oceanside transportation network which are designed and constructed to serve all users of streets, roads and highways, regardless of their age or ability, or whether they are driving, walking, bicycling, or using transit.

Pedestrian Facilities

Goal 5. Support walking as a primary means of transportation that in turn supports transit and bike options. A positive walking environment is essential for supporting smart growth, mixed land uses, transit oriented development, traffic calming and reducing traffic congestion and greenhouse gas emissions.

Intelligent Transportation System Technologies

Policy 4.1. The City shall encourage the reduction of vehicle miles traveled, reduction of the total number of daily and peak hour vehicle trips, and provide better utilization of the circulation system through development and implementation of TDM strategies. These may include, but not limited to, implementation of peak hour trip reduction, encourage staggered work hours, telework programs, increased development of employment centers where transit usage is highly viable, encouragement of ridesharing options in the public and private sector, provision for park-and-ride facilities adjacent to the regional transportation system, and provision for transit subsidies.

Transportation Demand Management

Policy 4.9. The City shall look for opportunities to incorporate TDM [transportation demand management] programs into their Energy Roadmap that contributes to state and regional goals for saving energy and reducing greenhouse gas emissions.

Land Use Element

Air Quality

The City will continue to cooperate with the SDAPCD Board. This will include participation in the development of the Regional Air Quality Strategy (RAQS) through cooperation with the San Diego County Air Quality Planning Team.

Bicycle Facilities

Policy A. Development shall provide Class II Bikeways (Bike Lanes) on all secondary, major, and prime arterials.

Policy D. The use of land shall integrate the Bicycle Circulation System with auto, pedestrian, and transit systems:

- Development shall provide short-term bicycle parking and long-term bicycle storage facilities such as bicycle racks, pedestal posts, and rental bicycle lockers.
- Development shall provide safe and convenient bicycle access to high activity land uses, such as schools, parks, shopping, employment, and entertainment centers.

Pedestrian

Policy A. The construction of five (5) foot wide sidewalks adjacent to the curb shall be required in all new developments and street improvements.

Transit System

Policy A. The City shall coordinate and encourage the existing bus system to serve newly developed areas.

Energy

Policy A. The City shall encourage the design, installation, and use of passive and active solar collection systems.

Policy B. The City shall encourage the use of energy efficient design, structures, materials, and equipment in all land developments or uses.

City of Oceanside Climate Action Plan

The City adopted its Climate Action Plan (CAP) on May 8, 2019 (City of Oceanside 2019). The CAP acts as a roadmap to address challenges of climate change within the City and outlines measures the City will take to make progress towards meeting the State's GHG reduction goals. The CAP includes a baseline GHG emissions inventory for 2013,

GHG emissions forecasts for 2020, 2030, 2035, 2040, and 2050, local GHG emissions reduction strategies and measures to help the City achieve the statewide targets, and implementation and monitoring mechanisms to ensure the City's measures and targets are achieved. The CAP established local GHG emissions reduction targets for future years as follows:

- by 2020, reduce GHG emissions levels to 5 MT CO_2e per capita;
- by 2030, reduce GHG emissions levels to 4 MT CO_2e per capita;
- by 2040, reduce GHG emissions levels to 3 MT CO_2e per capita; and
- by 2050, reduce GHG emissions levels to 2 MT CO_2e per capita.

The CAP was prepared in accordance with the requirements within CEQA Guidelines Section 15183.5, and the CAP Consistency Checklist was used to evaluate the Project's significance with respect to GHG emissions.

City of Oceanside Energy Climate Action Element

The Energy Climate Action Element (ECAE) of the City's General Plan was adopted on May 8, 2019 and addresses energy consumption and other activities within the City that may contribute to adverse energy and GHG impacts. The ECAE focuses on activities associated with human-induced climate change. The ECAE outlines sustainability goals and policies for the City's decision-making process including development review protocols. The primary themes and goals of the ECAE are related to energy efficiency and renewable energy, smart growth and multimodal transportation, zero waste, water conservation, urban greening, local agriculture, and sustainable consumption.

3.3 Significance Criteria and Methodology

3.3.1 Thresholds of Significance

California has developed guidelines to address the significance of GHG emissions impacts that are contained in Appendix G of the CEQA Guidelines (14 CCR 15000 et seq.). Appendix G provides that a project would have a significant environmental impact if it would:

1. Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment
2. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.

The Appendix G thresholds for GHGs do not prescribe specific methodologies for performing an assessment, do not establish specific thresholds of significance, and do not mandate specific mitigation measures. Rather, the CEQA Guidelines emphasize the lead agency's discretion to determine the appropriate methodologies and thresholds of significance consistent with the manner in which other impact areas are handled in CEQA (CNRA 2009). Additional guidance regarding assessment of GHGs is discussed below.

Global climate change is a cumulative impact; a project participates in this potential impact through its incremental contribution combined with the cumulative increase of all other sources of GHGs. There are currently no established thresholds for assessing whether the GHG emissions of a project, such as the Project, would be considered a cumulatively considerable contribution to global climate change; however, all reasonable efforts should be made

to minimize a project's contribution to global climate change. In addition, while GHG impacts are recognized exclusively as cumulative impacts (CAPCOA 2008), GHG emissions impacts must also be evaluated on a project-level under CEQA.

CEQA Guidelines

With respect to GHG emissions, the CEQA Guidelines Section 15064.4(a) states that lead agencies "shall make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate" GHG emissions resulting from a project. The CEQA Guidelines note that an agency has the discretion to either quantify a project's GHG emissions or rely on a "qualitative analysis or performance-based standards" (14 CCR 15064.4[a]). A lead agency may use a "model or methodology" to estimate greenhouse gas emissions and has the discretion to select the model or methodology it considers "most appropriate to enable decision makers to intelligently take into account the project's incremental contribution to climate change" (14 CCR 15064.4[c]). The CEQA Guidelines provide that the lead agency should consider the following when determining the significance of impacts from GHG emissions on the environment (14 CCR 15064.4[b]):

3. The extent a project may increase or reduce GHG emissions as compared to the existing environmental setting.
4. Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
5. The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions.

In addition, the CEQA Guidelines specify that "[w]hen adopting or using thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies, or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence" (14 CCR 15064.7[c]).

The extent to which a project increases or decreases GHG emissions in the existing environmental setting should be estimated in accordance with Section 15064.4, *Determining the Significance of Impacts from Greenhouse Gas Emissions*, of the State CEQA Guidelines. The State CEQA Guidelines indicate that when calculating GHG emissions resulting from a project, lead agencies shall make a good-faith effort based on scientific and factual data (Section 15064.4 (a)), and lead agencies have discretion to select the model or methodology deemed most appropriate for enabling decision makers to intelligently assess the project's incremental contribution to climate change (Section 15064.4 (c)).

The State CEQA Guidelines do not indicate an amount of GHG emissions that constitutes a significant impact on the environment. Instead, they authorize the lead agency to consider thresholds of significance previously adopted or recommended by other public agencies or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence (State CEQA Guidelines Sections 15064.4(a) and 15064.7(c)). Several agencies throughout the state have drafted and/or adopted numerical threshold approaches and guidelines for analyzing the significance of project-related GHG emissions; however, no numerical thresholds have been formally adopted by an air district or lead agency for use in the San Diego region.

Governor's Office of Planning and Research

The Governor's Office of Planning and Research's Technical Advisory, titled Discussion Draft CEQA and Climate Change Advisory (OPR 2018), states the following:

> [N]either the CEQA statute nor the CEQA Guidelines prescribe thresholds of significance or particular methodologies for perming an impact analysis. This is left to lead agency judgment and discretion, based upon factual data and guidance from regulatory agencies and other sources where available and applicable. … Even in the absence of clearly defined thresholds for GHG emissions, such emissions must be disclosed and mitigated to the extent feasible whenever the lead agency determines that the project contributes to a significant, cumulative climate change impact.

Furthermore, the advisory document indicates that "in the absence of regulatory standards for GHG emissions or other scientific data to clearly define what constitutes a 'significant impact,' individual lead agencies may undertake a project-by-project analysis, consistent with available guidance and current CEQA practice." Section 15064.7(c) of the CEQA Guidelines specifies that "when adopting thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies, or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence."

Approaches to Determining Significance

The significance of the project-related GHG emissions can be determined by evaluating the project's compliance with regulations or requirements adopted to implement statewide, regional, or local plans for the reduction or mitigation of GHG emissions. The state's 2030 target (reduce GHG emissions to 40% below 1990 levels by 2030) has been codified in law through SB 32 and the 2017 Scoping Plan (CARB 2017). Therefore, 2030 marks the next statutory statewide milestone target applicable to the project.

The City's 2019 CAP is a qualified GHG emissions reduction plan in accordance with State CEQA Guidelines Section 15183.5. CEQA Guidelines 15183.5(a) states that Lead Agencies may analyze and mitigate the significant effects of GHG emissions at a programmatic level, such as in a general plan, a long range development plan, or a separate plan to reduce GHG emissions. Later project-specific environmental documents may tier from and/or incorporate by reference the existing programmatic review. 15183.5(b) states that public agencies may choose to analyze and mitigate significant GHG emissions in a plan for the reduction of GHG emissions. Pursuant to CEQA Guidelines Sections 15064(h)(3), 15130(d), and 15183(b), a project's incremental contribution to a cumulative GHG emissions effect may be determined not to be cumulatively considerable if it complies with the requirements of a CAP.

The City's CAP seeks to align with state efforts to reduce GHG emissions while balancing a variety of community interests: e.g., quality of life, economic development, and social equity. The City of Oceanside's 2019 CAP quantified baseline and projected future GHG emissions from activities within the City. State GHG reduction efforts were first initiated by EO S-3-05 in 2005, which established a 2050 emissions target to stabilize the climate (CARB 2008). EO S-3-05 also established a 2020 GHG emissions target goal, which was later codified by the State Legislature as AB 32. EO B-30-15 then established an additional interim 2030 GHG emissions target, which was also codified by the State Legislature. and proposed City-specific measures and strategies to reduce GHG emissions in accordance with 2020 and 2030 targets codified by the State Legislature. On a per-capita basis the 2020 GHG emissions target requires that emissions be reduced to "about 10 tons per person by 2020" (CARB 2008) and the subsequent

targets require that emissions be reduced to "no more than 6 MT CO_2e per capita by 2030 and no more than 2 MT CO_2e per capita by 2050" (CARB 2017). The City's CAP established GHG reduction targets for 2030 that are more rigorous than the State's 6 MT CO_2e per capita goal. The City's goal is to achieve GHG emission levels of 4 MT CO_2e per capita by 2020, 3.5 MT CO_2e per capita by 2025, and 3.0 MT CO_2e per capita by 2040. A 2050 target of 2.0 MT CO_2e per capita is established for the City consistent with recommendations of the 2017 Scoping Plan and international agreements, such as the "Under 2 MOU," which requires that all "signatories agree to reduce their GHG emissions to two metric tons CO2E per capita by 2050." This is the most commonly agreed upon 2050 target and directly relates to the long term target of EO-S-05.

As discussed in the CAP, to ensure the City remains on track to achieve the long-term reduction goals of the State, the City has implemented GHG reduction measures proactively. The CAP measures outline how the City will reduce its near-term GHG emissions and establish infrastructure to support continued reductions beyond 2030. The City is already projected to meet state-aligned per capita near-term emissions targets (2020 and 2030), as such reduction measures in the CAP (Chapter 3 of the CAP) were selected based on their ability to achieve long-term GHG emission reductions. Measures were focused on energy, water, solid waste, transportation and land use, and agriculture and forestry. Although the City's CAP predates CARB's 2022 Scoping Plan, the City's measures are consistent with CARB's recommendations for Local Actions focused on transportation electrification, VMT reduction, and building decarbonization (CARB 2022e).

The City's CAP establishes communitywide GHG emissions reduction targets based on an efficiency/service population methodology. "Service population" is defined as the sum total of the City's residents and workforce. The City issued a policy directive in May 2023 that provides direction on CEQA-compliant analysis of GHG emissions associated with new development. The 2023 Policy Directive notes that many of the CAP measures are contingent upon the adoption of several ordinances addressing renewable energy, electric vehicle charging facilities, and preferential parking, transportation demand management (TDM), and tree canopy. Accordingly, in the interim, all projects must demonstrate that associated GHG emissions fall below one of two efficiency thresholds noted below:

- Projects that will be implemented after 2020 and prior to end of 2025 must show that GHG emissions related to both construction and operations will not exceed 3.5 MT CO_2e/service population per year.

- Projects that will be implemented after 2025 must show that GHG emissions related to both construction and operations will not exceed 3.0 MT CO_2e/service population per year.

GHG emissions are by nature a cumulative impact, therefore, project's may rely on the City's CAP to determine a project's impact on a project-level/cumulative-level basis. Chapter 4 Implementation, of the City's CAP outlines how the CAP reduction measures will be implemented and establishes a mechanism for individual development project's to evaluate their consistency with the CAP through completion of a checklist.

The City of Oceanside's CAP relies on a screening threshold based on land use size and a CAP Consistency Checklist to determine whether a project's emissions would be consistent with GHG emissions estimated within the City's CAP. Consistent with the California Air Pollution Control Officers Association (CAPCOA) CEQA and Climate Change document (CAPCOA 2008) , the City has established a bright line threshold of significance for GHG emissions impacts: 900 MT CO_2e annually, with construction-related emissions amortized over 20 years. Specifically, the City has determined that new development projects emitting less than 900 MT CO_2e annual GHG would not contribute considerably to cumulative climate change impacts, and therefore do not need to demonstrate consistency with the CAP strategies, and would be determined to not conflict with the CAP. The 900 MT CO2e bright-line threshold

represents a market capture rate of 90% of all development projects (CAPCOA 2008). The objective of the bright-line threshold is to set the emissions low enough to capture a substantial fraction of future residential and non-residential development that will be constructed to accommodate future statewide population and job growth, while setting the emission threshold high enough to exclude small development projects that will contribute a relatively small fraction of the cumulative statewide GHG emissions (CAPCOA 2008). The 90% capture rate of new development establishes a strong basis for demonstrating that cumulative reductions are being achieved across the state. Projects greater than 900 MT CO_2e would be required to show CAP Checklist consistency, which can be used to determine that the project would be consistent with the CAP. Essentially, to demonstrate that a project would comply with the CAP, requires a two-step process: the first step is a screening-level bright line threshold, which if exceeded, would require the second step, which is a CAP efficiency and CAP measures consistency analysis.

CEQA Guidelines Section 15183.5(2) states that an environmental document that relies on a GHG reduction plan for a cumulative impact analysis must identify those requirements specified in the plan that apply to the project, and if those requirements are not otherwise biding and enforceable, incorporate those requirements as mitigation measures applicable to the project. In accordance with Section 15183.5(2) of the CEQA Checklist, the CAP Checklist provides for streamlined review of projects subject to environmental review, offering an alternative to project-specific analysis of GHG emissions impacts. The Checklist is available to projects that meet locational requirements that further the City's efforts to facilitate housing and employment growth in walkable, transit-served areas, as well as projects that either 1) conform to current land use and zoning standards or 2) involve uses that would generate less GHG emissions than those allowed under current standards.

As discussed above under Section 3.3.1 Thresholds of Significance, GHG emissions are recognized exclusively as a cumulative impact (CAPCOA 2008). The CAP Consistency Checklist is used to determine project-level significance in accordance with CEQA Guidelines Section 15183.5; the measures in the CAP Consistency Checklist identify the specific requirements that must be implemented by development projects on a city-wide basis to achieve the City's identified reduction targets. The CAP addresses the cumulative impact of GHG emissions on a city-wide basis and a project's compliance with the CAP supports the City's GHG emission reduction goals.

In accordance with Section 15064.4 of the State CEQA Guidelines, GHG emissions resulting from construction and operation of the project were quantitatively estimated. The potential impacts from project-related GHG emissions were assessed based on the total increase above the existing environmental setting, which is largely formerly developed, vacant land. The GHG emissions associated with implementation of the project were estimated using industry standard and accepted software tools, techniques, and emissions factors. The significance of the project's GHG impacts is based on the project's compliance with the City's CAP measures which includes GHG efficiency metrics.

3.3.2 Approach and Methodology

3.3.2.1 Construction

Construction of the Project would result in emissions of GHG emissions primarily associated with use of off-road construction equipment, on-road haul and vendor (material delivery) truck trips, and worker vehicle trips. As discussed previously in Section 2.3.2, emissions from the construction phase of Project components were

estimated using the CalEEMod Version 2020.4.0[10]. Per preliminary project details, it is assumed that construction of the Project would begin in January 2024 and would last approximately 24 months. A detailed depiction of the construction schedule—including information regarding phasing, equipment used during each phase, haul trucks, vendor trucks, and worker vehicles—is included in Section 2.3.2. above, and complete details of the emissions calculations are provided in Appendix A, *Air Quality and Greenhouse Gas Emissions CalEEMod Output Files*. Per City Guidance, construction-related GHG emissions were amortized over 20 years and added to operational emissions to assess significance.

3.3.2.2 Operation

Operation of the Project would generate GHG emissions from mobile sources, area sources (landscape maintenance equipment), energy use, water use and wastewater generation, and solid waste (i.e., CO_2e emissions associated with landfill off-gassing). As with project construction, CalEEMod Version 2020.4.0 was used to estimate potential project-generated operational GHG emissions based on Project land uses. It was assumed that the project would be operational following the completion of construction, which would occur in 2026.

Area

The area source category calculates direct sources of GHG emissions located at the Project site including hearths and landscape maintenance equipment. This source category does not include the emissions associated with natural gas usage in space heating and water heating as these are calculated in the building energy use module of CalEEMod. The project includes a PDF that prohibits fireplaces in residential units.

Landscape maintenance includes fuel combustion emissions from equipment such as lawn mowers, roto tillers, shredders/grinders, blowers, trimmers, chain saws, and hedge trimmers, as well as air compressors, generators, and pumps. The emissions associated from landscape equipment use were estimated using CalEEMod defaults. For San Diego County, CalEEMod assumes that landscaping equipment would operate 180 days per year. To be conservative, emissions were estimated assuming that landscape maintenance equipment was powered by gasoline or diesel fuel, and not electrified.

Energy

As represented in CalEEMod, energy sources include emissions associated with building electricity and natural gas usage (non-hearth). CalEEMod default values for energy consumption were applied to each land use. The energy use from residential land uses is calculated in CalEEMod based on the Residential Appliance Saturation Survey. Energy use from the non-residential land uses is based on various studies and assessments as described in Section 7.3, *Estimating Energy Use from Other Land Uses*, of Appendix A of the CalEEMod User's Guide (CAPCOA 2021).

[10] CalEEMod is a statewide land use emissions computer model designed to provide a uniform platform to calculate construction and operational emissions from land use development projects. The model was developed for the California Air Pollution Control Officers Association in collaboration with multiple air districts across the state. Numerous lead agencies in the state, including SDAPCD, use CalEEMod to estimate GHG emissions in accordance with CEQA Guidelines Section 15064.4(a)(1).

Annual natural gas and electricity emissions were estimated in CalEEMod using default values for emissions factors for San Diego Gas and Electric (SDG&E), which would be the energy source provider for the Project. The project includes PDF-GHG-1 that ensures PV systems are installed on each building to meet 50% of forecasted electricity demand.

Mobile Sources (Motor Vehicles)

Following the completion of construction activities, the Project would generate GHG emissions from mobile sources (vehicular traffic), as a result of residents associated with the 164 residential units. The CalEEMod Version 2020.4.0 model was used to estimate daily emissions from vehicular sources (refer to Appendix A). CalEEMod Version 2020.4.0 default data, including trip rate, temperature, trip characteristics, variable start information, and emissions factors were used for the model inputs. Emission factors representing the vehicle mix and emission factors for 2026 were used to estimate emissions associated with vehicular sources.

Solid Waste

The Project would generate solid waste, and therefore, result in CO_2e emissions associated with landfill off-gassing. CalEEMod default values for solid waste generation were used to estimate GHG emissions associated with solid waste.

Water and Wastewater

Supply, conveyance, treatment, and distribution of water for the Project require the use of electricity, which would result in associated indirect GHG emissions. Similarly, wastewater generated by the project requires the use of electricity for conveyance and treatment, along with GHG emissions generated during wastewater treatment.

For additional details see Appendix A, *Air Quality and Greenhouse Gas Emissions CalEEMod Output Files*.

3.4 Impact Analysis

3.4.1 Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

and/or

Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

The City of Oceanside's CAP was adopted in May 2019 to assist the City in reducing GHG emissions to 4 MT CO_2e per capita by 2030, and 2 MT CO_2e per capita by 2050 to align with the state's targets established by EOs B-30-15 and S-3-05, respectively. According to the City's CAP, new discretionary development projects subject to CEQA review that emit less than 900 MT CO_2e annually would not contribute considerably to cumulative climate change impacts, and therefore, would be considered consistent with the CAP and associated emissions projections. Projects that exceed the 900 MT CO_2e are evaluated to determine if the CAP Consistency Checklist is applicable. In addition, pursuant to the City's May

2023 Policy Directive, a project's per service population emissions shall be determined and evaluated against the City's targets based on when a project is to be implemented to ensure that the project would comply with the CAP. As such, the evaluation presented below assess the project's consistency with the CAP through two tests: (1) CAP Consistency Checklist, and (2) per service population efficiency metric.

Project-generated GHG emissions were estimated per the methodology described in the Air Quality and Greenhouse Gas Technical Report (Section 2.3.2 and 3.3.2) and are discussed for construction and operation below. Quantification of GHG emissions is provided pursuant to CEQA Guidelines 15064.4(c) as the determination of significance is based on the CAP Consistency Checklist.

Project's Consistency with the CAP

CAP Consistency Checklist

Projects that meet one or more of the following locational criteria are eligible for using the CAP Consistency Checklist:

1. The project site is located within a designated Smart Growth Opportunity Area.
2. The project site is located with ¼ mile of a priority TOD corridor, as identified in the City's Smart and Sustainable Corridors Plan.

   Items 1 and 2 pertain to the City's focus on where development will occur. The City seeks to accommodate future housing and job growth primarily through infill and redevelopment within already urbanized areas. Specifically, the City seeks to facilitate new residential and employment-oriented development within SANDAG-designated Smart Growth Opportunity Areas and prior corridors (i.e., Coast Hwy, Mission Avenue, Oceanside Blvd, Vista Way).
3. The project is consistent with current land use and zoning designations.

   Item 3 ensures that projected growth and development along with GHG emissions would be consistent with projections included in the CAP.
4. The project requires amendment of current land use and zoning designations. As demonstrated through a detailed analysis a) consistent with the precedent in the surrounding zoning district and b) subject to third party expert review, the proposed land uses would generate less GHG emissions than those associated with uses allowed under current land use and zoning designations.

   Similar to Item 3, this measure allows for projects that require land use changes to use the CAP checklist if the projected GHG emissions would be comparable or less than the existing land use designation.

In response to Item 1, the project site is not located within a Smart Growth Opportunity Area, it is located approximately 50 feet outside a smart growth area. The project would not meet locational criteria 1.

In response to Item 2, the project site is located approximately 0.75 miles from the nearest TOD corridor. The project would not meet locational criteria 2.

In response to Item 3, the project is not consistent with the current land use and zoning designation because it requires a general plan amendment and rezone. The project would not meet criteria 3.

In response to Item 4, although the project requires a general plan amendment and rezone, it would generate less GHG emissions than those associated with the uses allowed under current land use and zoning designation. The project's development intensity (measured by vehicle trips and VMT) would be less than the current land use

designation. Table 18 below shows how the project would generate less GHG emissions than allowed uses under the existing land use and zoning designations.

Table 18. Comparison of Estimated Annual Operational Greenhouse Gas Emissions – Unmitigated

Development	Land Use Developed	CO_2	CH_4	N_2O	Refrigerants	CO_2e
		metric tons per year				
Proposed Project	164 multi-family residential units	1,142.70	1.50	0.03	1.42	1,193.10
Existing General Plan Land Use Designation (CI) and Zoning (PS)	Hospital (100 beds)	2,369.6	3.05	0.15	3.09	2,480.42
	Government Office (150)	2,835.9	2.39	0.13	3.82	2,942.16
	Highschool (1,000 students)	1,770.61	1.88	0.07	2.51	1,844.14

Notes: CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; CO_2e = carbon dioxide equivalent
See Appendix A for complete results.

Because the project would generate fewer GHG emissions than the existing land use designations, it would meet criteria 4 and would be eligible to use the CAP Consistency Checklist.

As discussed previously, CEQA Guidelines Section 15183.5(2) states that an environmental document that relies on a GHG reduction plan for a cumulative impact analysis must identify those requirements specified in the plan that apply to the project, and if those requirements are not otherwise biding and enforceable, incorporate those requirements as mitigation measures applicable to the project. In accordance with Section 15183.5(2) of the CEQA Guidelines, the CAP Checklist provides for streamlined review of projects subject to environmental review, offering an alternative to project-specific analysis of GHG emissions impacts.

Table 19 includes the CAP Checklist items and the related project consistency analysis.

Table 19. Climate Action Plan Consistency Checklist and Project Consistency

Check List Item	Project Consistency
1. On-Site Renewable Energy Supply. If the project meets one or more of the thresholds outlined in Section 3047 of the City's Zoning Ordinance, will at least 50 percent of the estimated electricity demand be met with on-site renewable emissions-free energy supply (e.g., solar photovoltaic facilities)?	**Consistent.** The Project is a residential project that includes more than 25 dwelling units, and is therefore required to comply with the on-site renewable energy supply provisions of the checklist. The Project includes roof-top solar PV, which will accommodate at least 50% of energy demand during operation.
2. Electric Vehicle Charging Facilities. If the project involves new development that requires at least five (5) parking spaces, will the project comply with the requirements of Section 3048 of the City's Zoning Ordinance?	**Consistent.** The Project includes a total of 384 parking spaces for residences and guests, and is therefore required to comply with the requirements of Section 3048 of the City's Zoning Ordinance. Per Section 3048, the Project will reserve 15% of parking spaces for zero-emission vehicles and equip 50% of those reserved spaces with Level 2 electric vehicle charging facilities.
3. Recycled Water Infrastructure. Does the City's Water Utilities Department require that the project install infrastructure to provide for recycled water service?	**Not Applicable.** The Project is not required to use recycled water.
4. Transportation Demand Management (TDM). Per Section 3050 of the City's Zoning Ordinance, does the proposed project expected to generate at least 100 daily employee commute trips, necessitating the preparation and implementation of a TDM Plan?	**Not Applicable.** The Project is a residential project and this measure does not apply.
5. Urban Forestry. Will the project comply with the minimum tree canopy and permeable surface area requirements outlined in Section 3049 of the City's Zoning Ordinance?	**Consistent.** The Project will provide a minimum of 12% tree canopy coverage and 22% permeable surface, which meets the requirements outlined in Section 3049 of the City's Zoning Ordinance.

Source of Checklist Items: City of Oceanside, 2019

As shown in Table 19, the project is consistent with the CAP Consistency Checklist adopted by the City to ensure that the emission targets identified in the CAP are achieved. Therefore, the project is not expected to generate GHG emissions that may have a significant impact on the environment, and would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs and the impact would be **less than significant**.

Per Service Population Efficiency Metric

As discussed previously, pursuant to the City's May 2023 Policy Directive, a project's GHG emissions are to be quantified and its per service population emissions determined and evaluated against the City's targets based on when a project is to be implemented to ensure that the project would comply with the City's CAP, which is presented below.

Construction Emissions

Construction of the project would result in GHG emissions primarily associated with use of off-road construction equipment, on-road haul and vendor (material delivery) truck trips, and worker vehicle trips. Emissions from the construction phase of project components were estimated using the CalEEMod Version 2022.1[11]. Per preliminary project details, it is assumed that construction of the project would begin in January 2024 and would last approximately 21 months. A detailed depiction of the construction schedule—including information regarding phasing, equipment used during each phase, haul trucks, vendor trucks, and worker vehicles—is included in Appendix B. Per City Guidance, construction-related GHG emissions were amortized over 20 years and added to operational emissions to assess significance.

Table 20 shows the estimated annual GHG construction emissions associated with the project. Complete details of the construction emissions calculations are provided in Appendix B.

Table 20. Estimated Annual Construction GHG Emissions

	CO_2	CH_4	N_2O	Refrigerant	CO_2e
Year		Metric Tons			
2024	393	0.05	0.02	0.26	400
2025	162	0.01	0.01	0.18	165
Total	555	0.06	0.03	0.44	565
				Amortized Emissions (20 years)	28.2

Source: CalEEMod Version 2022.1
Notes: GHG = greenhouse gas; CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; CO_2e = carbon dioxide equivalent. See Appendix A for complete results. <0.01 = reported value is less than 0.01.

As shown in Table 20, the estimated total GHG emissions from construction of the project would be approximately 565 MT CO_2e. When amortized over 20 years, the estimated annual GHG emissions from construction of the project would be approximately 28 MT CO_2e per year.

Operational Emissions

Operation of the project would generate GHG emissions from mobile sources, area sources (landscape maintenance equipment), energy use, water use and wastewater generation, and solid waste (i.e., CO_2e emissions associated with landfill off-gassing). As with project construction, CalEEMod Version 2022.1 was used to estimate potential project-generated operational GHG emissions based on project land uses. It was assumed that the project would be operational following the completion of construction, which would occur in 2026.

Table 21 shows the estimated annual GHG operational emissions associated with the project. As discussed above, total annual operational emissions were combined with amortized (20 years) construction emissions and compared to the recommended efficiency metric threshold. Complete details of the construction emissions calculations are provided in Appendix A.

[11] CalEEMod is a statewide land use emissions computer model designed to provide a uniform platform to calculate construction and operational emissions from land use development projects. The model was developed for the California Air Pollution Control Officers Association in collaboration with multiple air districts across the state. Numerous lead agencies in the state, including SDAPCD, use CalEEMod to estimate GHG emissions in accordance with CEQA Guidelines Section 15064.4(a)(1).

Table 21. Summary of Estimated Annual GHG Emissions

Emissions Source	MT CO_2	MT CH_4	MT N_2O	Refrigerants	MT CO_2e
Mobile	803	0.04	0.03	1.21	815
Area	139	0.16	<0.01	-	143
Energy[1]	186	0.02	<0.01	-	187
Water	3.83	0.19	<0.01	-	9.93
Waste	10.9	1.09	0.00	-	38.0
Refrigerants	-	-	-	0.21	0.21
Total	**1,142.70**	**1.50**	**0.03**	**1.42**	**1,193.10**
				Amortized Construction Emissions (20 years)	*28*
				Project Operations + Amortized Construction Total	***1,221.14***
				Service Population	*457*
				GHG Efficiency Threshold for Post-2025	*3.0*
				Project GHG Efficiency Metric	*2.67*
				Conflict with City's GHG Policy Directive?	**No**

Source: See Appendix A for complete results.
Notes: GHG = greenhouse gas; MT = metric tons; CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; CO_2e = carbon dioxide equivalent. <0.01 = reported value is less than 0.01.
1. The above energy emissions estimate assumed the use of natural gas; the Project will not include natural gas thus the energy GHG emissions would be reduced. The total GHG emissions shown are conservative.

As shown in Table 21, the Project's GHG efficiency/service population would be consistent with the City's Policy Directive of achieving no more than 3.0 MT CO_2e post-2025. Accordingly, the Project would not generate GHG emissions that would have a significant impact on the environment. The Project's GHG emissions would be **less than significant.**

Consistency with Senate Bill 32, Assembly Bill 1279, Executive Order S-3-05, and Assembly Bill 1279

EO S-3-05 identified the following goals: GHG emissions should be reduced to 2000 levels by 2010, to 1990 levels by 2020, and to 80% below 1990 levels by 2050. SB 32 establishes a statewide GHG emissions reduction target whereby CARB, in adopting rules and regulations to achieve the maximum technologically feasible and cost-effective GHG emissions reductions, shall ensure that statewide GHG emissions are reduced to at least 40% below 1990 levels by December 31, 2030. AB 1279 establishes a policy of the state to achieve net zero GHG emissions no later than 2045 and for statewide anthropogenic GHG emissions to be reduced to at least 85% below 1990 levels by 2045.

Each Scoping Plan builds upon the successful framework established by the initial Scoping Plan and subsequent updates, while also identifying new, technologically feasible, and cost-effective strategies to ensure that California meets increasingly stringent GHG reduction targets in a way that promotes and rewards innovation, continues to foster economic growth, and delivers improvements to the environment and public health, including in disadvantaged communities. The Scoping Plan updates have continued to express optimism in meeting future year targets of 2050 and 2030, as evaluated in the 2014 and 2017 Scoping Plans (respectively), and most recently, the 2045 goal addressed in the 2022 Scoping Plan under EO B-55-18, which AB 1279 codified and expanded on.

While there are no established protocols or thresholds of significance for that future year analysis, CARB forecasted in the 2014 Scoping Plan that compliance with the current Scoping Plan would put the state on a trajectory of meeting the long-term 2050 GHG goals, although the specific path to compliance was unknown at the time (CARB 2014). The 2017 Scoping Plan outlined a strategy to achieve the 2030 GHG reduction target. The proposed scenario in the 2022 Scoping Plan lays out a path not just to carbon neutrality by 2045, but also to the 2030 GHG emissions reduction target (CARB 2022b). The modeling indicates that, if the plan described in the proposed scenario is fully implemented, and done so on schedule, the state is on track to reduce its emissions to 260 MMT CO_2e by 2030 (CARB 2022b).

The City is on track to meet state-aligned emissions reduction targets for 2020 and 2030 without additional emissions reduction measures (Oceanside 2019). However, the City understands that meeting long-term reduction targets requires aggressive action. As such, the City has developed near-term local GHG emissions targets more aggressive than State targets that put the City on a trajectory consistent with the State's 2050 GHG emissions targets, which represent the level necessary to stabilize the climate in the latter part of the 21st century (Oceanside 2019). Regarding, AB 1279, it is important to note that the state's carbon neutrality goal does not preclude any individual project from emitting GHG emissions. AB 1279 codifies EO B-55-18, however, its enactment was linked to the concurrent enactment of SB 905, which requires CARB to create a Carbon Capture, Removal, Utilization, and Storage Program that, fundamentally, will sequester carbon emitted by other projects. Therefore, the state's carbon neutrality goal does not preclude all individual projects from emitting GHG emissions.

As discussed above, the project would be consistent with the CAP and, therefore, would be consistent with state GHG reduction goals and progress towards achieving carbon neutrality.

Consistency with SANDAG RTP/SCS

At the regional level, the SANDAG's RTP/SCS has been adopted for the purpose of reducing GHG emissions attributable to passenger vehicles in the San Diego region. In October 2015, SANDAG adopted its Regional Plan, which was subsequently updated in 2021. The RTP/SCS is not directly applicable to the project because the underlying purpose of the RTP/SCS is to provide direction and guidance on future regional growth (i.e., the location of new residential and nonresidential land uses) and transportation patterns throughout the City and greater San Diego County, as stipulated under Senate Bill 375. CARB has recognized that the approved RTP/SCS is consistent with Senate Bill 375. The SANDAG Regional Plan is generally consistent with the local government plans. Since the Project is within the scope of development that was anticipated in the General Plan, it would not result in growth that would conflict with the Regional Plan.

As noted above, the proposed project would not generate GHG emissions that have a significant impact on the environment because it is determined to be consistent with the City's CAP, which is the most applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs (See: Table 4.7-5). Therefore, the proposed project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases and the impact would be **less than significant**.

Summary

Based on the preceding considerations, the project would not conflict with an applicable plan adopted for the purpose of reducing GHG emissions or generate GHG emissions that would have a significant impact on the environment; therefore, the Project's impacts on GHG emissions would be **less than significant**.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Oceanside Pacifica - Const & Ops (2026)
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	1.90
Precipitation (days)	12.0
Location	33.25670785622732, -117.30359434657936
County	San Diego
City	Oceanside
Air District	San Diego County APCD
Air Basin	San Diego
TAZ	6244
EDFZ	12
Electric Utility	San Diego Gas & Electric
Gas Utility	San Diego Gas & Electric

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Condo/Townhouse	84.0	Dwelling Unit	1.64	89,040	0.00	0.00	234	—
Parking Lot	56.0	Space	0.50	0.00	0.00	0.00	—	—
Other Asphalt Surfaces	2.39	Acre	2.39	0.00	0.00	0.00	—	—

Condo/Townhouse	80.0	Dwelling Unit	1.57	84,800	0.00	0.00	223	—
City Park	7.63	Acre	7.63	0.00	332,332	332,332	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Construction	C-12	Sweep Paved Roads
Energy	E-10-A	Establish Onsite Renewable Energy Systems: Generic

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.56	annual days of extreme heat
Extreme Precipitation	3.75	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	30.1	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	0	0	0	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	1	1	1	2
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract

Exposure Indicators	—
AQ-Ozone	37.6
AQ-PM	38.6
AQ-DPM	12.2
Drinking Water	54.3
Lead Risk Housing	46.2
Pesticides	65.2
Toxic Releases	14.6
Traffic	41.8
Effect Indicators	—
CleanUp Sites	46.1
Groundwater	0.00
Haz Waste Facilities/Generators	1.80
Impaired Water Bodies	66.7
Solid Waste	0.00
Sensitive Population	—
Asthma	12.7
Cardio-vascular	19.7
Low Birth Weights	26.6
Socioeconomic Factor Indicators	—
Education	77.2
Housing	56.5
Linguistic	61.9
Poverty	73.0
Unemployment	60.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	37.4566919
Employed	22.3662261
Median HI	57.29500834
Education	—

Traffic Access	60.9
Other Indices	—
Hardship	65.9
Other Decision Support	—
2016 Voting	65.2

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	33.0
Healthy Places Index Score for Project Location (b)	28.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Project Description
Construction: Construction Phases	Project schedule
Construction: Off-Road Equipment	CalEEmod defaults with some applicant provided schedule and equipment adjustments.
Construction: Trips and VMT	Assumed an even number of trips.
Operations: Vehicle Data	Res trip gen based on transportation study. Landscape/open space modeled as "City Park" for on-site residents.
Operations: Refrigerants	Landscape/open space modeled as City Park, no refrigerants.
Operations: Hearths	Assumed 80% of fireplaces would be natural gas, with 10% electric and 10% no fireplace.
Construction: Dust From Material Movement	Balanced on-site

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.56	annual days of extreme heat
Extreme Precipitation	3.75	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	30.1	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A

Wildfire	1	0	0	N/A
Flooding	0	0	0	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	1	1	1	2
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.6
AQ-PM	38.6
AQ-DPM	12.2
Drinking Water	54.3
Lead Risk Housing	46.2
Pesticides	65.2
Toxic Releases	14.6
Traffic	41.8
Effect Indicators	—
CleanUp Sites	46.1
Groundwater	0.00
Haz Waste Facilities/Generators	1.80
Impaired Water Bodies	66.7
Solid Waste	0.00
Sensitive Population	—
Asthma	12.7
Cardio-vascular	19.7
Low Birth Weights	26.6
Socioeconomic Factor Indicators	—
Education	77.2
Housing	56.5
Linguistic	61.9
Poverty	73.0

Unemployment	60.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	37.4566919
Employed	22.3662261
Median HI	57.29500834
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	33.0
Healthy Places Index Score for Project Location (b)	28.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Project Description
Construction: Construction Phases	Project schedule
Construction: Off-Road Equipment	CalEEmod defaults with some applicant provided schedule and equipment adjustments.
Construction: Trips and VMT	Trip length reduced to 0.5 miles for trucks for HRA to estimate on-site emissions. Worker trips zeroed out because not diesel vehicles.
Operations: Vehicle Data	Res trip gen based on transportation study. Landscape/open space modeled as "City Park" for on-site residents.
Operations: Refrigerants	Landscape/open space modeled as City Park, no refrigerants.
Operations: Hearths	Assumed 80% of fireplaces would be natural gas, with 10% electric and 10% no fireplace.
Construction: Dust From Material Movement	Balanced on-site

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Oceanside Pacifica - Existing General Plan Land Use Designations
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	1.90
Precipitation (days)	12.0
Location	33.25663179221928, -117.30365726444896
County	San Diego
City	Oceanside
Air District	San Diego County APCD
Air Basin	San Diego
TAZ	6244
EDFZ	12
Electric Utility	San Diego Gas & Electric
Gas Utility	San Diego Gas & Electric

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Government Office Building	150	1000sqft	3.44	150,000	0.00	0.00	—	—
High School	1,000	Student	3.05	132,661	0.00	0.00	—	—
Hospital	100	Bed	1.64	71,576	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.56	annual days of extreme heat

Extreme Precipitation	3.75	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	30.1	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	0	0	0	N/A
Wildfire	0	0	0	N/A
Flooding	0	0	0	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	1	1	1	2
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.6
AQ-PM	38.6
AQ-DPM	12.2
Drinking Water	54.3
Lead Risk Housing	46.2
Pesticides	65.2

Toxic Releases	14.6
Traffic	41.8
Effect Indicators	—
CleanUp Sites	46.1
Groundwater	0.00
Haz Waste Facilities/Generators	1.80
Impaired Water Bodies	66.7
Solid Waste	0.00
Sensitive Population	—
Asthma	12.7
Cardio-vascular	19.7
Low Birth Weights	26.6
Socioeconomic Factor Indicators	—
Education	77.2
Housing	56.5
Linguistic	61.9
Poverty	73.0
Unemployment	60.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	37.4566919
Employed	22.3662261
Median HI	57.29500834
Education	—

Bachelor's or higher	35.78852817

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	33.0
Healthy Places Index Score for Project Location (b)	28.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for   265 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =   3287306.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:    265 Source(s);       1 Source Group(s); and     142
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    265 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  22112

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
```

Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   92.00 ; Decay
Coef. =   0.000   ; Rot. Angle =   0.0
                  Emission Units = GRAMS/SEC   ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =   3.6 MB of RAM.

 **Input Runstream File: aermod.inp

 **Output Print File: aermod.out

 **Detailed Error/Message File: Oceanside-Pacifica-OnsiteRec.err

 **File for Summary of Results: Oceanside-Pacifica-OnsiteRec.sum

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for   265 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =   3287306.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:    265 Source(s);       1 Source Group(s); and     142
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    265 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  22112

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
```

Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   92.00 ; Decay
Coef. =   0.000   ; Rot. Angle =   0.0
                  Emission Units = GRAMS/SEC   ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =   3.6 MB of RAM.

 **Input Runstream File: aermod.inp

 **Output Print File: aermod.out

 **Detailed Error/Message File: Oceanside-Pacifica-OnsiteRec.err

 **File for Summary of Results: Oceanside-Pacifica-OnsiteRec.sum

Summary of Findings

This biological technical report was prepared to provide the existing biological conditions of the project site and evaluation of the proposed Pacifica Residential Project. The project site refers to the approximately 14.55–acre project site analyzed in this report. The Pacifica Residential Project is located in the City of Oceanside in San Diego County. The North County MHCP is used as a guidance document for development projects in the City of Oceanside but has yet to be approved by the Oceanside City Council.

Dudek conducted a biological reconnaissance survey, general habitat assessment, and vegetation mapping in 2021. The site was visited again in 2022 to review conditions and ensure consistency. This report documents the results of Dudek's fieldwork and provides an analysis of the biological impacts related to the proposed project.

Based on species composition and general physiognomy, Dudek mapped one vegetation community and one land cover within the project site: disturbed habitat (9.28 acres) and urban/developed (5.27 acres). The combined project area is approximately 14.55 acres. Disturbed habitat makes up the majority of the site including the slopes around the perimeter as well as the majority of the western side. Most of the remainder of the project site consists of developed land cover, as it consists of the old footprint of Pacifica Elementary School. No jurisdictional aquatic features were documented within the project site.

Historically, the site used to be the location of the old Pacifica Elementary School, which closed down in the early 2000s and since then the site has been virtually vacant. Residential development is present to the north, south, and east of the site. Little Libby Lake is located southwest of the site within Libby Lake Park, beyond which there is more residential development.

Due to lack of suitable habitat and vegetation on the project site, no focused surveys for any sensitive or special-status species were conducted. No critical habitat for any special-status species is designated on the project site. Additionally, no special-status plants or wildlife were observed on the project site, nor are expected to occur.

The proposed project would result in permanent impacts to 4.96 acres of disturbed habitat and 5.21 acres of developed landcover (10.17 acres total) associated with the grading and development of the proposed project.

There are no significant impacts anticipated from the development of the proposed project, and only minor impacts would occur. Therefore, minimal mitigation would be required.

INTENTIONALLY LEFT BLANK

1 Introduction

1.1 Purpose of the Report

This biological technical report summarizes the methods and results of biological assessments conducted for the Pacifica Residential Project (proposed project) site to describe the existing conditions of the biological resources on the project site including vegetation, flora, wildlife, jurisdictional aquatic resources, wildlife movement, and to assess the potential for special-status species to occur. This biological technical report presents the evaluation of the biological significance of these resources and potential project impacts, and recommends measures to avoid, minimize, or mitigate potential impacts where feasible to less-than-significant levels.

1.2 Location and Project Description

1.2.1 Location

The approximately 14.55-acre project site is located west of 4991 Macario Drive and bound to the north by single-family homes fronting Claire Drive; to the south by single-family homes fronting North Redondo Drive; Roja Drive to the east, and Marblehead Bay Drive and undeveloped land to the south/southwest. The site is approximately 1 mile northwest of Highway 76, and 0.5 miles from the San Luis Rey River and the San Luis Rey Transit Center in a largely single-family residential neighborhood in the City of Oceanside, California. It is completely surrounded by residential homes, except for the south/southwest corner, where the subject property connects to a small parcel of undeveloped land owned by the City of Oceanside, which connects to Little Libby Lake and Libby Lake Park (Figure 1, Regional Location and Vicinity).

The assessor's parcel numbers assigned to the property are 122-190-19-00, 122-190-22-00 and 157-070-42-00. The project site is located on the U.S. Geological Survey 7.5-minue Morro Hill quadrangle map on Sections 3 and 4, within Township 10 and 11 South, and Range 4 West. The approximate centroid of the project site is 33°15'22.3"N 117°18'14.9"W, and onsite elevation ranges from 80-120 feet amsl (Figure 1, Regional Location and Vicinity).

1.2.2 Project Description

The proposed project consists of development of 164 three-story attached townhomes. Of the approximately 14.55-acre site, 10.17 acres would be developed. The approximately 4 acres that would not be developed consist of 20 to 30-foot-tall slopes along the southern, western, and northern perimeters of the project site. Townhomes would range in size from approximately 1,200 square feet to 1,800 square feet with two and three bedrooms and an attached two-car garage. Each townhome would include private open space in the form of a patio and/or deck. Common recreational spaces, consisting of approximately 53,700 square feet, would be designed with amenities such as tot lots, an off-leash dog park, pickle ball courts, bocce ball areas, barbecue areas, and a space for a variety of outdoor games.

Site access would be provided at the corner of Monica Circle and Macario Drive and emergency access would be provided via a new private driveway from Malaga Drive.

The proposed project would establish a Planned Development District intended to provide zoning, use regulations, and development regulations for future development of the site. A Planned Development Plan has been prepared in accordance with the City of Oceanside Zoning Ordinance – Article 17. The Planned Development Plan provides direction for the assignment of land uses, development intensities, development regulation, as well as design guidelines that will provide a framework for the specific development of the site.

The project would include a General Plan Amendment to revise the land use designation from Civic Institution (CI) to Medium Density Residential-B (MDB-R). A Zone Amendment is also proposed to revise the current zoning from Civic/Public (PS) to Planned Development (PD), with the Pacifica Planned Development Plan service as the regulating document.

2 Regulatory Context

2.1 Federal

2.1.1 Federal Endangered Species Act

The federal Endangered Species Act (ESA) of 1973 (16 USC 1531 et seq.), as amended, is administered by the U.S. Fish and Wildlife Service (USFWS) for most plant and animal species, and by the National Oceanic and Atmospheric Administration National Marine Fisheries Service for certain marine species. This legislation is intended to provide a means to conserve the ecosystems upon which endangered and threatened species depend and provide programs for the conservation of those species, thus preventing extinction of plants and wildlife. The ESA defines an endangered species as "any species that is in danger of extinction throughout all or a significant portion of its range." A threatened species is defined as "any species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range." Under the ESA, it is unlawful to take any listed species, and "take" is defined as, "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct."

The ESA allows for the issuance of incidental take permits for listed species under Section 7, which is generally available for projects that also require other federal agency permits or other approvals, and under Section 10, which provides for the approval of habitat conservation plans on private property without any other federal agency involvement. Upon development of a habitat conservation plan, USFWS can issue incidental take permits for listed species.

2.1.2 Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) was originally passed in 1918 as four bilateral treaties, or conventions, for the protection of a shared migratory bird resource. The primary motivation for the international negotiations was to stop the "indiscriminate slaughter" of migratory birds by market hunters and others. Each of the treaties protects selected species of birds and provides for closed and open seasons for hunting game birds. The MBTA protects over 800 species of birds and prohibits the take of any migratory bird or any part, nest, or eggs of any such bird. Under the MBTA, "take" is defined as pursuing, hunting, shooting, capturing, collecting, or killing, or attempting to do so (16 USC 703 et seq.). In December 2017, Department of the Interior Principal Deputy Solicitor Jorjani issued a memorandum (M-37050) that interprets the MBTA to prohibit only intentional take. Unintentional or accidental take is not prohibited (DOI 2017). Additionally, Executive Order 13186, Responsibilities of Federal Agencies to Protect Migratory Birds, requires that any project with federal involvement address impacts of federal actions on migratory birds with the purpose of promoting conservation of migratory bird populations (66 FR 3853–3856). The Executive Order requires federal agencies to work with USFWS to develop a memorandum of understanding. USFWS reviews actions that might affect these species.

Two species of eagles that are native to the United States, the bald eagle (*Haliaeetus leucocephalus*) and golden eagle (*Aquila chrysaetos*), were granted additional protection within the United States under the Bald and Golden Eagle Protection Act (16 USC 668–668d) to prevent the species from becoming extinct.

2.1.3 Clean Water Act

Pursuant to Section 404 of the Clean Water Act, the U.S. Army Corps of Engineers (USACE) regulates the discharge of dredged and/or fill material into "waters of the United States." On April 21, 2020, the Navigable Waters Protection Rule was adopted and became effective on June 22, 2020. The notable changes from the previous definition of waters of the United States is that there is a clearer definition of which waters are and are not jurisdictional, there is a new definition of "adjacency," ephemeral waters are no longer considered waters of the United States, and ditches are explicitly excluded as waters of the United States. The term "adjacent wetlands" (a subset of waters of the United States) is defined in Title 33 of the Code of Federal Regulations (CFR), Section 328.3(c)(16) (33 CFR 328.3[c][16]), as "areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas." In the absence of wetlands, the limits of USACE jurisdiction in non-tidal waters, such as intermittent streams, extend to the "ordinary high water mark" (OHWM) which is defined in 33 CFR 328.3(c)(7) as "that line on the shore established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas."

2.2 State

2.2.1 California Endangered Species Act

The California Department of Fish and Wildlife (CDFW) administers the California Endangered Species Act (CESA), which prohibits the "take" of plant and animal species designated by the California Fish and Game Commission as endangered or threatened in the state of California. Under CESA Section 86, take is defined as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." CESA Section 2053 stipulates that state agencies may not approve projects that will "jeopardize the continued existence of any endangered species or threatened species, or result in the destruction or adverse modification of habitat essential to the continued existence of those species, if there are reasonable and prudent alternatives available consistent with conserving the species or its habitat which would prevent jeopardy."

CESA defines an endangered species as "a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, or disease." CESA defines a threatened species as "a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that, although not presently threatened with extinction, is likely to become an endangered species in the foreseeable future in the absence of the special protection and management efforts required by this chapter. Any animal determined by the [California Fish and Game] Commission as rare on or before January 1, 1985, is a threatened species." A candidate species is defined as "a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that the Commission has formally noticed as being under review by the department for addition to either the list of endangered species or the list of threatened species, or a species for which the Commission has published a notice of proposed regulation to add the species to either list." CESA does not list invertebrate species.

CESA authorizes the taking of threatened, endangered, or candidate species if take is incidental to otherwise lawful activity and if specific criteria are met. These provisions also require CDFW to coordinate consultations with USFWS for actions involving federally listed species that are also state-listed species. In certain circumstances, CESA allows CDFW to adopt a CESA incidental take authorization as satisfactory for California Environmental Quality Act (CEQA) purposes based on finding that the federal permit adequately protects the species and is consistent with state law.

A CESA permit may not authorize the take of "fully protected" species that are protected in other provisions of the California Fish and Game Code, discussed further below.

2.2.2 California Fish and Game Code

Sections 3511 (birds), 4700 (mammals), 5050 (reptiles and amphibians), and 5515 (fish) of the California Fish and Game Code provide that designated fully protected species may not be taken or possessed without a permit. Incidental take of these species is not authorized by law.

Pursuant to Section 3503.5 of the California Fish and Game Code, it is unlawful to take, possess, or destroy any birds of prey; or to take, possess, or destroy any nest or eggs of such birds. Birds of prey refer to species in the orders Falconiformes and Strigiformes.

Nests of all other birds (except English sparrow [*Passer domesticus*] and European starling [*Sturnus vulgaris*]) are protected under Sections 3503 and 3513 of the California Fish and Game Code.

Pursuant to Section 1602 of the California Fish and Game Code, CDFW regulates all diversions, obstructions, or changes to the natural flow or bed, channel, or bank of any river, stream, or lake that supports fish or wildlife. Diversion, obstruction, or changes to the natural flow or bed, channel, or bank of any river, stream, or lake that supports fish or wildlife requires authorization from CDFW by means of entering into an agreement pursuant to Section 1602 of the California Fish and Game Code.

2.2.3 Porter–Cologne Water Quality Control Act

The Porter–Cologne Water Quality Control Act (Porter–Cologne Act) protects water quality and the beneficial uses of water. It applies to surface water and groundwater. Under this law, the State Water Resources Control Board develops statewide water quality plans, and the Regional Water Quality Control Boards (RWQCBs) develop regional basin plans that identify beneficial uses, water quality objectives, and implementation plans. The RWQCBs have the primary responsibility to implement the provisions of statewide plans and basin plans. Waters regulated under the Porter–Cologne Act include isolated waters that are not regulated by USACE. RWQCBs regulate discharging waste, or proposing to discharge waste, within any region that could affect a "water of the state" (California Water Code, Section 13260[a]). Waters of the state are defined as "any surface water or groundwater, including saline waters, within the boundaries of the state" (California Water Code, Section 13050[e]). Developments with impacts on jurisdictional waters must demonstrate compliance with the goals of the Porter–Cologne Act by developing stormwater pollution prevention plans, standard urban stormwater mitigation plans, and other measures to obtain a Clean Water Act Section 401 certification. If a Clean Water Act Section 404 permit is not required for the project, the RWQCB may still require a permit (i.e., Waste Discharge Requirement) for impacts to waters of the state under the Porter–Cologne Act.

2.2.4 California Environmental Quality Act

CEQA (California Public Resources Code, Section 21000 et seq.) and the CEQA Guidelines (14 CCR 15000 et seq.) require identification of a project's potentially significant impacts on biological resources and feasible mitigation measures and alternatives that could avoid or reduce significant impacts. CEQA Guidelines Section 15380(b)(1) defines endangered animals or plants as species or subspecies whose "survival and reproduction in the wild are in immediate jeopardy from one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, disease, or other factors" (14 CCR 15000 et seq.). A rare animal or plant is defined in CEQA Guidelines Section 15380(b)(2) as a species that, although not currently threatened with extinction, exists "in such small numbers throughout all or a significant portion of its range that it may become endangered if its environment worsens; or … [t]he species is likely to become endangered within the foreseeable future throughout all or a significant portion of its range and may be considered 'threatened' as that term is used in the federal Endangered Species Act." Additionally, an animal or plant may be presumed to be endangered, rare, or threatened if it meets the criteria for listing, as defined further in CEQA Guidelines Section 15380(c). CEQA also requires identification of a project's potentially significant impacts on riparian habitats (such as wetlands, bays, estuaries, and marshes) and other sensitive natural communities, including habitats occupied by endangered, rare, and threatened species.

In Title 14 of the California Code of Regulations (CCR), Section 1.72 (14 CCR, Section 1.72), CDFW defines a "stream" (including creeks and rivers) as "a body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having surface or subsurface flow that supports or has supported riparian vegetation."

In 14 CCR 1.56, CDFW's definition of "lake" includes "natural lakes or man-made reservoirs." Diversion, obstruction, or changes to the natural flow or bed, channel, or bank of any river, stream, or lake that supports fish or wildlife requires authorization from CDFW by means of entering into an agreement pursuant to Section 1602 of the California Fish and Game Code.

CDFW recognizes that all plants with California Rare Plant Rank (CRPR) 1A, 1B, 2, and some ranked 3, of the California Native Plant Society (CNPS) Inventory of Rare and Endangered Plants in California (CNPS 2022) may meet the criteria for listing as threatened or endangered and should be considered under CEQA (CDFW 2022a; CDFW 2022d). Some of the CRPR 3 and 4 plants meet the criteria for determination as "rare" or "endangered" as defined in Section 1901, Chapter 10 (Native Plant Protection Act), Division 2, of the California Fish and Game Code, as well as Section 2062 and Section 2067, Chapter 1.5 (CESA), Division 3. Therefore, consideration under CEQA for these CRPR 3 and 4 species is strongly recommended by CNPS (CNPS 2022).

For purposes of this report, animals considered "rare" under CEQA include endangered or threatened species, Birds of Conservation Concern (USFWS 2008), California Species of Special Concern (CDFW 2022a), and fully protected species.

Section IV, Appendix G (Environmental Checklist Form) of the CEQA Guidelines (14 CCR 15000 et seq.) requires an evaluation of impacts to "any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game [now CDFW] or the U.S. Fish and Wildlife Service."

The criteria used to determine the significance of impacts to biological resources under CEQA are provided in Chapter 6, Anticipated Project Impacts and Analysis of Significance.

2.3 Local

2.3.1 North County Multiple Habitat Conservation Program

The North County Multiple Habitat Conservation Program (MHCP) is a long-term regional conservation plan established to protect sensitive species and habitats in northern San Diego County. The MHCP is divided into seven Subarea Plans—one for each jurisdiction within the MHCP—that are permitted and implemented separately from one another. The City of Oceanside Subarea Plan (Subarea Plan) has been prepared and is used as a guidance document for development projects in the City of Oceanside but has not been approved or permitted (City of Oceanside 2010).

The small area designated as conserved lands west and southwest of the project site encompasses open space, and a small portion of Libby Lake and Libby Lake Park (Figure 2, City of Oceanside Preserve Planning Zones). These lands are conserved for the purpose of protecting the open space and natural habitats including lands inside and outside of NCCP (Natural Community Conservation Plan) areas. Conserved lands are those lands that are legally conserved to protect natural habitats, species, and open space, contribute to the existing and planned regional habitat preserve system, and managed to protect the open space or natural resources in the future (SANDAG 2022).

2.3.2 City of Oceanside Subarea Plan

The overall goal of the Oceanside Subarea Plan is to contribute to regional biodiversity and the viability of rare, unique, or sensitive biological resources throughout the City of Oceanside and the larger region while allowing public and private development to occur consistent with the City's General Plan and Capital Improvement Program (City of Oceanside 2010). In addition, the plan calls for the conservation of 90% to 100% of all hardline conservation areas; conservation of a minimum of 2,511 acres of existing native habitats as a biological preserve in the City of Oceanside; conservation of a minimum of 95% of rare and narrow endemic species populations within the preserve and a minimum of 80% throughout the City as a whole; and restoration of a minimum of 164 acres of coastal sage scrub habitat within the City of Oceanside, of which 145 acres will be within a wildlife corridor planning zone. Parcels within the wildlife corridor planning zone contribute to the north–south regional gnatcatcher steppingstone corridor. Although the Oceanside Subarea Plan is used as a guidance document for development projects in the City of Oceanside, the Subarea Plan has yet to be approved by the Oceanside City Council, and incidental take authority has therefore not been transferred to the City of Oceanside from USFWS and CDFW.

The Oceanside Subarea Plan identifies undeveloped lands within the City where conservation and management will achieve the Subarea Plan's biological goals while minimizing adverse effects on lands uses, economics, or private property rights. In addition, the Subarea Plan establishes preserve planning zones, the existing biological conditions and goals of which were used as foundations for their designation; however, the zones are defined for effective implementation of the Subarea Plan. The location of the project site in relation to these zones is show in Figure 2, City of Oceanside Preserve Planning Zones. Brief descriptions of the preserve planning zones are provided below:

- **Wildlife Corridor Planning Zone.** The Wildlife Corridor Planning Zone extends from U.S. Marine Corps Base Camp Pendleton south to Buena Vista Creek. This zone varies in width from 1 to 2 miles along most of its length and is centered roughly on El Camino Real and the associated San Diego Gas & Electric Company (SDG&E) electric transmission corridor. It encompasses those habitat parcels that potentially contribute to the north–south, regional gnatcatcher steppingstone corridor, recognizing that existing Preserve lands

north of the San Luis Rey River complete the steppingstone corridor connection to U.S. Marine Corps Base Camp Pendleton. The project site is located outside of the Wildlife Corridor Planning Zone. However, the Subarea Plan has specific standards for wildlife road crossings. For example, new roads or improvements to existing roads must include wildlife crossing improvements to accommodate safe animal movement between occupied habitats on either side of the road. Any new road should be located in the least environmentally damaging location.

- **Pre-Approved Mitigation Areas.** These areas represent land areas that have significant resource value and therefore will qualify for on-site mitigation credit. Development is allowed in pre-approved mitigation areas, subject to planning guidelines to avoid, minimize, and fully mitigate impacts. The project site is not located within a pre-approved mitigation area.
- **Agricultural Exclusion Zone.** This zone includes lands north of the San Luis Rey River that are planned for agricultural uses under the Oceanside General Plan. Ongoing agricultural practices may continue in this area as long as they do not remove existing natural habitats. The project site is not located within an agricultural exclusion zone.
- **Off-Site Mitigation Zone.** This zone includes all other parcels within the City of Oceanside that support natural vegetation outside of the Wildlife Corridor Planning Zone, agriculture exclusion zone, and coastal zone. The off-site mitigation zone includes several pre-approved mitigation areas. The project site is located within the City of Oceanside off-site mitigation zone (Figure 2, City of Oceanside Preserve Planning Zones).
- **Coastal Zone.** This zone all areas within the City's coastal zone where the federal Coastal Zone Management Act and California Coastal Act policies apply. The project site is not located within the coastal zone.

In addition to preserve planning zones, the Subarea Plan also identifies specific "hardline" and "softline" preserves. Generally, the Oceanside Subarea Plan describes hardline preserves as areas that are already preserved to Subarea Plan standards and softline preserves are areas specifically targeted for preservation through application of Subarea Plan standards and policies. Hardline preserves are also considered part of Focused Planning Areas. Preserve areas within the Subarea Plan area prohibit the following land uses: all forms of development, agricultural uses, active recreation, mineral extraction, landfills, itinerant worker camps, roads or other transportation facilities, most flood control projects, and brush control or fuel management, except for existing firebreaks that must be maintained for safety reasons within 100 feet of existing buildings (City of Oceanside 2010). Any implementation of these prohibited land uses within the preserve would require written concurrence from the City and CDFW and USFWS (the wildlife agencies) through an amendment process. Conditionally allowed land uses in preserve areas include passive recreation (i.e., hiking, birdwatching, and fishing); utility projects that include full restoration of temporarily impacted habitat, flood control, or siltation basins that support natural vegetation and habitat value; and maintenance of existing firebreaks adjacent to existing buildings. The project site is not located within a hardline or softline preserve.

3 Survey Methods

3.1 Literature and Database Review

Special-status plant and wildlife species present or potentially present in the project site were identified through a desktop literature search using the following sources: California Natural Diversity Database occurrence data[1] (CDFW 2022b), the Rare Plant Inventory[1] (CNPS 2022), USFWS occurrence data and critical habitat (USFWS 2022a), the San Diego Geographic Information Source (SanGIS 2022). Additionally, the U.S. Department of Agriculture's Natural Resources Conservation Service Web Soil Survey (USDA 2022a) was reviewed to determine soil types that exist within the boundary of the project site and a review of current and historical aerial photography was conducted to identify any potentially jurisdictional aquatic resources based on aerial signatures.

General information regarding wildlife species present in the region was obtained from Unitt (2004) for birds, Tremor et al. (2017) for mammals, and Stebbins (2003) and California Herps (CaliforniaHerps.com 2022) for reptiles and amphibians.

3.2 Survey Schedule

The 2021 and 2022 surveys and site conditions are presented in Table 1.

Table 1. Survey Details and Conditions

Date	Time	Survey Type	Personnel	Survey Conditions
10/22/2021	9:10 a.m.–2:37 p.m.	Biological Reconnaissance Survey, Vegetation Mapping, General Habitat Assessment	Shana Carey	70°F–83°F; 0% cloud cover, 1–5 mph wind
10/18/2022	8:00 a.m.–9:00 a.m.	Review and Confirmation of Existing Conditions	Shana Carey	71°F–77°F; 0% cloud cover, 1–5 mph wind

3.3 Vegetation Community and Land Cover Mapping

Vegetation communities were evaluated within the project site on an aerial map at a 200 scale (1 inch = 200 feet). These boundaries and locations were digitized and downloaded by Dudek geographic information system (GIS) technicians using ArcGIS software. Vegetation communities and land covers were mapped using the *Preliminary Descriptions of the Terrestrial Natural Communities of California* (Holland 1986) as modified by the County and noted in *Vegetation Communities of San Diego County* (Oberbauer et. al. 2008).

[1] U.S. Geological Survey 7.5-minute Morro Hill quadrangle and surrounding eight quadrangles: Bonsall, Fallbrook, Temecula, San Luis Rey, San Marcos, Oceanside, Las Pulgas Canyon, and Margarita Creek.

3.4 Plants

All native and naturalized plant species encountered during field surveys were identified and recorded. Scientific and common names for plant species with a California Rare Plant Rank (formerly CNPS List) follow the CNPS Inventory of Rare, Threatened, and Endangered Plants of California (CNPS 2022). For plant species without a California Rare Plant Rank, scientific names follow the Jepson Interchange List of Currently Accepted Names of Native and Naturalized Plants of California (Jepson Flora Project 2022) and common names follow the U.S. Department of Agriculture Natural Resources Conservation Service Plants Database (USDA 2022b). A cumulative list of plant species observed in the project site is presented in Appendix A. This list is not all-inclusive in that it does not include a comprehensive list of all the ornamental species observed.

3.5 Wildlife

The entire site was surveyed to identify and record all wildlife species, as detected by sight, calls, tracks, scat, or other signs. Binoculars (7×50 power) were used to aid in the identification of observed wildlife. In addition to species observed, expected wildlife use of the site was determined according to known habitat preferences of regional wildlife species and knowledge of their relative distributions in the area. No trapping or focused surveys for special-status or nocturnal species were conducted. Latin and common names of animals follow Crother (2017) for reptiles and amphibians, American Ornithological Society (AOS 2018) for birds, Wilson and Reeder (2005) for mammals, and North American Butterfly Association (NABA 2016) or San Diego Natural History Museum (SDNHM 2002) for butterflies. A cumulative list of wildlife species observed within the site is presented in Appendix B.

3.6 Special-Status Species

Special-status biological resources are defined as follows: (1) species that have been given special recognition by federal, state, or local conservation agencies and organizations due to limited, declining, or threatened population sizes; (2) species and habitat types recognized by local and regional resource agencies as special status; (3) habitat areas or vegetation communities that are unique, are of relatively limited distribution, or are of particular value to wildlife; (4) wildlife corridors and habitat linkages; or (5) biological resources that may or may not be considered special status, but are regulated under local, state, and/or federal laws.

Special-status plant species considered in this report are those that are (1) species listed by federal and/or state agencies, proposed for listing as threatened or endangered, or are candidate species (CDFW 2022d; (2) species with a CRPR (CNPS 2022); or (3) species listed on the Oceanside Subarea Plan Proposed Covered Species list (City of Oceanside 2010).

No focused surveys for special-status plants or wildlife were conducted as the proposed development footprint, site conditions (existing habitat, soils, and elevation) and site surroundings did not warrant them. There were no incidental detections of any sensitive plant or wildlife species, either through sight, calls, tracks, scat, or other signs. A summary of the dates and site conditions for the field efforts performed as part of this biological report are presented above in Table 1.

4 Physical Characteristics

4.1 Site Description

The approximately 14.55-acre project site was the site of the former Pacifica Elementary School, which was closed down and demolished in the early 2000s and is not currently being used for any other functions. Although no walled structures remain, there are remnant pavement, parking lot, and playground areas, as well as curbs, an overgrown sandbox, 4 post-shade structure, and a large field regularly mowed (for fire abatement) about every 2.5 months per the school district facilities department. There are scattered, mature, non-native ornamental trees throughout this area. Beyond these areas, the topography slightly rises as the edges of the site parcels are bounded by approximately 20' - 30' slopes up to existing single-family homes on the north, south, east, and northwest sides of the site. Additionally, the site slopes downward slightly in the southwest towards Libby Lake Park. The field and the slopes are predominantly composed of non-native, invasive plant species. In total, two vegetation communities/land covers were mapped within the project site including: disturbed habitat and urban/developed (Table 2), which are discussed in more detail in section 5.1. Elevations on site range from approximately 80 above mean sea level to 120 feet above mean sea level.

4.2 Soils

Four soil map units occur within the overall project site, however, only three soil types are mapped within the proposed development footprint: Grangeville fine sandy loam, 0% to 2% slopes; Las Flores sandy loam, 2% to 9% slopes; Las Flores loamy fine sand, 15% to 30% slopes, eroded (USDA 2022a). The other soil type is located on the extreme southern perimeter of the site where no impacts are proposed. Las Flores soils are usually slightly acidic, loamy sands on gently to strong slopes; they are found on marine terraces at elevations of less than 700 feet amsl. Grangeville soils are on alluvial fans and floodplains at elevations of 0 to 1800 feet. They are formed in moderately coarse textured alluvium dominantly derived from granitic rock sources (USDA 2022a).

4.3 Hydrology

Hydrology within the review area is typical of other developed and disturbed environs in northern San Diego county. Water falling as precipitation throughout the project site likely percolates into the ground. There is also a small in-ground drainage grate in the extreme southwest corner of the site, which likely catches water in this localized area before it leaves the site. This area was reviewed for potential wetlands or non-wetland waters (jurisdictional aquatic features), and none were observed.

INTENTIONALLY LEFT BLANK

5 Results

5.1 Vegetation Communities

One vegetation community and one land cover type were identified within the project site. As shown in Table 2 below, disturbed habitat makes up the majority of the site and includes the field area and slopes along the edges of the site. Developed land is the next largest land cover type and consists mainly of the remnant paved areas associated with the old elementary school. Figure 3, Vegetation Communities and Land Cover Types, also shows these vegetation communities and land covers.

Table 2. Vegetation Communities and Land Covers within the Project Site

Vegetation Community/Land Cover Type	Acreage
Disturbed Habitat	9.28
Urban/developed	5.27
Total	**14.55**

5.1.1 Disturbed Habitat

Disturbed habitat are areas that have been physically disturbed and are no longer recognizable as a native or naturalized vegetation association, however these areas may continue to retain soil substrate. If vegetation is present, it is almost entirely composed of non-native vegetation, such as ornamentals or ruderal exotic species (Oberbauer et. al. 2008). Examples of these areas may include graded landscapes, graded firebreaks, graded construction pads, temporary construction staging areas, off-road-vehicle trails, areas repeatedly cleared for fuel management, or areas that are repeatedly used in ways that prevent revegetation (e.g., parking lots, trails that have persisted for years).

Disturbed areas occupy 9.09 acres on site and are predominantly located within western half of the project site as well as along the northern, southern, and eastern slopes. The large field that is regularly mowed along the western side is dominated by Russian thistle *(Salsola tragus*), Bermuda grass (*Cynodon dactylon*), telegraph weed (*Heterotheca grandiflora*), and various species of bromes (*Bromus sp*.). Also present to a lesser extent is Australian saltbush (*Atriplex semibaccata*), prickly lettuce (*Lactuca serriola*), and Menzies' golden bush (*Isocoma menziesii*). Along the slopes the dominant species include hottentot fig (*Carpobrotus edulis*), wild oat *(Avena barbata*), as well as Russian thistle and various and bromes and mustards (*Brassica sp.* and *Hirschfeldia* sp.). There were several scattered native coyote brush (*Baccharis pilularis*) individuals along the perimeter slopes as well. Several non-native trees such as Brazillian peppertree (*Schinus terebinthifolia*), liquid amber (*Liquidambar styraciflua*), Mexican fan palm (*Washingtonia robusta*) and eucalyptus are also located along the slopes and edges of the disturbed habitat areas that were planted for ornamental landscaping.

One small patch of disturbed, flat-topped buckwheat (*Eriogonum fasciculatum*) occupies a portion of the disturbed habitat, growing within the project site's western slope, interspersed within a larger swath of hottentot fig. Flat-topped buckwheat is a near monoculture community that usually results from disturbance and often occurs in the coastal and foothill area of San Diego County (Oberbauer et al. 2008). Within the project site, this vegetation is not functioning as a native vegetation community due to the high disturbance, patchy cover and small size. Therefore, this area is identified on Figure 3 but the area is included as disturbed habitat.

5.1.2 Urban/Developed Land

Urban or developed land covers refer to areas that have been constructed on or otherwise physically altered to the point where vegetation is no longer present. Urban or developed areas are characterized by permanent or semi-permanent structures, hardscapes, and landscaped areas that require irrigation (Oberbauer et. al. 2008).

Developed areas occupy 5.27 acres on site and are predominantly located within eastern half of the project site and include the remnant paved areas associated with the old Pacifica Elementary School including the parking lot and playground areas, as well as curbs, sandbox, and 4 post-shade structure. There are several non-native shrubs and trees including junipers (*Juniperus sp*.), pines (*Pinus sp*.), and Japanese elm (*Ulmus parvifolia*) in this area that were planted for ornamental landscaping.

5.2 Flora and Fauna

A total of 31 plants were observed during 2021 and 2022 surveys, including 6 native (19%) and 25 non-native (81%) species. A cumulative list of plant species observed by Dudek is presented in Appendix A, Plant Species List. Latin and common names for plant species with a CRPR follow the CNPS On-Line Inventory of Rare, Threatened, and Endangered Plants of California (CNPS 2022). For plant species without a CRPR, Latin names follow the Jepson Interchange List of Currently Accepted Names of Native and Naturalized Plants of California (Jepson Flora Project 2022) and common names follow the California Natural Community list (CDFW 2022c).

A total of 8 wildlife species were observed during 2021 and 2022 surveys, all of which were birds commonly found in the region. All wildlife species observed or detected during the surveys were recorded and are presented in Appendix B, Wildlife Species List. Latin and common names of animals follow Crother (2017) for reptiles and amphibians, American Ornithological Society (AOS 2018) for birds, Wilson and Reeder (2005) for mammals, and North American Butterfly Association (NABA 2016) or San Diego Natural History Museum (SDNHM 2002) for butterflies.

5.3 Special-Status Plants

No special-status plants were observed during surveys in 2021 or 2022. No special-status plants are expected to occur within the project site. Out of an abundance of caution, a search of CDFW and USFWS databases was conducted for the following species as they are known to occur in disturbed soils.

This search indicated that the nearest known occurrence of thread-leaved brodiaea (*Brodiaea filifolia*), listed as a California endangered 1B.1 rare plant, is approximately 1.5 miles away near Windmill Canyon within the Marine Corps Camp Pendleton base. The nearest known occurrence of Orcutt's brodiaea (*Brodiaea orcuttii*), also listed as a California endangered 1B.1 rare plant, is approximately 3.8 miles northwest also within Camp Pendleton (CDFW 2022b). In addition, the site does not contain clay soils so the likelihood of brodiaea occupation is not expected. Lastly, the site has a long history of disturbance and repeated mowing. Cumulatively, all of these factors create an environment on site that is not likely to support these species, and therefore they are not expected to occur on site.

A search of the California Natural Diversity Database (CDFW 2022b) occurrences shows a record of Parry's tetracoccus (*Tetracoccus dioicus*), listed as a California endangered 1B.2 rare plant, overlapping the site in 1966. Parry's tetracoccus typically occurs in coastal sage scrub and chaparral; this habitat type does not currently exist on the site but may have been present historically as the elementary school was opened in 1980. Due to the large span of time

since the species was documented on site (over 50 years), coupled with the repeated disturbance and regular mowing, the project site is not likely to support this species, and therefore it is not expected to occur on site.

There is no federally designated critical habitat (USFWS 2022b) for special-status plants located within the project site.

5.4 Special-Status Wildlife

No special-status wildlife were observed during surveys in 2021 or 2022. No special-status wildlife species are expected to occur within the project site. A discussion of sensitive species that have either been documented in the vicinity or have historically been present in the vicinity is included below.

A search of the California Natural Diversity Database (CDFW 2022b) shows records of two different sensitive wildlife species overlapping the site: tricolored blackbird (*Agelaius tricolor*), and Stephen's kangaroo rat (*Dipodomys stephensi*). The Stephen's kangaroo rat record overlapping the site is from 1988. It is highly unlikely that this species still remains in the area due to the nature of the heavy residential development and disturbance in the area and on the site which has greatly reduced the species' habitat. The tricolored blackbird was recorded in the area most recently in 2014; likely due to the close proximity of the marsh and Little Libby Lake. The species may seldomly fly over or land on the site but is not expected to remain on site as there is no suitable habitat for breeding or foraging.

Additionally, there is no federally designated critical habitat (USFWS 2022b) for special-status wildlife located within the project site or in the immediate vicinity.

5.5 Jurisdictional Aquatic Resources

No potential wetland or non-wetland waters, jurisdictional aquatic features, or associated riparian habitat were documented within the project site.

5.6 Wildlife Corridors/Habitat Linkages

The project site is located outside of the Wildlife Corridor Planning Zone designated by the Oceanside Subarea Plan (City of Oceanside 2010) (Figure 2). The site is almost completely surrounded by development, which limits movement of larger mammals. The project site is also relatively isolated from large undeveloped areas as well as habitat preserves and does not support habitat essential for the movement of wildlife species.

Urban-adapted species that could commonly occur in the disturbed areas within the project site include California ground squirrel (*Spermophilus [Otospermophilus] beecheyi*), desert cottontail (*Sylvilagus audubonii*), coyote (*Canis latrans*), western fence lizard (*Sceloporus occidentalis*), common side-blotched lizard (*Uta stansburiana*), horned lark (*Eremophila alpestris*), American crow (*Corvus brachyrhynchos*), house finch (*Haemorhous mexicanus*), and killdeer (*Charadrius vociferus*). These species may use the project site as a local foraging location while utilizing the adjacent park and lake.

6 Anticipated Project Impacts and Analysis of Significance

This section addresses direct, indirect, and cumulative impacts to biological resources that would result from implementation of the proposed project.

Direct impacts are defined as those that result in the direct removal of a biological resource through clearing, grubbing, and/or grading. These impacts are further classified as temporary or permanent: temporary impacts primarily result from staging or work areas outside the permanent footprint that will be restored to its pre-project conditions, and permanent impacts refer to the buildings, roads, and other permanent structures. Indirect impacts primarily result from adverse "edge effects" as either short-term indirect impacts related to construction activities or long-term indirect impacts associated with the proximity of apartments to open space areas.

Cumulative impacts refer to incremental individual environmental effects over the long-term implementation of the project when considered together with other impacts from other projects in the area. These impacts taken individually may be minor, but can become collectively significant as they occur over a period of time.

6.1 Explanation of Findings of Significance

Impacts to special-status vegetation communities, special-status plants, special-status wildlife species, jurisdictional resources, and wildlife movement must be quantified and analyzed to determine whether such impacts are significant under CEQA. CEQA Guidelines Section 15064(b) states that an ironclad definition of "significant" effect is not possible because the significance of an activity may vary with the setting. Appendix G of the Guidelines, however, does provide "examples of consequences which may be deemed to be a significant effect on the environment" (14 CCR 15064[e]). These effects include substantial effects on rare or endangered species of animals or plants or the habitat of the species. Guidelines Section 15065(a) is also helpful in defining whether a project may have "a significant effect on the environment." Under that section, a proposed project may have a significant effect on the environment if the project has the potential to: (1) substantially degrade the quality of the environment; (2) substantially reduce the habitat of a fish or wildlife species; (3) cause a fish or wildlife population to drop below self-sustaining levels; (4) threaten to eliminate a plant or animal community; (5) substantially reduce the number or restrict the range of an endangered, rare or threatened species; or (6) eliminate important examples of the major period of California history or prehistory.

6.2 Definition of Impacts

6.2.1 Direct Impacts

Direct, permanent impacts refer to the absolute and permanent physical loss of a biological resource due to clearing and grading associated with implementation of the proposed project. Direct, permanent impacts are analyzed in four ways: (1) permanent loss of vegetation communities and land covers, and general wildlife and their habitat; (2) permanent loss of or harm to individuals of special-status plant and wildlife species; (3) permanent loss of suitable habitat for special-status species; or (4) permanent loss of wildlife movement and habitat connectivity in the project vicinity.

Direct, temporary impacts refer to a temporal loss of vegetation communities and land covers resulting from vegetation and land cover clearing and grading associated with implementation of the proposed project. The main criterion for direct, temporary impacts is that impacts would occur for a short period of time and would be reversible.

6.2.2 Indirect Impacts

Indirect impacts are reasonably foreseeable effects caused by project implementation on remaining or adjacent biological resources outside the direct disturbance zone that may occur during grading or maintenance activities (i.e., short-term construction-related indirect impacts) or later in time as a result of the program (i.e., long-term, or operational, indirect impacts). Short-term indirect impacts can include dust, human activity, pollutants (including potential erosion), and noise that extend beyond the identified construction area. Long-term indirect impacts can include changes to hydrology, introduction of invasive species, dust, and noise that are operations related or occur over the long term.

For each of the following impact sections, direct and indirect impacts for biological resources are identified and a significance determination is made for each impact. For each significant impact, mitigation measures that would reduce the impact to less than significant are proposed.

6.3 Impacts to Vegetation Communities and Land Covers

The proposed project would result in permanent direct impacts through grading and development of the proposed project within the project site. These impacts are summarized in Table 3 below and shown on Figure 4, Proposed Impacts to Vegetation Communities and Land Cover Types.

Table 3. Permanent Impacts to Vegetation Communities and Land Covers

Vegetation/Land Cover Type	Acreages		Mitigation
	Total	*Impact*	
Disturbed habitat	9.28	4.96	None required
Urban/developed	5.27	5.21	None required
Total[a]	**14.55**	**10.17**	**None required**

Notes:
[a] Per Table 5-2 in the Subarea Plan (City of Oceanside 2010).

The project is expected to permanently impact 4.96 acres of disturbed habitat and 5.21 acres of urban/developed land. These impacts are considered less than significant per Table 5-2, Mitigation Standards for Impacts to Natural Vegetation and Habitat, in the Subarea Plan (City of Oceanside 2010), and no mitigation is required.

6.4 Impacts to Special-Status Plant Species

The project is not expected to directly or indirectly impact populations of special-status plant species since none have the potential to occur within the project site.

6.5 Impacts to Special-Status Wildlife Species

The project is not expected to directly or indirectly impact special-status wildlife species since none have the potential to occur within the project site.

6.5.1 Other Protected Species

The California Fish and Game Code protects bird nests and the MBTA prohibits the intentional take of any migratory bird or any part, nest, or eggs of any such bird. Construction-related ground-disturbing activities (clearing, grubbing, grading) or other activities that result in the removal of vegetation that occur during the nesting bird season, or any impacts to active nests or the young of nesting bird species, as well as impacts to raptors that could nest in the mature ornamental trees on site, would be potentially significant. This impact shall be mitigated to less than significant through nesting bird surveys and establishment of appropriate buffers, as described in MM-BIO-1 (Nesting Bird Surveys), provided in Section 7.1.

6.6 Impacts to Jurisdictional Aquatic Resources

There are no potential waters or features present within the project site, so no direct or indirect impacts to jurisdictional aquatic resources would occur as a result of project implementation.

6.7 Impacts to Wildlife Corridors/Habitat Linkages

The project site is located outside of the Wildlife Corridor Planning Zone designated by the Oceanside Subarea Plan, so no direct or indirect impacts to wildlife corridors or habitat linkages would occur as a result of the proposed project.

6.8 Cumulative Impacts

The cumulative project site is the area covered by the Oceanside Subarea Plan (City of Oceanside 2010). Direct impacts to special-status plants and special-status wildlife are not expected to occur due to project implementation and therefore would not contribute to any cumulative sensitive species impacts. The project would implement standard best management practices. As with all other projects, the proposed project would be required to comply with the California Fish and Game Code and MBTA to avoid impacts to nesting birds. Therefore, the project is not anticipated to result in significant cumulative impacts to regional biological resources.

INTENTIONALLY LEFT BLANK

7 Avoidance, Minimization, and Mitigation Measures

There are no potential direct or indirect significant impacts anticipated to vegetation communities, special-status species, jurisdictional resources, or wildlife corridors/habitat linkages as a result of this project.

7.1 Minimization and Mitigation Measures

The following minimization and mitigation measures shall be implemented to reduce potential direct and indirect impacts to less than significant.

MM-BIO-1 **Nesting Bird Surveys.** To avoid any direct impacts to raptors and/or any migratory birds protected under the Migratory Bird Treaty Act (16 USC 703 et seq.) and Fish and Game Code (3503 and 3503.5), removal of habitat shall occur outside of the nesting season for these species (i.e., outside of February 15 through August 31, annually). If, however, removal of habitat must occur during the nesting period, the proposed Project applicant or its designee shall retain a biologist to conduct a pre-construction survey to determine the presence or absence of nesting birds in the proposed area of disturbance. The pre-construction survey must be conducted within 72 hours prior to the start of construction and shall be repeated if construction activities discontinue for more than 3 consecutive days.

Impacts to active nests are typically avoided as follows. Clearing and construction shall be postponed or halted within the following buffers to be established by the biologist: (1) no work within 50 feet of a non-listed and non-raptor avifauna nest; and (2) no work within 500 feet of a raptor nest. Raptor nests are not anticipated within the immediate Project site due to lack of suitable nesting habitat, however, trees within 500 feet of the Project boundary could support raptor nesting. The construction avoidance area shall be clearly demarcated in the field with highly visible construction fencing or flagging, and construction personnel shall be instructed on the sensitivity of nest areas. To the extent possible, the no-construction buffer zones shall be avoided until the nesting cycle is complete. However, it may be reasonable for the City to reduce these buffer widths depending on site conditions. If construction-related activities must take place within an active nest buffer area, the proposed project applicant or its designee shall present a plan the City with measures to monitor and minimize impacts to nesting birds. No ground-disturbance activities shall occur within the avoidance buffer zone until the qualified biologist has determined that the nest is no longer active and the young are not dependent on the nest.

Subject: Negative Cultural Resources Inventory Report for the Pacifica Elementary Project, City of Oceanside, California

Dear Ms. Crooker:

The following letter report summarizes the negative results of the cultural resources inventory conducted for the Pacifica Elementary Project (Project), located in the City of Oceanside, California (Figure 1). This cultural resources investigation was conducted in accordance with the California Environmental Quality Act (CEQA) and the City of Oceanside Guidelines for historical resources. The City of Oceanside (City) is the CEQA Lead Agency for the Project. In accordance with CEQA, Dudek performed a cultural resources inventory for the entire Project area. The Project area consists of the approximately 14.55-acre property (Figure 2).

A South Coastal Information Center (SCIC) records search identified no previously recorded cultural resources within the Project area. A Native American Heritage Commission (NAHC) Sacred Lands File (SLF) search was requested, and results were negative. An intensive pedestrian survey of the Project did not identify any cultural resources or built environment resources within the Project area. The review of the historic aerials reveals that all native topsoils that would have had the potential to contain cultural deposits have been removed from the Project area. The Project area has been entirely disturbed by ground-disturbing activities related to the development of a reservoir, earthen dam, and the grading and development of a public elementary school. Artificial fill is located to depths ranging between 2 to 25.5 feet below existing grade (GeoTek, Inc. 2022). No prehistoric or historic age resources will be present within the fill sediment.

Dudek's cultural resources inventory of the Project indicates that there is a low sensitivity of identifying intact subsurface cultural resources deposits during Project implementation. No further archaeological efforts or mitigation, including archaeological monitoring, are recommended to be necessary in support of implementation of the Project.

1 Project Description and Location

The Project area is located at 4991 Macario Drive in the City of Oceanside, California in northwest San Diego County. The Project site falls within Sections 4 and 33 of Township 10 South, 11 South, Range 4 West of the Morro Hill, California 7.5-minute U.S. Geological Survey Topographic Quadrangle Map (Figure 1). The Project area is bound by residential properties to the north and south, a sewer lift station, Macario Drive, and single-family dwellings to the east, and vacant land and Libby Lake to the west. The San Luis Rey River is located approximately 0.4 miles southeast of the Project area.

The proposed Project consists of a for-sale 164-unit Planned Development Community to be developed on a 14.55-acre site located at the former Pacifica Elementary School site at 4991 Macario Drive. The neighborhood will consist of three-story attached townhomes oriented towards internal paseos and drives throughout the site. New homes will range in size from a minimum of approximately 1200 square feet to 1800 square feet with two (2) to three (3) bedrooms and an attached 2-car garage (either side-by-side or tandem configuration). Each home will include private open space in the form of a patio and/or deck. Common recreational spaces, consisting of approximately 53,700 square feet of open space, will be designed with urban-style amenities such as tot lots, an off-leash dog space, pickle ball courts, bocce ball areas, barbecue areas, and space fora variety of outdoor games.

The new community will blend into the surrounding neighborhood by keeping the existing slopes along the internal property lines as well as remaining open without gates at the main entry drive into the site. Architectural and landscape styles will reflect the traditional neighborhood. Buildings will be designed to engage and enhance an interconnected series of landscaped pathways and sidewalks along internal drives out to the surrounding streets to support convenient, safe, and efficient pedestrian movements that promote walkability and transit use. The Project area consists of the approximately 14.55-acre property encompassing Assessor Parcel Numbers (APNs) 122-190-22-00, 122-190-19-00, and 157-070-42-00 (Figure 2).

2 Regulatory Framework

The City is the Lead Agency for compliance with the CEQA. This study is compliant with cultural resource regulations that apply to the Project area including provisions for the California Register of Historic Resources (CRHR), Native American Historic Cultural Sites (California Public Resources Code section 5097 et seq.), the California Native American Graves Protection and Repatriation Act, CEQA, California Health and Safety Code section 7050.5 and Public Resources Code Section 5097.98, Assembly Bill Number 52, and the City's Guidelines.

2.1 The California Register of Historic Resources (Public Resources Code section 5020 et seq.)

Under CEQA, the term "historical resource" includes but is not limited to "any object, building, structure, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California" (California Public Resources Code section 5020.1(j)). In 1992, the California legislature established CRHR "to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change" (California Public Resources Code section 5024.1(a)). A resource is eligible for listing in the CRHR if the State Historical Resources Commission determines that it is a significant resource and that it meets any of the following National Register of Historic Places (NRHP) criteria:

- Associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
- Associated with the lives of persons important in our past.

- Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
- Has yielded, or may be likely to yield, information important in prehistory or history.

(California Public Resources Code section 5024.1(c).) Resources less than 50 years old are not considered for listing in the CRHR, but may be considered if it can be demonstrated that sufficient time has passed to understand the historical importance of the resource (see 14 CCR, section 4852(d)(2)).

The CRHR protects cultural resources by requiring evaluations of the significance of prehistoric and historic resources. The criteria for the CRHR are nearly identical to those for the NRHP, and properties listed or formally designated as eligible for listing on the NRHP are automatically listed on the CRHR, as are the state landmarks and points of interest. The CRHR also includes properties designated under local ordinances or identified through local historical resource surveys. The State Historic Preservation Officer maintains the CRHR.

2.2 Native American Historic Cultural Sites (California Public Resources Code section 5097 et seq.)

State law addresses the disposition of Native American burials in archaeological sites and protects such remains from disturbance, vandalism, or inadvertent destruction; establishes procedures to be implemented if Native American skeletal remains are discovered during construction of a project; and establishes the NRHC to resolve disputes regarding the disposition of such remains. In addition, the Native American Historic Resource Protection Act makes it a misdemeanor punishable by up to 1 year in jail to deface or destroy an Indian historic or cultural site that is listed or may be eligible for listing in the CRHR.

2.3 California Native American Graves Protection and Repatriation Act

The California Native American Graves Protection and Repatriation Act (California Repatriation Act), enacted in 2001, required all state agencies and museums that receive state funding and that have possession or control over collections of human remains or cultural items, as defined, to complete an inventory and summary of these remains and items on or before January 1, 2003, with certain exceptions. The California Repatriation Act also provides a process for the identification and repatriation of these items to the appropriate tribes.

2.4 California Environmental Quality Act

As described further below, the following CEQA statutes and CEQA Guidelines are of relevance to the analysis of archaeological and historic resources:

1. California Public Resources Code section 21083.2(g): Defines “unique archaeological resource.”
2. California Public Resources Code section 21084.1 and CEQA Guidelines section 15064.5(a): Define historical resources. In addition, CEQA Guidelines section 15064.5(b) defines the phrase “substantial adverse change in the significance of an historical resource;” it also defines the circumstances when a project would materially impair the significance of a historical resource.

3. California Public Resources Code section 5097.98 and CEQA Guidelines section 15064.5(e): Set forth standards and steps to be employed following the accidental discovery of human remains in any location other than a dedicated ceremony.
4. California Public Resources Code sections 21083.2(b)-(c) and CEQA Guidelines section 15126.4: Provide information regarding the mitigation framework for archaeological and historic resources, including options of preservation-in-place mitigation measures; preservation-in-place is the preferred manner of mitigating impacts to significant archaeological sites because it maintains the relationship between artifacts and the archaeological context, and may also help avoid conflict with religious or cultural values of groups associated with the archaeological site(s).

Under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource" (California Public Resources Code section 21084.1; CEQA Guidelines section 15064.5(b)). If a site is either listed or eligible for listing in the CRHR, or if it is included in a local register of historic resources, or identified as significant in a historical resources survey (meeting the requirements of California Public Resources Code section 5024.1(q)), it is a "historical resource" and is presumed to be historically or culturally significant for purposes of CEQA (California Public Resources Code section 21084.1; CEQA Guidelines section 15064.5(a)). The lead agency is not precluded from determining that a resource is a historical resource even if it does not fall within this presumption (California Public Resources Code section 21084.1; CEQA Guidelines section 15064.5(a)).

A "substantial adverse change in the significance of an historical resource" reflecting a significant effect under CEQA means "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired" (CEQA Guidelines section 15064.5(b)(1); California Public Resources Code section 5020.1(q)). In turn, the significance of a historical resource is materially impaired when a project:

1. Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or
2. Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or
3. Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a lead agency for purposes of CEQA.

See Section 1.2.2, below for a discussion of the CEQA guidelines for determining significance and mitigating impacts to unique archaeological resources.

2.5 California Health and Safety Code section 7050.5 and Public Resources Code Section 5097.98

CEQA Guidelines Section 15064.5 assigns special importance to human remains and specifies procedures to be used when Native American remains are discovered. As described below, these procedures are detailed in California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98.

California law protects Native American burials, skeletal remains, and associated grave goods, regardless of their antiquity, and provides for the sensitive treatment and disposition of those remains. Health and Safety Code Section 7050.5 requires that if human remains are discovered in any place other than a dedicated cemetery, no further disturbance or excavation of the site or nearby area reasonably suspected to contain human remains shall occur until the County coroner has examined the remains (California Health and Safety Code Section 7050.5[b]). If the coroner determines or has reason to believe the remains are those of a Native American, the coroner must contact the NAHC within 24 hours (California Health and Safety Code Section 7050.5[c]). In accordance with California Public Resources Code Section 5097.98(a), the NAHC will notify the Most Likely Descendant (MLD). With the permission of the landowner, the MLD may inspect the site of discovery. Within 48 hours of being granted access to the site, the MLD may recommend means of treatment or disposition, with appropriate dignity, of the human remains and associated grave goods.

2.6 Assembly Bill 52

California Assembly Bill 52, which took effect July 1, 2015, establishes a consultation process between California Native American Tribes and lead agencies in order to address tribal concerns regarding project impacts and mitigation to "tribal cultural resources" (TCR). Public Resources Code section 21074(a) defines TCRs and states that a project that has the potential to cause a substantial adverse change to a TCR is a project that may have an adverse effect on the environment. A TCR is defined as a site, feature, place, cultural landscape, sacred place, and object with cultural value to a California Native American tribe that is either:

1. listed or eligible for listing in the CRHR or a local register of historical resources, or
2. determined by a lead agency to be a TCR.

2.7 City of Oceanside Guidelines

Chapter 14A of the City of Oceanside Municipal Code, referred to as the Historical Preservation Ordinance, identifies evaluation criteria under which a historical site or area may be designated (City of Oceanside 2017: Section 14A.6, Ordinance No. 82-14, Section 1, 9-8-82):

a) It exemplifies or reflects special elements of the city's cultural, social, economic, political, aesthetic, engineering, or architectural history; or

b) It is identified with persons or events significant in local, state, or national history; or

c) It embodies distinctive characteristics of a style, type, period, or method of construction, or is a valuable example of the use of indigenous materials or craftsmanship; or

d) It is representative of the notable work of a builder, designer, or architect; or

e) It is found by the council to have significant characteristics which should come under the protection of this chapter.

3 Methods

3.1 Records Search

3.1.1 Previous Cultural Resources Reports

Dudek requested a records search at the South Coastal Information Center (SCIC) at San Diego State University for the Project area and a 1-mile radius around the Project area on October 28, 2021. The record search identified 56 previous cultural resources studies have been conducted within 1-mile of the Project area. Two of these previous studies intersect the current Project area and are listed in Table 1 below. These studies include an archaeological survey and a cultural and historical resources study. These studies have addressed a small portion (10%) of the Project area. The studies that do not intersect the Project area and not listed below in Table 1 are included in Confidential Appendix A.

Table 1. Reports Intersecting the Project Area

Report Number	Authors	Date	Title
SD-01306	RECON	1978	An Archaeological Survey for Whelan Ranch
SD-14069	ASM Affiliates, Inc.	2011	Cultural and Historical Resource Study for the City of Oceanside General Plan- Circulation Element update Program Environmental Impact Report (PEIR)

3.1.2 Previously Recorded Cultural Resources

The SCIC records search also revealed that no cultural resources have been recorded within the Project area. The records search identified a total of 32 cultural resources within the 1-mile search radius of the Project area (Table 2). Of the total 32 resources identified in the 1-mile search radius of the Project area, 26 are prehistoric resources, five are historic resources, and one is a multicomponent site. No historic addresses have been recorded within the Project area, however, one historic address is located within the within the 1-mile search radius of the Project area. The results of the records search and all DPR forms are attached as part of Confidential Appendix A.

Table 2. Previously Recorded Cultural Resources in the 1-Mile Record Search Radius

Primary Number	Trinomial	Age	Description	In/ Out of Project Area
P-37-001248	CA-SDI-001248	Prehistoric	Bedrock Milling Site with lithic scatter	Out

P-37-038469	-	Historic	Single-family housing	Out

3.2 Archival Research

In addition to the SCIC records search, Dudek conducted an on-line review of historic aerial photographs and topographic (topo) maps of the Project area and general vicinity, to determine the possible development and land us of the Project area in the past. Historic aerials photographs of the Project area were available for 1938, 1946, 1953, 1964, 1967, 1978, 1980-1986, 1988, 1989-1991, 1993- 2000, 2002, 2003, 2005, 2009, 2010, 2012, 2014, 2016, 2018, and 2020 (NETR 2021a). The 1946 aerial shows grading within the center of the Project area. In the 1953 aerial, a reservoir is observed in the Project area. The 1964 aerial reveals that the reservoir has reduced further in size and grading is seen within the southwestern section of the Project area. The construction of a residential development is observed immediately to the south of the Project area. In the 1967 aerial, the reservoir appears to have been drained and residential development is observed to the east of the Project area. In the 1978 aerial, the Project area has been graded, and the first building appears in the form of a large 210-feet by 240-feet school building on the northeast end of the Project area. Residential development is observed to the north and east of the Project area. No drastic changes are observed in the 1981 to 1983 aerials. In the 1984 aerial, a paved parking lot surrounds the building in the northeast section of the Project area. No drastic changes are observed on the 1985 to 1993 aerials. In the 1994 aerial, a modular classroom building to the west of the large, primary building is observed. A residential development is observed to the west of the Project Area. No drastic changes are observed on the 1995 to 1997 aerials. In the 1998 aerial, a standing shade structure is observed to the south of the modular classroom. No drastic changes are observed on the 1999 to 2022 aerials. In the 2003 aerial, a cluster of 11 modular classroom buildings were observed near the center of the Project area. The 2005 aerial reveals that the primary 210-feet by 240-feet building on the property is has been demolished. In the 2009 aerial, a cluster of buildings replaced the primary 210-feet by 240-feet building and the modular classroom buildings observed near the center of the Project area are in the process of being removed. No drastic changes are observed on the 2010 to 2012 aerials. In the 2014 aerial, several of the buildings were removed from the Project area. No drastic changes are observed on the 2016 to 2020 aerials. A review of the historic aerials demonstrates that the Project area has been entirely disturbed by ground-disturbing activities related to the development of a reservoir, and the grading and development of a public elementary school. No historic structures are present within the Project area.

Historic topo maps of the Project area were reviewed (earliest map available is 1942). A creek feature is observed to the south of the Project area in the 1942, 1961, and 1964 topos and is no longer observed on the 1969 to 2018 topos. A reservoir feature covering a majority of the Project area is observed on the 1949 and 1960 topos. A school is observed in the 2015 topo but disappears on the 2018 topo. A review of the historic topo maps reveals that there are no historic-age structures within the Project area (NETR 2021b).

3.3 Geotechnical Study

GeoTek, Inc. completed a geotechnical study for the proposed Project area (completed January 19, 2022). The report, *Preliminary Geotechnical Evaluation Report, Proposed Pacific Elementary Re-Development, Assessor Parcel Numbers: 122-190-22-00, 122-190-19-00, 157070-42-00, Oceanside, California*, documents the subsurface geological conditions at the proposed Project area (GeoTek, Inc. 2022). The report details the Project background regarding previous geotechnical investigations, and the results of drilling 13 borings ranging between 5 and 46.5 feet below the existing ground surface.

Artificial fill was encountered to depths ranging between 2 to 25.5 feet below existing grade with the average depth across all borings ranging from 10 to 15 feet deep and located within the majority of the Project area. Alluvial soils (Quaternary Alluvium) were encountered in six borings to depths ranging between 11 to 46.5 feet below existing grades and located within the central sections of the Project area. Tertiary-age Santiago Formation (sedimentary bedrock) was encountered in eight borings at depths between 2 to 26.5 feet below existing grades and located in the northern and southern sections of the Project area. The site previously resided within an alluvial canyon and underlain by young to older alluvial deposits and bedrock of the Santiago Formation. The topography of the site has been graded as a building pad, as the site was developed and operated as an elementary school. An earthen dam was constructed to facilitate a water reservoir until the site was infilled to construct a flat earthen pad for construction of the elementary school (GeoTek, Inc. 2022).

3.4 NAHC and Tribal Correspondence

A search of the NAHC Sacred Lands File was requested on September 9, 2022 for the Project area and a 1-mile buffer. The SLF consists of a database of known Native American resources. These resources may not be included in SCIC database. The NAHC response was received on November 8, 2022 and results were negative (Appendix B). The NAHC additionally provided a list of Native American tribes and individuals/organizations with traditional geographic associations that might have knowledge of cultural resources in this area.

Outreach letters were mailed on November 28, 2022 to all Native American group representatives included on the NAHC contact list (Appendix B). These letters attempted to solicit additional information relating to Native American resources that may be impacted by the Project. Native American representatives were requested to define a general area where known resource intersect the Project area. The Rincon Band of Luiseño Indians responded on December 12, 2022, recommending the presence of a Rincon Tribal monitor during the pedestrian survey and a copy of the cultural resources study. The Viejas Band of Kumeyaay Indians responded on December 28, 2022 and requested a Kumeyaay Cultural monitor to be on site during ground disturbing activity and would like to be informed of any new developments such as inadvertent discovery of cultural artifacts, cremation sites, or human remains. The NAHC correspondence is included in Appendix B.

In compliance with Assembly Bill 52, the City, as lead agency, is responsible for conducting government to government consultation with tribal entities.

3.5 Intensive Pedestrian Survey

Dudek archaeologist Makayla Murillo conducted an intensive level pedestrian survey of the proposed Project area on September 21, 2022. Saving Sacred Sites Native American monitor Vii Sialoi participated in the pedestrian survey. All survey work was conducted employing standard archaeological procedures and techniques consistent with the Secretary of the Interior Standards. Fifteen-meter interval survey transects were conducted in a north-south direction for the Project area. Within the transects, the ground surface was examined for prehistoric artifacts (e.g., flaked stone tools, tool-making debris, stone milling tools, ceramics, fire-affected rock), soil discoloration that might indicate the presence of a cultural midden, soil depressions, features indicative of the current or former presence of structures or buildings (e.g., standing exterior walls, post holes, foundations), and historic artifacts (e.g., metal, glass, ceramics, building materials). Ground disturbances such as burrows, cut banks, and drainages were also visually inspected for exposed subsurface materials.

The entire Project area has been entirely disturbed, as evidenced by the presence of paved concrete and asphalt foundations, streetlights, children's sandbox, and a standing shade structure, and parking lot associated with the previous public elementary school (Figure 3). Approximately 65% of the Project area is paved with asphalt or concrete, while the rest of the Project area consists of vegetation including non-native grass, flat-topped buckwheat, and ice plants (Figure 4). A few non-native trees consisting of palm trees, eucalyptus, and peppertrees are present within the Project area.

In addition to the archaeological survey that was conducted, the Project area was also surveyed for potential built environment cultural resources. The survey confirmed that APN 157-070-42-00 was vacant and that APN 122-190-22-00 contains utilities, including a public sewer lift station, that were constructed circa 2016, and no other structures. The survey also confirmed that any historic age buildings have been demolished on APN 122-190-19-00 and the only extant structure on the property is a shade structure that was constructed circa 1998. Therefore, there are no built environment cultural resources within the Project area.

No cultural resources or built environment resources were identified within the Project area.

4 Summary and Management Considerations

4.1 Archaeological Recommendations

Dudek's cultural resources inventory of the Project indicates that there is a low sensitivity of identifying intact subsurface cultural resources deposits during Project implementation. The SCIC records search and pedestrian survey did not identify any cultural resources within the Project area. While there is a standing shade structure (circa 1998) within the Project area, it is less than 45 years of age; therefore, there is no potential for the Project to directly impact built environment cultural resources. Additionally, the Project area is in a ravine below most of the adjacent, historic-age, single-family residences, which creates a visual separation between the Project area and surrounding development, and it is unlikely that a development on the Project area would result in indirect impacts to the setting of built environment cultural resources.

The review of the historic aerials reveals that all native topsoils that would have had the potential to contain cultural deposits have been removed from the Project area. The Project area has been entirely disturbed by ground-

disturbing activities related to the development of a reservoir, earthen dam, and the grading and development of a public elementary school. The geotechnical report prepared for the Project indicates that artificial fill is located to depths ranging between 2 to 25.5 feet below existing grade (GeoTek, Inc. 2022). No prehistoric or historic age resources will be present within the fill sediment.

No further archaeological efforts or mitigation, including archaeological monitoring, are recommended to be necessary in support of implementation of the Project. The following recommendations are suggested in the unlikely event that cultural resources or human remains are encountered during construction activities.

Unanticipated Discovery of Archaeological Resources

In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities for the Project, all construction work occurring within 100 feet of the find shall immediately stop until a qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards can evaluate the significance of the find. Construction activities may continue in other areas, but should be redirected a safe distance from the find. If the new discovery is evaluated and found to be significant under CEQA and avoidance is not feasible, additional work such as data recovery may be warranted. In such an event, a data recovery plan should be developed by the qualified archaeologist in consultation with the City and Native American representatives, if applicable. Ground disturbing work can continue in the area of the find only after impacts to the resources have been mitigated and with City approval.

Unanticipated Discovery of Human Remains

In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the County Coroner shall be immediately notified of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the appropriate treatment and disposition of the human remains. If the County Coroner determines that the remains are, or are believed to be, Native American, he or she shall notify the NAHC in Sacramento within 24 hours. In accordance with California Public Resources Code Section 5097.98, the NAHC must immediately notify the person or persons it believes to be the MLD from the deceased Native American. The MLD shall complete inspection within 48 hours of being granted access to the site and make recommendations for the treatment and disposition, in consultation with the property owner, of the human remains.

Should you have any questions relating to this report and its findings, please do not hesitate to contact me at 619.949.3082 or kmontifolca@dudek.com.

Sincerely,

_____

Hello,

Thank you for your message. We're in receipt of your request. We have recently hired new staff, and
this change in our office is creating some delays. We estimate a turn-around time of 6-8 weeks and don't
anticipate responding sooner than the end of that time frame. Please let us know if you have any
questions.

Kind regards,

Native American Heritage Commission

Dear NAHC Staff,

I would like to request an SLF search for the Pacifica Elementary Housing Project (13823). The project
area is located in Oceanside, California.

A project description and record search map are attached. Please let me know if you need any other
information.

Thanks,
Makayla Murillo

Re: Pacifica Elementary Housing Development (13823) Project, San Diego County

Dear Ms. Murillo:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Pricilla.Torres-Fuentes@nahc.ca.gov.

Sincerely,

Pricilla Torres-Fuentes

Tribal Council ,
San Luis Rey Band of Mission Indians
1889 Sunset Dr.
Vista, CA 92081

Subject: Information Request for the Pacifica Elementary Housing Development Project, Oceanside, San Diego County, California

Dear Tribal Council,

The City of Oceanside is proposing construction for the Pacifica Elementary Housing Development Project (Project) which involves the demolition of the existing elementary school and development of 130-unit townhomes in the City of Oceanside, California (Figure 1). The Project comprises approximately 14.2 acres and is located at 4991 Macario Drive, Oceanside, California. This Project falls on Sections 4 and 33, Township 10 South, 11 South, Range 4 West of the Morro Hill, California U.S. Geological Survey (USGS) 7.5-minute Quadrangle.

As part of the cultural resources study prepared for the proposed Project, Dudek contacted the Native American Heritage Commission (NAHC) for a Sacred Lands file (SLF) search and a list of Native American individuals and/or tribal organizations who may have knowledge of cultural resources in or near the proposed Project area. The NAHC emailed a response on November 8, 2022, which stated that the SLF search did not identify the presence of Native American cultural resources in the immediate Project area. I am writing as part of the cultural inventory process in order find out if you, or your tribal community, have any knowledge of cultural resources or places that may be impacted by the proposed Project.

Please note that this letter does not constitute Assembly Bill (AB) 52 notification or initiation of consultation. Tribes that wish to be notified of projects for the purposes of consultation must contact the lead agency, City of Oceanside in writing (pursuant to Public Resources Code Section 21080.3.1 (b)).

If you have any information or concerns pertaining to such information, please contact me by phone or email.

Cultural Department,
San Luis Rey Band of Mission Indians
1889 Sunset Dr.
Vista, CA 92081

Subject: Information Request for the Pacifica Elementary Housing Development Project, Oceanside, San Diego County, California

Dear Cultural Department,

The City of Oceanside is proposing construction for the Pacifica Elementary Housing Development Project (Project) which involves the demolition of the existing elementary school and development of 130-unit townhomes in the City of Oceanside, California (Figure 1). The Project comprises approximately 14.2 acres and is located at 4991 Macario Drive, Oceanside, California. This Project falls on Sections 4 and 33, Township 10 South, 11 South, Range 4 West of the Morro Hill, California U.S. Geological Survey (USGS) 7.5-minute Quadrangle.

As part of the cultural resources study prepared for the proposed Project, Dudek contacted the Native American Heritage Commission (NAHC) for a Sacred Lands file (SLF) search and a list of Native American individuals and/or tribal organizations who may have knowledge of cultural resources in or near the proposed Project area. The NAHC emailed a response on November 8, 2022, which stated that the SLF search did not identify the presence of Native American cultural resources in the immediate Project area. I am writing as part of the cultural inventory process in order find out if you, or your tribal community, have any knowledge of cultural resources or places that may be impacted by the proposed Project.

Please note that this letter does not constitute Assembly Bill (AB) 52 notification or initiation of consultation. Mr. Mark Macarro, Chairperson
Pechanga Band of Mission Indians
P.O. Box 1477
Temecula, CA 92593

Subject: Information Request for the Pacifica Elementary Housing Development Project, Oceanside, San Diego County, California

Dear Mr. Macarro,

The City of Oceanside is proposing construction for the Pacifica Elementary Housing Development Project (Project) which involves the demolition of the existing elementary school and development of 130-unit townhomes in the City of Oceanside, California (Figure 1). The Project comprises approximately 14.2 acres and is located at 4991 Macario Drive, Oceanside, California. This Project falls on Sections 4 and 33, Township 10 South, 11 South, Range 4 West of the Morro Hill, California U.S. Geological Survey (USGS) 7.5-minute Quadrangle.

As part of the cultural resources study prepared for the proposed Project, Dudek contacted the Native American Heritage Commission (NAHC) for a Sacred Lands file (SLF) search and a list of Native American individuals and/or tribal organizations who may have knowledge of cultural resources in or near the proposed Project area. The NAHC emailed a response on November 8, 2022, which stated that the SLF search did not identify the presence of Native American cultural resources in the immediate Project area. I am writing as part of the cultural inventory process in order find out if you, or your tribal community, have any knowledge of cultural resources or places that may be impacted by the proposed Project.

Please note that this letter does not constitute Assembly Bill (AB) 52 notification or initiation of consultation. Tribes that wish to be notified of projects for the purposes of consultation must contact the lead agency, City of Oceanside in writing (pursuant to Public Resources Code Section 21080.3.1 (b)).

If you have any information or concerns pertaining to such information, please contact me by phone or email.

Respectfully,

Makayla Murillo, B.A.

The NAHC emailed a response on November 8, 2022, which stated that the SLF search did not identify the presence of Native American cultural resources in the immediate Project area. I am writing as part of the cultural inventory process in order find out if you, or your tribal community, have any knowledge of cultural resources or places that may be impacted by the proposed Project.

Please note that this letter does not constitute Assembly Bill (AB) 52 notification or initiation of consultation. Tribes that wish to be notified of projects for the purposes of consultation must contact the lead agency, City of Oceanside in writing (pursuant to Public Resources Code Section 21080.3.1 (b)).

If you have any information or concerns pertaining to such information, please contact me by phone or email.

Respectfully,

Makayla Murillo, B.A.

Subject: Information Request for the Pacifica Elementary Housing Development Project, Oceanside, San Diego County, California

Dear Mr. Rivera,

The City of Oceanside is proposing construction for the Pacifica Elementary Housing Development Project (Project) which involves the demolition of the existing elementary school and development of 130-unit townhomes in the City of Oceanside, California (Figure 1). The Project comprises approximately 14.2 acres and is located at 4991 Macario Drive, Oceanside, California. This Project falls on Sections 4 and 33, Township 10 South, 11 South, Range 4 West of the Morro Hill, California U.S. Geological Survey (USGS) 7.5-minute Quadrangle.

As part of the cultural resources study prepared for the proposed Project, Dudek contacted the Native American Heritage Commission (NAHC) for a Sacred Lands file (SLF) search and a list of Native American individuals and/or tribal organizations who may have knowledge of cultural resources in or near the proposed Project area. The NAHC emailed a response on November 8, 2022, which stated that the SLF search did not identify the presence of Native American cultural resources in the immediate Project area. I am writing as part of the cultural inventory process in order find out if you, or your tribal community, have any knowledge of cultural resources or places that may be impacted by the proposed Project.

Please note that this letter does not constitute Assembly Bill (AB) 52 notification or initiation of consultation. Tribes that wish to be notified of projects for the purposes of consultation must contact the lead agency, City of Oceanside in writing (pursuant to Public Resources Code Section 21080.3.1 (b)).

If you have any information or concerns pertaining to such information, please contact me by phone or email.

Makayla,

This email is written on behalf of the Rincon Band of Luiseño Indians ("Rincon Band" or "Tribe"), a federally recognized Indian tribe and sovereign government in response to your request for information pertaining to cultural and tribal cultural resources on the above referenced project. The identified location is within the Traditional Use Area of the Luiseño people and is also within the Tribe's specific area of Historic interest. As such, the Rincon Band is traditionally and culturally affiliated to the project area.

After review of the provided documents and our internal information, the Rincon Band believes potential exists that the project will impact Tribal Cultural Resources (TCRs) or Traditional Cultural Properties (TCPs). The proposed project is in a culturally-sensitive area and the Tribe believes that the potential exists for cultural resources to be identified during further research and survey work. We recommend a pedestrian survey in presence of a Rincon Tribal monitor. Additionally, please forward a final copy of the cultural resources study upon completion to the Rincon Band.

If you have additional questions or concerns, please do not hesitate to contact our office at your convenience at (760) 749 1092 ext. 323 or via electronic mail at cmadrigal@rincon-nsn.gov. Thank you for the opportunity to protect our cultural assets.

Sincerely,

Cheryl

If the reader of this message is not the intended recipient, or the employee or agent responsible for delivering the message to the intended recipient, you are hereby notified that any dissemination, distribution or copying of this message is strictly prohibited. If you have received this communication in error, please notify us immediately by replying to the sender of this E-Mail by return E-Mail or by telephone. In accordance with Internal Revenue Service Circular 230, we advise you that if this email contains any tax advice, such tax advice was not intended or written to be used, and it cannot be used, by any taxpayer for the purpose of avoiding penalties that may be imposed on the taxpayer.

The Viejas Band of Kumeyaay Indians ("Viejas") has reviewed the proposed project and at this time we have determined that the project site has cultural significance or ties to Viejas. Cultural resources have been located within or adjacent to the APE-DE of the proposed project.

Viejas Band request that a Kumeyaay Cultural Monitor be on site for ground disturbing activities and to inform us of any new developments such as inadvertent discovery of cultural artifacts, cremation sites, or human remains.

If you wish to utilize Viejas cultural monitors (Viejas rate is $54.15/hr. plus GSA mileage), please call Ernest Pingleton at 619-655-0410 or email, epingleton@viejas-nsn.gov, for contracting and scheduling. Thank you.

If a Tribe, having a closer proximity to the Project, requests to perform cultural monitoring, Viejas will differ to them.

Ray Teran
Viejas Tribal Government
Resource Management Director

Proposed Pacifica Elementary Re-Development
APN: 122-190-22-00, 122-190-19-00, and 157-070-42-00
Oceanside, California

Dear Ms. Crooker:

GeoTek, Inc. (GeoTek) is pleased to present the results of this preliminary geotechnical evaluation for the subject project located in the City of Oceanside, California. This report presents a discussion of GeoTek's field evaluation, analyses, and suitability of the site soils to support the proposed improvements. Based upon review, site development appears feasible from a geotechnical viewpoint provided that recommendations presented in this report are incorporated into the design and construction phases of the project.

We appreciate the opportunity to be of service on this project. Please contact the undersigned if you have any questions.

Respectfully submitted,
GeoTek, Inc.

1. PURPOSE AND SCOPE OF SERVICES

The purpose of this geotechnical evaluation is to provide recommendations for site development in consideration of the proposed site plans. Services provided included the following:

- Research and review of available geologic information pertinent to the property.
- Drilled, sampled, and logged thirteen (13) exploratory borings. Representative bulk samples and relatively undisturbed samples were obtained for laboratory testing. One cone penetration test (CPT) sounding was also performed.
- Drilled two (2) borings for percolation testing and infiltration analysis via the Porchet method.
- Geotechnical analyses and evaluation of site seismicity.
- Liquefaction and static settlement analyses.
- Preliminary recommendations for site development.

The intent of this report is to aid in the evaluation of the site for future development from a geotechnical engineering perspective. The professional opinions and geotechnical information contained in this report may need to be updated based on future review of final site development plans. These should be provided to GeoTek for review when available.

2. SITE DESCRIPTION AND PROPOSED DEVELOPMENT

2.1 SITE DESCRIPTION AND HISTORY

The subject site is located west of 4991 Macario Drive in the city of Oceanside, California (see Figure-1, Site Location Map). The site is an irregular shaped property approximately 14.2 acres and encompasses County of San Diego assessor parcel numbers (APN) 122-190-22-00, 122-190-19-00, and 157-070-42-00. The site is bounded by an approximate 30-foot-high ascending slopes and residential properties to the north and south; a sewer lift station, Macario Drive, and single-family dwellings to the east; and an approximate 25-foot descending slope followed by vacant land and Libby Lake to the west. Overall topography of the site has been graded as a building pad has

a gentle fall across the pad of about 3 to 5 feet to the west-southwest. Surface drainage is to the west-southwest, with some local variations.

The site previously was developed and operated as Pacifica elementary school. The eastern and central portions of the site were previously occupied by various buildings which have been demolished, however foundations still appear to be present. The property also contains paved areas, and existing landscape.

Review of site topographic maps indicates that the site previously resided within an alluvial canyon. An earthen dam was constructed within the site to facilitate a water reservoir until the site was infilled to construct a relatively flat earthen pad for the construction of Pacifica elementary school. The following is a general timeline of pertinent historic geotechnical events regarding the site.

1938: The site appeared to be in a natural state as a broad canyon drainage. Some agricultural fields can be seen to the south.
1946: A large reservoir retained by an earthen dam covered a majority of the site.
1953: The reservoir remains, however has reduced significantly in storage volume.
1964: The reservoir remains, however has reduced further in storage volume.
1967: The reservoir appears to have been drained and a braided alluvial fan can be observed.
1978: The graded pad is completed and the initial building has been constructed.
1980 to Present: the grades generally remain the same.

The site is located in an area geologically mapped by others to be underlain by young to older alluvial deposits and bedrock of the Santiago Formation (Kennedy, M.P. et. Al., 2007).

2.2 PROPOSED DEVELOPMENT

Based upon discussions with the design team, it is our understanding that the project will consist of the construction of twenty five, two-story, multi-family townhomes arranged as 3, 5, and 6-plexes. The structures are anticipated to be composed of wood-framed construction and utilize post-tensioned slabs. Planned development includes 130 residential units, 325 parking spaces, 6' front patios for each home unit, multiple open spaces for specific amenities such as tennis courts and tot lots, retaining walls, an EVA/Secondary access road, and interior street and utility improvements. Average cuts and fills averaging 3 to 4 feet are estimated to be required to reach design grades. The majority of taller cuts are localized and up to twelve feet tall. There are also localized taller fills for a proposed extension of Malaga Drive into the site as an emergency pathway.

3. FIELD EXPLORATION

3.1 FIELD EXPLORATION

Exploratory borings were advanced with a dual purposed, rubber-tire truck mounted CME-75 hollow-stem auger, equipped with optional CPT equipment, drill rig. On October 5, 2021, five (5) borings and one (1) CPT sounding were performed on the site. On November 4th, 2021 an additional eight (8) exploratory borings were performed. The explorations were advanced to depths ranging between 5 and 46.5 feet below the existing ground surface. The approximate locations of these explorations are shown on the Geotechnical Map, Figure 2a and Figure 2b. A geologist from GeoTek observed and logged the explorations, as well as obtained loose and relatively undisturbed samples that were transported to GeoTek's offices. Geotechnical logs of the explorations are included in Appendix A.

Standard penetration tests (SPT) were performed with a 2.0-inch outside diameter split-barrel sampler with a length of 18 inches. The inside diameter of the sampler shoe was 1.4 inches. The SPT sampler was unlined and conformed to the requirements of ASTM D 1586. The SPT sampler is machined to fit liners. The standard penetration test data are presented on the boring logs.

Relatively undisturbed soil samples were recovered at various depths/intervals in the geotechnical borings with a California sampler. The California sampler is a 3-inch outside diameter, 2.4-inch inside diameter, split barrel sampler lined with brass rings. The sampler was 18 inches long. The sampler conformed to the requirements of ASTM D 3550.

Additionally, large bulk samples were taken from the exploratory boring cuttings. Representative samples obtained during the field exploration, were returned to the laboratory for testing and evaluation.

The CPT sounding was advanced to a depth of approximately 67.5 feet below existing grades. The approximate locations of the explorations are shown on Figure 2a and Figure 2b. CPT soundings measure the tip and frictional resistance at near continuous intervals as an instrumented probe is advanced through the soil profile with a cone area ratio of 0.84.

3.2 PERCOLATION TESTING AND INFILTRATION ANALYSIS

Two percolation test borings and infiltration analyses were performed on site in two (2) locations (P-1 and P-2). The testing was conducted at an approximate boring depth of 60 inches at each location. The percolation test rate was converted to an infiltration rate via the Porchet method.

Results of our infiltration analyses are presented below. Copies of the infiltration conversion sheets and Table D.1-1 are included in Appendix B.

Boring	Depth (inches)	Infiltration Rate (inches per hour)*
P-1	60	0.24
P-2	60	0.06

* Rate was converted to an infiltration rate via the Porchet method

Factors of Safety have not been applied.

3.3 LABORATORY ANALYSES

Laboratory testing was performed on soil samples collected during the field exploration. The purpose of the laboratory testing was to evaluate the physical and chemical soil properties for use in engineering design and analysis. Results of the laboratory testing program, along with a brief description and relevant information regarding testing procedures, are included in Appendix C.

4. GEOLOGIC AND SOILS CONDITIONS

4.1 REGIONAL GEOLOGIC SETTING

The property is situated in the Peninsular Ranges geomorphic province. The Peninsular Ranges province is one of the largest geomorphic units in western North America. It extends approximately 975 miles from the north and northeasterly adjacent to the Transverse Range geomorphic province to the tip of Baja California. This province varies in width from about 30 to 100 miles. It is bounded on the north by the Transverse Ranges, west by the Pacific Ocean, on the south by the Gulf of California and on the east by the Colorado Desert Province.

4.2 GENERAL SOIL CONDITIONS

A brief description of the earth materials encountered during the subsurface explorations are presented in the following section. Based on review of the explorations, available geologic maps and technical literature and our site specific evaluation, the site is underlain by artificial fill, quaternary-age alluvium, and tertiary-age Santiago Formation sedimentary bedrock.

4.2.1 Artificial Fill (Af)

Artificial fill soils were encountered in each of GeoTek's test borings. These soils were found to consist of silty fine to coarse sands with occasional clayey sands (SM/SC soil type based upon the Unified Soil Classification System), ranging from yellow brown to dark brown in color with various other heterogeneous inclusions, dry to moist, and loose to medium dense. Artificial fill was encountered to depths ranging between 2 to 25.5 feet below existing grade with the average depth across all the borings being roughly 10 to 15 feet deep. A request for all geotechnically related documents regarding the site history was performed on be-half of GeoTek to the School District. The request did not return any information.

4.2.2 Quaternary Alluvium (Qal)

Alluvial soils were encountered in six (6) of GeoTek's test borings (B-1, B-3, B-6, B-7, B-12, and B-13) to depths ranging between 11 to 46.5 feet below existing grades with the average depth being roughly 13 to 21.5 feet deep. These soils consisted of various concentrations of silty sands, and clayey sands and were found to be various grey-blacks and browns in color, slightly moist to saturated, silty fine to coarse grained sands. The soil behavior type of the CPT sounding is interpreted to be variations of clays and silts. Moisture was noted to increase with depth and became saturated near a groundwater table located approximately 45 feet below existing grades in Boring B-1. Some of the alluvium contained roots that brought an organic odor with them.

4.2.3 Tertiary Santiago Formation (Tsa)

Tertiary-age Santiago Formation (sedimentary bedrock) was encountered in eight (8) of GeoTek's test borings (B-2, B-3, B-4, B-5, B-8, B-9, B-10, and B-11) Santiago Formation was encountered at depths between 2 to 26.5 feet below existing grades. The sedimentary bedrock has also been mapped to underlie the subject property on a regional geologic map reviewed for the area (Kennedy and Tan, 2007). The TSantiago Formation is regionally described to consist of medium to coarse grained, moderately well indurated, massive and broadly cross bedded sandstone. The sedimentary formation as encountered at the site was a yellow to light brown, fine to coarse sandstone with orange oxidation. The weathered bedrock varied in moisture (dry to very moist) depending on the boring location and was found to be dense to very dense.

4.3 SURFACE WATER AND GROUNDWATER

4.3.1 Surface Water

Surface water was not observed during the recent exploration. If encountered during earthwork operations, surface water on this site is the likely result of precipitation, irrigation, or possibly some minor surface run-off from immediately surrounding properties. Overall, the site drainage is directed toward the west to southwest with localized variations.

4.3.2 Groundwater

Groundwater was encountered in one of GeoTek's explorations, B-1, at a depth of 45 feet below existing grades. Due to the absence of groundwater in the rest of the borings and the apparent depth of the encountered groundwater, groundwater is not anticipated to be a factor in the proposed construction.

4.4 FAULTING AND SEISMICITY

The geologic structure of the entire southern California area is dominated mainly by northwest-southeast oriented fault blocks. Several major fault zones are found in this province. The site is in a seismically active region. The Elsinore Fault zone and the San Jacinto Fault zone trend northwest-southeast and are found near the middle of the province. The San Andreas Fault zone borders the northeasterly margin of the province. No active or potentially active fault is known to exist at this site nor is the site situated within an *"Alquist-Priolo"* Earthquake Fault Zone or a Special Studies Zone (Bryant and Hart, 2007; CGS, 1980). The nearest known active fault to the project site is the Rose Canyon-Newport-Inglewood fault (offshore), which is located approximately 9 miles to the southwest of the property. A potential earthquake with a magnitude (MCE) of up to 6.9 may result from this fault. These faults identified on geologic maps are readily available and reviewed by this firm for the immediate study area.

4.4.1 Seismic Design Parameters

The site is located at approximately 33.2562 Latitude and -117.3040 Longitude. Site spectral accelerations (Ss and S1), for 0.2 and 1.0 second periods for a risk targeted two (2) percent probability of exceedance in 50 years (MCER) were determined using the web interface provided by SEAOC/OSHPD (https://seismicmaps.org) to access the USGS Seismic Design Parameters. Using the ASCE 7-16 option on the SEAOC/OSHPD website results in the values for SM1 and SD1 reported as "null-See Section 11.4.8" (of ASCE 7-16). As noted in ASCE 7-16, Section 11.4.8, a site-specific ground motion procedure is recommended for Site Class D when the value S1 exceeds 0.2. The value S1 for the subject site exceeds 0.2.

For a site Class D, an exception to performing a site-specific ground motion analysis is allowed in ASCE 7-16 where S1 exceeds 0.2 provided the value of the seismic response coefficient, Cs, is conservatively calculated by Eq 12.8-2 of ASCE 7-16 for values of T≤1.5Ts and taken as equal to 1.5 times the value computed in accordance with either Eq. 12.8-3 for TL≥T>1.5Ts or Eq. 12.8-4 for T>TL. Based on the explorations performed at this site, the reviewed geologic map, and planned grading activities, the site structural improvements will be underlain by engineered fill, alluvium, and bedrock. For these soil conditions, a Site Class D is considered appropriate.

Assuming that the Cs value calculated by and used by the structural engineer allows for the exclusion per ASCE 7-16, noted above, then a site-specific ground motion analysis is not required. For this assumption and condition, the following seismic design parameters, based on the 2015 National Earthquake Hazards Reduction Program (NEHRP), are presented on the following table:

SITE SEISMIC PARAMETERS	
Mapped 0.2 sec Period Spectral Acceleration, Ss	0.923g
Mapped 1.0 sec Period Spectral Acceleration, S1	0.342g
Site Coefficient for Site Class "D," Fa	1.131
Site Coefficient for Site Class "D," Fv	1.958
Maximum Considered Earthquake Spectral Response Acceleration for 0.2 Second, SMS	1.044g
Maximum Considered Earthquake Spectral Response Acceleration for 1.0 Second, SM1	0.67g
5% Damped Design Spectral Response Acceleration Parameter at 0.2 Second, SDS	0.696g
5% Damped Design Spectral Response Acceleration Parameter at 1 second, SD1	0.446g
PGA_M	0.479g
Seismic Design Category	D

Final selection of the appropriate seismic design coefficients should be made by the project structural engineer based upon the local practices and ordinances, expected building response and desired level of conservatism. Should it be determined that the exclusion as outlined in ASCE 7-16 is not appropriate for this site, then a site-specific ground motion analysis will be necessary.

4.4.2 Liquefaction/Seismic Settlement

Liquefaction describes a phenomenon in which cyclic stresses, produced by earthquake-induced ground motion, create excess pore pressures in relatively cohesionless soils. These soils may thereby acquire a high degree of mobility, which can lead to lateral movement, sliding, settlement of loose sediments, sand boils and other damaging deformations. This phenomenon occurs only below the water table, but, after liquefaction has developed, the effects can propagate upward into overlying non-saturated soil as excess pore water dissipates.

Utilizing the results of the CPT-1 sounding, GeoTek evaluated the liquefaction potential of the on-site soils using the computer program *Cliq Version 3.3.1.14*. For this analysis, the computer software program utilized an estimated high-water depth of 40 feet, a ground acceleration of 0.48g (PGA_M) and a mean earthquake event of 6.57. The ground acceleration and earthquake magnitude were obtained from the USGS websites. The results of this analysis indicated that the soils below the estimated high-water depth of 40 feet are not potentially susceptible to liquefaction during a seismic event. The following table summarizes the amount of total settlement (liquefaction settlement plus settlement of dry sands) estimated at the referenced location:

ESTIMATED SEISMICALLY INDUCED TOTAL SETTLEMENT	
CPT Sounding	Total Settlement (inches)
CPT-1	0.00

*Sounding terminated at about 67.5 feet

As noted above, no seismically induced settlement is estimated for the subject property. The results of the liquefaction and seismic settlement analyses are presented within Appendix E.

4.5 STATIC SETTLEMENT ANALYSES

Static settlement of the alluvial soils below proposed improvements may occur as a result of the loads imposed by changes in pad grade and building loads. Due to the relatively high moisture content of the soil and fine-grained consistency, hydro consolidation due to the introduction of water into the fills and alluvial deposits is not considered likely.

Settlement estimates were calculated using the CPT data and the computer program CPeT-IT version 3.0.2.1 by Geologismiki. More specifically, CPT data was used to calculate the constrained modulus for each depth increment in the tested soil column. Constrained modulus is then used in combination with the anticipated stress increase due to planned improvements to quantify a settlement quantity for each depth increment. Settlements are summed over the entire data range to provide an estimated settlement at the existing surface. For CPT-1, the calculation was conducted assuming a large post-tensioned foundation with an embedment of 1 foot into existing soils (modeled as a 0.75 tsf foundation load), consistent with the proposed improvements. The results are tabulated below and are presented in Appendix D:

CPT NUMBER	POTENTIAL STATIC SETTLEMENT (in.)
CPT-1	≈ 1

Based on the above estimates, static total settlement for the proposed structures should be considered to be one inch with a differential settlement of one-half inch over 40 feet. The actual magnitude of settlement is dependent upon actual subsurface conditions, planned grade changes, foundation loads, and may vary from that anticipated.

4.6 GLOBAL SLOPE STABILITY ANALYSES

Direct shear test results, experience, and judgement were used in selecting shear strengths. GeoTek performed laboratory direct shear testing on one remolded soil sample collected during our field exploration. The result of the test is presented in Appendix B. The existing ascending fill slopes were observed to be consistent with the fill soils observed during test borings and

laboratory testing. In addition, the ascending slopes exposing Santiago formation was observed to be visually consistent and in some areas exposed silty medium to coarse grained sandstones with occasional small rounded gravels. Remolded shear strength testing results of bedrock materials have lower strength than undisturbed parent material that does not exhibit adverse geologic structure or joint/fractures. Therefore, utilizing the remolded shear strength of the fill, is considered a conservative approach. Observation of the slopes exposing Santiago formation was performed by a certified engineering geologist and found to be absent of geologic structure. As such, evaluating the Santiago Formation as isotropic is considered in our analyses.

Three slope stability sections were performed to analyze the existing and proposed improvements. The sections were selected to represent three different geotechnical conditions:

- Section AA: Represents the existing fill slope, located in the western end of the site.
- Section BB: Represents the offsite ascending fill slope along the north of the site retained by a proposed ten foot tall wall.
- Section CC: Represents the offsite ascending fill slope along the north of the site retained by a proposed ten foot tall wall.

In general, the results of the stability analyses indicated factors of safety for a static condition to be 1.5 or greater and for a pseudo-static condition to be 1.1 or greater. Sections BB and CC were performed to be preliminary proofs of concept for the design of retaining walls. Where a factor of safety of less than acceptable resulted (1.5 for static and 1.1 for psuedo-static), a wedge of high strength backfill was applied to the active zone behind the retaining wall. A summary of slope stability is presented in Appendix E. After retaining wall designs have been prepared, our office should be contacted to re-evaluate the global slope stability.

5. CONCLUSIONS AND RECOMMENDATIONS

5.1 GENERAL

Considering the history of the site, borings were planned to advance in the anticipated location of the earthen reservoir damn, behind the damn, fill placed for the building pad, and in the alluvial soils. These areas were explored with the intent of evaluating their consistency.

The location of a remnant earthen reservoir could not be identified based on our geotechnical borings. It is our opinion that the earthen dam was constructed with effort, based on the purpose

of the design. If the earthen dam remains in place, further evaluation during remedial grading will determine the need for additional recommendations.

Our exploration program also was performed to provide coverage across the site to evaluate the existing fills and alluvial soils. Consolidation data and moisture density data was obtained throughout the fills. The moisture-density data of the fill was compared to the alluvial data. Based on the blow count data obtained during drilling, the consistency of the fills deeper than 10 feet was relatively consistent with the alluvial soils. Considering the alluvial soils have been surcharged with eleven to twenty feet of fills over a period of 46 to 53 years, the primary settlement has been considered to be complete with negligible secondary settlements anticipated to remain. This also serves as a basis for concluding that the building pad fills deeper than ten feet are generally consistent with the alluvial soils based on blow counts.

The anticipated site development appears feasible from a geotechnical viewpoint provided that the following recommendations, and any subsequent recommendations provided by this firm at a later date, are incorporated into the design and construction phases of development.

5.2 EARTHWORK CONSIDERATIONS

5.2.1 General

Earthwork and grading should be performed in accordance with the applicable grading ordinances of the City of Oceanside, the 2019 California Building Code (CBC), and recommendations contained in this report. The Grading Guidelines included in Appendix F outline general procedures and do not anticipate all site-specific situations. In the event of conflict, the recommendations presented in the text of this report supersede those contained in Appendix F.

5.2.2 Site Clearing and Preparation

In areas of planned grading and improvements, the site should be cleared of existing structures and foundations, vegetation and other deleterious materials and properly disposed off-site. Concrete may be incorporated into fills provided the concrete is processed to remove the reinforcement bar (if present) and incorporated as general fill provided placement of oversized material is in accordance to the general guidelines presented in Appendix F. The concrete should be placed in designated areas, preferably outside building pads. Similarly, existing asphalt and aggregate base may be incorporated into the subbase of proposed interior streets, provided the asphalt is processed into ¾-inch maximum aggregate. Voids resulting from site clearing should be replaced with engineered fill after remedial removals/over-excavations have occurred. Existing underground improvements and utilities not to remain is service should also be removed as part of site development operations. It should be noted that an existing 8 inch vitrified clay pipe (VCP) and 24 inch storm drain underground utility underlies the site. If the utility extends offsite, the

utility should be sealed water tight. Alternatively, the utility may be infilled with a low controlled strength material, such as sand-cement slurry consisting of two 94lb bags of cement for each yard of sand slurry.

5.2.3 Remedial Grading (Removals)

Based on the consolidation and moisture-density test results in the upper 10 feet, it is recommended that the upper 10 feet of existing fills should be removed below all areas to receive improvements and engineered fill. The depth of removals should be below existing grades or rough grades, whichever is deeper. Where sedimentary bedrock is encountered, the removal may be reduced to meet overexcavation recommendations. Removal bottoms exposing fills tested to at least 90% relative to ASTM D1557 test procedures is an acceptable bottom to receive engineered fills.

5.2.4 Horizontal Extent of Removals

The horizontal limits of removals should extend to the property line or ascending slope. Where existing fills daylight into ascending slopes, a temporary slope may be projected into the site at a maximum inclination of 1:1 (horizontal:vertical). Where removals are performed for proposed retaining walls supporting existing ascending slopes, the extent of the lateral removal can be terminated at the proposed wall foundation, provided the wall foundation is bearing into competent Santiago Formation or fills.

5.2.5 Preparation of Excavation Bottoms

A representative of this firm should observe the bottom of all excavations. Upon approval, the exposed soils and all soils in areas to receive engineered fill should be scarified to a depth of approximately eight (8) inches, moistened to at least the optimum moisture content and compacted to a minimum relative compaction of 90 percent (ASTM D 1557).

5.2.6 Engineered Fill

The on-site soils are generally considered suitable for reuse as engineered fill provided they are free from vegetation, debris, other deleterious material, and rock no larger than six inches. Engineered fill should be placed in loose lifts with a thickness of eight (8) inches or less, moisture conditioned to at least two percent above the optimum moisture content and compacted to a minimum relative compaction of 90 percent (ASTM D-1557).

5.2.7 Cut/Fill Building Pad Overexcavation

Site grading may result in portions of a building pad exposing Santiago Formation and engineered fills across the building pad. This condition creates a cut/fill transition. Whenever a cut/fill transition occurs, the cut portion of the pad should be over-excavated a minimum of three feet and replaced with engineered fill.

In pavement areas, removals should extend at least two feet below finish grade, or one foot below finished subgrade, whichever is lower.

5.2.8 Excavation Characteristics

Excavations in the fills and Santiago Formation should be accomplished with medium to heavy-duty earthmoving or excavating equipment in good operating condition.

5.2.9 Shrinkage and Bulking

Several factors will impact earthwork balancing on the site, including artificial fills to be remedially graded and bedrock bulking, trench spoils from utilities and footing excavations, as well as the accuracy of topography.

Shrinkage and bulking are largely dependent upon the degree of compactive effort achieved during construction relative to the pre-construction relative compaction. For planning purposes, a shrinkage factor ranging from 0 to 7 percent may be considered for undocumented fill materials requiring removal and re-compaction. A shrinkage factor of 5 percent may be considered for fill materials requiring removal and re-compaction. For bedrock material, a bulking factor should consider 10 percent.

5.3 DESIGN RECOMMENDATIONS

5.3.1 Stormwater Infiltration

Many factors control infiltration of surface waters into the subsurface, such as consistency of native soils and bedrock, geologic structure, fill consistency, material density differences, and existing groundwater conditions. Due to the location of the proposed stormwater BMP basin in close proximity to existing descending slope, collection of surface waters in this area should be designed with as a filtration basin constructed with an impermeable liner along the sidewalls and bottom.

5.3.2 Foundation Recommendations

Foundation design criteria for a post-tensioned foundation system, in general conformance with the 2019 CBC, are presented below. Following site grading, the site soils are anticipated as having a "low" ($21 \leq EI \leq 50$) to "medium" ($51 \leq EI \leq 90$) expansion potential in accordance with ASTM D 4829. These are minimal recommendations and are not intended to supersede the design by the project structural engineer.

The post-tensioned slabs for the proposed structures should bear entirely in engineered fill soils.

Presented below are post-tension foundation design parameters for the proposed residential structures derived in general conformance with *Design of Post-Tension Slabs-on-Ground, Third Edition* (PTI, 2004) and *Addendum No. 1 to the 3rd Edition of the Design of Post-Tension Slabs-on-Ground* (PTI, 2007). Post-tensioned slabs should be designed in accordance with the 2019 CBC and PTI design methodology.

DESIGN PARAMETERS FOR POST-TENSIONED SLABS		
Foundation Design Parameter	Design Value	
	"Low" Expansive Soils 21≤EI≤50	"Medium" Expansive Soils 51≤EI≤90
Edge Moisture Variation Distance, e_m - Edge Lift (swelling) - Center Lift (shrinkage)	 5.2 ft 9.0 ft	 5.1 ft 9.0 ft
Soil Differential Movement, y_m - Edge Lift (swelling) - Center Lift (shrinkage)	 ≈0.45 in ≈0.20 in	 ≈0.51 in ≈0.22 in
Ext. Perimeter Beam Embedment	12 inches*	18 inches*
Presaturation of Subgrade Soil (Percent of Optimum)	Minimum 110% to a depth of 12 inches	Minimum 120% to a depth of 12 inches

* Required depth of perimeter beam/stiffening rib per structural calculations may govern.
The following assumptions were used to generate e_m and y_m values: Thornthwaite Moisture Index = -20; constant suction value = 3.9pF; post-equilibrium case assumed with wet (swelling) cycle going from 3.9pF to 3.0pF and drying (shrinking) cycle going from 3.9pF to 4.5pF.

We recommend that an allowable soil bearing pressure of 1,500 psf for the design of the post-tensioned systems. This recommended allowable soil bearing pressure maybe increased by one-third for temporary seismic or wind loading.

Based on experience in the area, structural foundations may be designed in accordance with the 2019 CBC to withstand a total settlement of about 1 inch and maximum differential settlement of one-half of the total settlement over a horizontal distance of 40 feet.

The passive earth pressure may be computed as an equivalent fluid having a density of 250 psf per foot of depth, to a maximum earth pressure of 2,500 psf for footings founded on engineered fill. A coefficient of friction between soil and concrete of 0.35 may be used with dead load forces. passive pressure and frictional resistance can be combined without reduction.

A grade beam, should be utilized across large entrances. The base of the grade beam should be at the same elevation as the bottom of the adjoining footings.

5.3.3 Foundation Setbacks

Minimum setbacks for all foundations should comply with the 2019 CBC or City of Oceanside requirements, whichever is more stringent. Improvements not conforming to these setbacks are subject to the increased likelihood of excessive lateral movement and/or differential settlement. If large enough, these movements can compromise the integrity of the improvements.

- The outside bottom edge of all footings should be set back a minimum of H/3 (where H is the slope height) from the face of any descending slope. The setback should be at least seven feet and need not exceed 40 feet.

- The bottom of any proposed foundations should be deepened so as to extend below a 1:1 upward projection from the bottom edge of the nearest excavation and the bottom edge of the closest footing.

5.3.4 Miscellaneous Foundation Recommendations

To minimize moisture penetration beneath the slab-on-grade areas, utility trenches should be backfilled with engineered fill, lean concrete or concrete slurry where they intercept the perimeter footing or thickened slab edge.

Soils from the footing excavations should not be placed in the slab-on-grade areas unless properly compacted and tested. The excavations should be free of loose/sloughed materials and be neatly trimmed at the time of concrete placement.

5.3.5 Moisture and Vapor Retarding System

A moisture and vapor retarding system should be placed below slabs-on-grade where moisture migration through the slab is undesirable. As a minimum, the capillary break and moisture retarder should be in conformance with the 2019 CBC Section 1910.1 or, if adopted by the local agency, the current California Green Building Standards Code (CALGreen) Section 4.505.2.

It should be realized that the effectiveness of the vapor retarding membrane can be adversely impacted as the result of construction related punctures (e.g. stake penetrations, tears, punctures from walking on the aggregate layer, etc.). These occurrences should be limited as much as possible during construction. Thicker membranes are generally more puncture resistant than thinner ones. Products specifically designed for use as moisture/vapor retarders may also be more puncture resistant. It is GeoTek's opinion that a minimum 10 mil thick membrane with

joints properly overlapped and sealed should be used. Although, thinner specifically design retarder may be acceptable.

Moisture and vapor retarding systems constructed in compliance with Code minimums provide a certain level of resistance to vapor and moisture transmission through the concrete, but do not eliminate it. The acceptable level of moisture transmission through the slab is to a large extent based on the type of flooring used. Ultimately, the vapor retarding system should be comprised of suitable elements to limit migration of water and reduce transmission of water vapor through the slab to acceptable levels. The selected elements should have suitable properties (i.e. thickness, composition, strength, and permeance) to achieve the desired performance level. Consideration should be given to consulting with an individual possessing specific expertise in this area for additional evaluation. Moisture and vapor retarding systems are intended to provide a certain level of resistance to vapor and moisture transmission through the concrete, but do not eliminate it. The acceptable level of moisture transmission through the slab is to a large extent based on the type of flooring used and environmental conditions. Ultimately, the vapor retarding system should be comprised of suitable elements to limited migration of water and reduce transmission of water vapor through the slab to acceptable levels. The selected elements should have suitable properties (i.e. thickness, composition, strength, and permeability) to achieve the desired performance level.

Moisture retarders can reduce, but not eliminate, moisture vapor rise from the underlying soils up through the slab. Moisture retarder systems should be designed and constructed in accordance with applicable American Concrete Institute, Portland Cement Association, Post-Tensioning Concrete Institute, ASTM and California Building Code requirements and guidelines.

GeoTek recommends that a qualified person, such as the flooring contractor, structural engineer, architect, and/or other experts specializing in moisture control within the building be consulted to evaluate the general and specific moisture and vapor transmission paths and associated potential impact on the proposed construction. That person (or persons) should provide recommendations relative to the slab moisture and vapor retarder systems and for migration of potential adverse impact of moisture vapor transmission on various components of the structures, as deemed appropriate.

In addition, the recommendations in this report and GeoTek's services in general are not intended to address mold prevention; since GeoTek, along with geotechnical consultants in general, do not practice in the area of mold prevention. If specific recommendations addressing potential mold issues are desired, then a professional mold prevention consultant should be contacted.

5.3.6 Soil Corrosivity and Sulfate Content

A full corrosion series was performed by GeoTek's subconsultant Project X Corrosion Engineering on two representative soil samples obtained from the borings. The results indicate a soil water-soluble sulfate content of less than 0.1 percent by weight, which is considered "negligible" per Table 4.2.1 of ACI 318. Based on the test results and ACI 318, no special recommendations for concrete on this project are required for this project due to soil sulfate exposure. Also, the results of saturated resistivity tests suggest that the on-site materials are "highly corrosive" to buried metals (Roberge, P.R., 2005). The laboratory results are presented in Appendix C.

5.4 RETAINING WALL DESIGN AND CONSTRUCTION

5.4.1 General Design Criteria

Recommendations presented herein may apply to typical masonry or concrete vertical retaining walls to a maximum height of up to 15 feet. Additional review and recommendations should be requested for higher walls.

Retaining wall foundations at least 12 inches wide embedded a minimum of 18 inches into engineered fill deposits should be designed using an allowable bearing capacity of 2,500 psf. This value may be increased by 300 pounds per square foot for each additional 12 inches in depth and 100 pounds per square foot for each additional 12 inches in width to a maximum value of 4,500 psf. Additionally, an increase of one-third may be applied when considering short-term live loads (e.g., seismic and wind loads).

The passive earth pressure may be computed as an equivalent fluid having a density of 250 psf per foot of depth, to a maximum earth pressure of 2,500 psf for footings founded on engineered fill. A coefficient of friction between soil and concrete of 0.35 may be used with dead load forces. Passive pressure and frictional resistance can be combined without reduction.

Retaining walls, including basement walls, should consider the use of a waterproofing to reduce moisture transmission through the wall facing elements and resulting efflorescence.

5.4.2 Cantilevered Walls

The recommendations presented below are for cantilevered retaining walls up to 15 feet high. Active earth pressure may be used for retaining wall design, provided the top of the wall is not restrained from minor deflections. An equivalent fluid pressure approach may be used to compute the horizontal pressure against the wall. Appropriate fluid unit weights are given below for specific slope gradients of the retained material. These do not include other superimposed loading conditions such as traffic, structures, seismic events, or adverse geologic conditions.

ACTIVE EARTH PRESSURES		
Surface Slope of Retained Materials (h:v)	Equivalent Fluid Pressure(pcf) Native Soils*	Equivalent Fluid Pressure(pcf) Imported Granular Materials**
Level	45	37
2:1	75	53

* The design pressures assume the native backfill material has an expansion index less than or equal to 50 and a friction angle of at least 29 degrees. Backfill zone includes area between the back of the wall and footing to a plane (1:1 h:v) up from the bottom of the wall foundation to the ground surface.

**The design pressures assume the imported granular backfill material has an expansion index less than or equal to 20 and a friction angle of at least 34 degrees. Backfill zone includes area between the back of the wall and footing to a plane (1:1 h:v) up from the bottom of the wall foundation to the ground surface.

It should be noted that the 2019 CBC requires the inclusion of an additional earthquake-induced lateral force to be considered on retaining walls retaining more than 6 feet of soil. An incremental seismic (dynamic) lateral earth pressure of 15 pcf is recommended for cantilever (unrestrained) walls with level backfill. The point of application of the dynamic load increment is at 1/3H, where H is the retained height. Additional surcharge loads from adjacent structures, pavements, retaining walls, etc. should be incorporated by the structural engineer into the retaining wall design as necessary.

5.4.3 Retaining Wall Backfill and Drainage

Retaining and/or basement wall backfill should have the properties indicated in Section 5.4.2 and should be free of deleterious and/or oversized materials. The wall backfill should also include a minimum one-foot wide section of ¾- to 1-inch clean crushed rock (or approved equivalent). The rock should be placed immediately adjacent to the back of wall and extend up from the back drain to within approximately 12 inches of finish grade. The upper 12 inches should consist of compacted onsite materials. Presence of other materials might necessitate revision to the parameters provided and modification of wall designs. The backfill materials should be placed in lifts no greater than 8-inches in thickness and compacted to a minimum of 90 percent of the soil's maximum dry density as determined by ASTM D 1557 test procedures. Proper surface drainage needs to be provided and maintained. Bracing of the walls during backfilling and compaction may also be necessary.

All earth retention structures should be provided with an adequate pipe and gravel back drain system to reduce the potential for hydrostatic pressure build up. As a minimum, backdrains should consist of a four-inch diameter perforated collector pipe (Schedule 40, SDR 35, or approved equivalent) embedded in a minimum of one cubic foot per lineal foot of ¾- to 1-inch

clean crushed rock or equivalent, wrapped in filter fabric (Mirafi 140N or approved equivalent). The drain system should be connected to a suitable outlet, as determined by the civil engineer. Drain outlets should be maintained over the life of the project and should not be obstructed or plugged by adjacent improvements. Waterproofing of site walls should be performed where moisture migration through the wall is undesirable.

As an alternative to the drain, rock and fabric, a pre-manufactured wall drainage product (example: Mira Drain 6000 or approved equivalent) may be used behind the retaining wall. The wall drainage product should extend from the base of the wall to within two (2) feet of the ground surface. The subdrain should be placed in direct contact with the wall drainage product.

Proper surface drainage needs to be provided and maintained. Water should not be allowed to pond behind retaining walls. Waterproofing of site walls should be performed where moisture migration through the wall is undesirable.

5.4.4 Restrained Retaining Walls

Any retaining walls that will be restrained (e.g. basement walls) prior to placing and compacting backfill material or that have reentrant or male corners, should be designed for an at-rest equivalent fluid pressure of 65 pcf for level native backfill, plus any applicable surcharge loading. For imported granular backfill, an equivalent fluid pressure of 57 pcf should be utilized. For areas of male or reentrant corners, the restrained wall design should extend a minimum distance of twice the height of the wall laterally from the corner.

5.4.5 Soil Nail Walls

Soil nail walls may be desired in select areas. One of the primary design constraints with soil nail walls is the availability of property to embed soil nails behind the wall face. In general, it appears soil nail walls may be considered as an option. Our office should be contact if soil nail walls are preferred and soil design parameters are needed.

5.4.6 Mechanically Stabilized Earthen (MSE) Walls

Mechanically stabilized earthen walls may be considered to be a design option in proposed areas where walls are being considered to retain new fill slopes. Based on laboratory analyses, the existing site soils appear to be favorable for MSE wall design. However, selective grading during construction and verified by additional laboratory conformation testing or additional sampling and testing prior to construction is recommended. Preliminarily, the following MSE design parameters may be considered.

Preliminary MSE Wall Design Parameters				
Purpose	Material	Unit Weight	Angle of Internal Friction (degrees)	Apparent Cohesion (psf)
MSE Walls	Select Fill	125	29	0

5.5 PRELIMINARY PAVEMENT DESIGN AND CONSTRUCTION

5.5.1 Asphalt Concrete Pavement Design

Based on laboratory testing, preliminary pavement sections have been designed using a R-value of 25. Traffic Indices (TIs) of 5.0 and 6.0 were utilized, and depending on final guidance from a traffic engineer, may require revision of the following recommendations:
Traffic Index of 5.0:

3-inches asphalt concrete (AC) over
7-inches of aggregate base (AB) over
12-inches of subgrade compacted to 95% of maximum dry density

Traffic Index of 6.0:

4-inches asphalt-concrete (AC) over
8-inches of aggregate base (AB) over
12-inches of subgrade compacted to 95% of maximum dry density

The provided pavement sections are intended as a minimum guideline and final selection of pavement cross section parameters should be made by the project civil engineer, based upon the local laws and ordinates, expected subgrade and pavement response, and desired level of conservatism. If thinner or highly variable pavement sections are constructed, increased maintenance and repair could be expected. Irrigation adjacent to pavements, without a deep curb or other cutoff to separate landscaping from the paving may result in premature pavement failure. Final pavement design should be checked by testing of soils exposed at subgrade (the upper 12 inches) after final grading has been completed.

Asphalt concrete and aggregate base should conform to current Caltrans Standard Specifications Section 39 and 26-1.02, respectively. As an alternative, asphalt concrete can conform to Section 203-6 of the current Standard Specifications for Public Work (Green Book). Crushed aggregate base or crushed miscellaneous base can conform to Section 200-2.2 and 200-2.4 of the Green

Book, respectively. Pavement base should be compacted to at least 95 percent of the ASTM D 1557 laboratory maximum dry density (modified proctor).

All pavement installation, including preparation and compaction of subgrade, compaction of base material, placement and rolling of asphaltic concrete, should be done in accordance with the City of Oceanside specifications, and under the observation and testing of GeoTek and a City inspector, if necessary. Jurisdictional minimum compaction requirements in excess of the aforementioned minimums may govern.

5.6 CONCRETE FLATWORK

5.6.1 Exterior Concrete Slabs, Sidewalks and Driveways

Exterior concrete slabs, sidewalks and driveways should be designed using a four-inch minimum thickness. Some shrinkage and cracking of the concrete should be anticipated as a result of typical mix designs and curing practices typically utilized in construction.

Sidewalks and driveways may be under the jurisdiction of the governing agency. If so, jurisdictional design and construction criteria would apply, if more restrictive than the recommendations presented in this report.

Subgrade soils should be pre-moistened prior to placing concrete. The subgrade soils below exterior slabs, sidewalks, driveways, etc. should be pre-saturated to a minimum of 110 percent (for "low" expansivity) of the optimum moisture content to a depth of 12 inches.

All concrete installation, including preparation and compaction of subgrade, should be done in accordance with the City of Oceanside specifications, and under the observation and testing of GeoTek, Inc. and a City inspector, if necessary.

5.6.2 Concrete Performance

Concrete cracks should be expected. These cracks can vary from sizes that are "hairline" to more than 1/8 inch in width. Most cracks in concrete, while unsightly, do not significantly impact long-term performance. While it is possible to take measures (proper concrete mix, placement, curing, control joints, etc.) to reduce the extent and size of cracks that occur, some cracking will occur despite the best efforts to minimize it. Concrete undergoes chemical processes that are dependent on a wide range of variables, which are difficult, at best, to control. Concrete, while seemingly a stable material, is subject to internal expansion and contraction due to external changes over time.

One of the simplest means to control cracking is to provide weakened control joints for cracking to occur along. These do not prevent cracks from developing; they simply provide a relief point for the stresses that develop. These joints are a widely accepted means to control cracks but are not always effective. Control joints are more effective the more closely spaced they are. GeoTek, Inc. suggests that control joints be placed in two directions and located a distance apart approximately equal to 24 to 36 times the slab thickness.

6. POST CONSTRUCTION CONSIDERATIONS

6.1 LANDSCAPE MAINTENANCE AND PLANTING

Water has been shown to weaken the inherent strength of soil, and slope stability is significantly reduced by overly wet conditions. Soils should be maintained in solid to semi-solid state as indicated by the material's Atterberg limits. Positive surface drainage away from graded slopes should be maintained and only the amount of irrigation necessary to sustain plant life should be provided for planted slopes. Controlling surface drainage and runoff and maintaining a suitable vegetation cover can minimize erosion. Plants selected for landscaping should be lightweight, deep-rooted types that require little water and are capable of surviving the prevailing climate.

Overwatering should be avoided. An abatement program to control ground-burrowing rodents should be implemented and maintained. Burrowing rodents can decrease the long-term performance of slopes.

It is common for planting to be placed adjacent to structures in planter or lawn areas. This will result in the introduction of water into the ground adjacent to the foundations. This type of landscaping should be avoided.

6.2 DRAINAGE

Positive site drainage should be maintained at all times. Drainage should not flow uncontrolled down any descending slope. Water should be directed away from foundations and not allowed to pond or seep into the ground adjacent to the footings. Paved areas should be sloped at two percent away from the structure. Downspouts should discharge onto paved surfaces sloping away from the structure or into a closed pipe system which outfalls to a street gutter or directly to a storm drain system. Pad drainage should be directed toward approved areas and not be blocked by other improvements. Additional recommendations can be found in Section 1804A of the California Building Code.

It is the owner's responsibility to maintain and clean drainage devices. In order to be effective, maintenance should be conducted on a regular and routine schedule and necessary corrections made prior to each rainy season.

6.3 PLAN REVIEW AND CONSTRUCTION OBSERVATIONS

It is recommended that specifications and foundation plans be reviewed by GeoTek prior to construction to check for conformance with the recommendations of this report. It is also recommended that GeoTek, Inc. representatives be present during site grading and foundation construction to observe and document proper implementation of the geotechnical recommendations. The owner/developer should verify that GeoTek, Inc. representatives perform at least the following duties:

- Observe site clearing and grubbing operations for proper removal of unsuitable materials.
- Observe and test bottom of removals prior to fill placement.
- Evaluate the suitability of on-site and import materials for fill placement and collect soil samples for laboratory testing where necessary.
- Observe the fill for uniformity during placement, including utility trench backfill. Also, perform field density testing of the fill materials.
- Observe and probe foundation excavations to confirm suitability of bearing materials with respect to density.

If requested, a construction observation and compaction report can be provided by GeoTek, Inc. which can comply with the requirements of the governmental agencies having jurisdiction over the project. GeoTek recommends that these agencies be notified prior to commencement of construction so that necessary grading permits can be obtained.

7. LIMITATIONS

The scope of GeoTek's evaluation is limited to the area explored that is shown on Figure 2a and Figure 2b. This evaluation does not and should in no way be construed to encompass any areas beyond the specific area of proposed construction as indicated to us by the client. Further, no evaluation of any existing site improvements is included. The scope of services for this evaluation is based on GeoTek's understanding of the project and the client's needs, GeoTek's proposal (Proposal No. P-0901621-SD) dated September 23, 2021 and geotechnical engineering standards normally used on similar projects in this region.

The earth materials observed on the project site appear to be representative of the area; however, soil and bedrock may vary in character between excavations and natural outcrops or conditions exposed during site construction. Site conditions may vary due to seasonal changes or other factors. GeoTek, Inc. assumes no responsibility or liability for work, testing or recommendations performed or provided by others.

Since GeoTek's recommendations are based on a limited subsurface evaluation and the site conditions observed and encountered, GeoTek's conclusions and recommendations are professional opinions that are limited to the extent of the available data. Observations during construction are important to allow for any change in recommendations found to be warranted. These opinions have been derived in accordance with current standards of practice and no warranty is expressed or implied. Standards of practice are subject to change with time.

APPENDIX A

EXPLORATORY LOGS

GEOTEK

A - FIELD TESTING AND SAMPLING PROCEDURES

Bulk Samples (Large)
These samples are normally large bags of earth materials over 20 pounds in weight collected from the field by means of hand digging or exploratory cuttings.

Bulk Samples (Small)
These are plastic bag samples which are normally airtight and contain less than 5 pounds in weight of earth materials collected from the field by means of hand digging or exploratory cuttings. These samples are primarily used for determining natural moisture content and classification indices.

B – EXPLORATORY LOG LEGEND

The following abbreviations and symbols often appear in the classification and description of soil and rock on the logs of borings:

SOILS

USCS	Unified Soil Classification System
f-c	Fine to coarse
f-m	Fine to medium

GEOLOGIC

B: Attitudes	Bedding: strike/dip
J: Attitudes	Joint: strike/dip
C: Contact line	
……..	Dashed line denotes USCS material change
———	Solid Line denotes unit / formational change
———	Thick solid line denotes end of the boring

(Additional denotations and symbols are provided on the log of Explorations)

Test Hole Radius, r =	2.00
Initial Depth to Water, D_O =	12
Total Test Hole Depth, D_T =	60

Equation - $I_t = \dfrac{\Delta H\,(60r)}{\Delta t\,(r+2H_{avg})}$

$H_O = D_T - D_O$ =	48.00
$H_F = D_T - D_F$ =	46.50
$\Delta H = \Delta D = H_O - H_F$ =	1.50
$H_{avg} = (H_O+H_F)/2$ =	47.25

I_t = 0.06 **Inches per Hour**

GEOTEK

Worksheet C.4-1: Categorization of Infiltration Feasibility Condition

Categorization of Infiltration Feasibility Condition		Worksheet C.4-1	
Part 1 - Full Infiltration Feasibility Screening Criteria **Would infiltration of the full design volume be feasible from a physical perspective without any undesirable consequences that cannot be reasonably mitigated?**			
Criteria	Screening Question	**Yes**	**No**
1	**Is the estimated reliable infiltration rate below proposed facility locations greater than 0.5 inches per hour?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.		X
Provide basis: Based on in-situ field percolation testing and infiltration analysis, the site underlying soils infiltrate at a rate less than 0.5 inches per hour. Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
2	**Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.		X
Provide basis: Not applicable. Answer to question number 1 expresses rates are below 0.5 inches per hour. Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			

Worksheet C.4-1 Page 2 of 4			
Criteria	Screening Question	**Yes**	**No**
3	**Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of groundwater contamination (shallow water table, stormwater pollutants or other factors) that cannot be mitigated to an acceptable level?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.		X
Provide basis: Not applicable. Answer to question number 1 expresses rates are below 0.5 inches per hour. Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
4	**Can infiltration greater than 0.5 inches per hour be allowed without causing potential water balance issues such as change of seasonality of ephemeral streams or increased discharge of contaminated groundwater to surface waters?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.		X
Provide basis: Not applicable. Answer to question number 1 expresses rates are below 0.5 inches per hour. Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
Part 1 Result*	If all answers to rows 1 - 4 are "**Yes**" a full infiltration design is potentially feasible. The feasibility screening category is **Full Infiltration** If any answer from row 1-4 is "**No**", infiltration may be possible to some extent but would not generally be feasible or desirable to achieve a "full infiltration" design. Proceed to Part 2		No

*To be completed using gathered site information and best professional judgment considering the definition of MEP in the MS4 Permit. Additional testing and/or studies may be required by City Engineer to substantiate findings.

Worksheet C.4-1 Page 3 of 4

Part 2 – Partial Infiltration vs. No Infiltration Feasibility Screening Criteria

Would infiltration of water in any appreciable amount be physically feasible without any negative consequences that cannot be reasonably mitigated?

Criteria	Screening Question	Yes	No
5	**Do soil and geologic conditions allow for infiltration in any appreciable rate or volume?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.	X	

Provide basis:

Based on in-situ field percolation testing and infiltration analysis, the site underlying soils infiltrate rate was measured at 0.06 and 0.24 inches per hour.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability and why it was not feasible to mitigate low infiltration rates.

6	**Can Infiltration in any appreciable quantity be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level**? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.		X

Provide basis:

The proposed plan consists of a stormwater quality basin in the western portion of the site at the top of an approximate 20 foot tall descending fill slope. It is our understanding, based on conversations with the project's civil engineer, the basin is proposed at a fixed location. Based on the proposed location of the stormwater quality basin, designed infiltration of surface water increases adverse geotechnical slope stability hazards.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability and why it was not feasible to mitigate low infiltration rates.

Worksheet C.4-1 Page 4 of 4			
Criteria	Screening Question	**Yes**	**No**
7	**Can Infiltration in any appreciable quantity be allowed without posing significant risk for groundwater related concerns (shallow water table, stormwater pollutants or other factors)?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.		X
Provide basis: Not applicable. Answer to question number 6 is no. Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability and why it was not feasible to mitigate low infiltration rates.			
8	**Can infiltration be allowed without violating downstream water rights**? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.		X
Provide basis: Not applicable. Answer to question number 6 is no. Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability and why it was not feasible to mitigate low infiltration rates.			
Part 2 Result*	If all answers from row 1-4 are yes then partial infiltration design is potentially feasible. The feasibility screening category is **Partial Infiltration.** If any answer from row 5-8 is no, then infiltration of any volume is considered to be **infeasible** within the drainage area. The feasibility screening category is **No Infiltration.**		No Infiltration

*To be completed using gathered site information and best professional judgment considering the definition of MEP in the MS4 Permit. Additional testing and/or studies may be required by Agency/Jurisdictions to substantiate findings

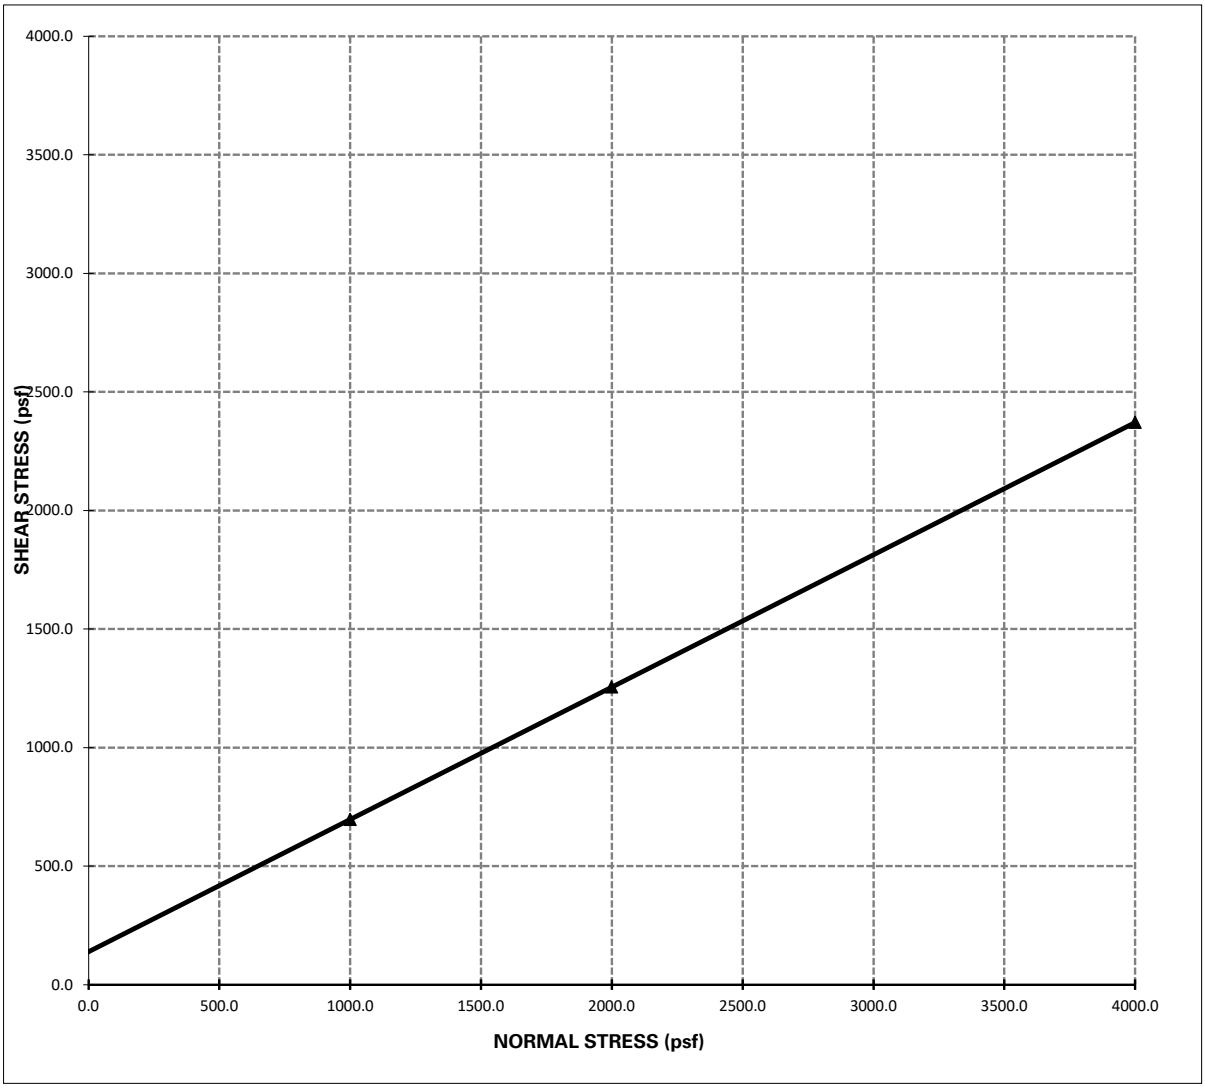
DIRECT SHEAR TEST

Project Name:	4991 Macario Drive	***Sample Location:***	B-3 @ 0-15 feet
Project Number:	3743-SD	***Date Tested:***	11/3/2021



Shear Strength: Φ = **29°** , **C = 139 psf**

Notes: 1 - The soil specimen used in the shear box was a ring sample remolded to approximately 90% relative compaction from a bulk sample collected during the field investigation.

2 - The above reflect direct shear strength at saturated conditions.

3 - The tests were run at a shear rate of 0.01 in/min.

A CALIFORNIA CORPORATION

October 25, 2021

Mr. Chris Livesey
GeoTek Inc.
1384 Poinsettia Avenue Suite A
Vista, CA 92081-8505

Project No. 47713

Dear Mr. Livesey:

Laboratory testing of the bulk soil sample delivered to our laboratory on 10/21/2021 has been completed.

Reference:	W.O. # 3743-SD
Project:	MLC Holdings, 4991 Macarijo Drive
Sample:	B-3 @ 0'-15'

Data sheets and graphical presentations are transmitted herewith for your use and information. Any untested portion of the samples will be retained for a period of sixty (60) days prior to disposal. The opportunity to be of service is appreciated, and should you have any questions, kindly call.

Very truly yours,

REGISTERED PROFESSIONAL ENGINEER

GENERAL GRADING GUIDELINES

GEOTEK

GENERAL GRADING GUIDELINES

Guidelines presented herein are intended to address general construction procedures for earthwork construction. Specific situations and conditions often arise which cannot reasonably be discussed in general guidelines, when anticipated these are discussed in the text of the report. Often unanticipated conditions are encountered which may necessitate modification or changes to these guidelines. It is our hope that these will assist the contractor to more efficiently complete the project by providing a reasonable understanding of the procedures that would be expected during earthwork and the testing and observation used to evaluate those procedures.

General

Grading should be performed to at least the minimum requirements of governing agencies, the California Building Code, CBC (2019) and the guidelines presented below.

Preconstruction Meeting

A preconstruction meeting should be held prior to site earthwork. Any questions the contractor has regarding our recommendations, general site conditions, apparent discrepancies between reported and actual conditions and/or differences in procedures the contractor intends to use should be brought up at that meeting. The contractor (including the main onsite representative) should review our report and these guidelines in advance of the meeting. Any comments the contractor may have regarding these guidelines should be brought up at that meeting.

Grading Observation and Testing

1. Observation of the fill placement should be provided by our representative during grading. Verbal communication during the course of each day will be used to inform the contractor of test results. The contractor should receive a copy of the "Daily Field Report" indicating results of field density tests that day. If our representative does not provide the contractor with these reports, our office should be notified.
2. Testing and observation procedures are, by their nature, specific to the work or area observed and location of the tests taken, variability may occur in other locations. The contractor is responsible for the uniformity of the grading operations; our observations and test results are intended to evaluate the contractor's overall level of efforts during grading. The contractor's personnel are the only individuals participating in all aspect of site work. Compaction testing and observation should not be considered as relieving the contractor's responsibility to properly compact the fill.
3. Cleanouts, processed ground to receive fill, key excavations, and subdrains should be observed by our representative prior to placing any fill. It will be the contractor's responsibility to notify our representative or office when such areas are ready for observation.
4. Density tests may be made on the surface material to receive fill, as considered warranted by this firm.
5. In general, density tests would be made at maximum intervals of two feet of fill height or every 1,000 cubic yards of fill placed. Criteria will vary depending on soil conditions and size of the fill. More frequent testing may be performed. In any case, an adequate number of field density tests should be made to evaluate the required compaction and moisture content is generally being obtained.

6. Laboratory testing to support field test procedures will be performed, as considered warranted, based on conditions encountered (e.g. change of material sources, types, etc.) Every effort will be made to process samples in the laboratory as quickly as possible and in progress construction projects are our first priority. However, laboratory workloads may cause in delays and some soils may require a **minimum of 48 to 72 hours to complete test procedures**. Whenever possible, our representative(s) should be informed in advance of operational changes that might result in different source areas for materials.
7. Procedures for testing of fill slopes are as follows:
   a) Density tests should be taken periodically during grading on the flat surface of the fill, three to five feet horizontally from the face of the slope.
   b) If a method other than over building and cutting back to the compacted core is to be employed, slope compaction testing during construction should include testing the outer six inches to three feet in the slope face to determine if the required compaction is being achieved.
8. Finish grade testing of slopes and pad surfaces should be performed after construction is complete.

Site Clearing

1. All vegetation, and other deleterious materials, should be removed from the site. If material is not immediately removed from the site it should be stockpiled in a designated area(s) well outside of all current work areas and delineated with flagging or other means. Site clearing should be performed in advance of any grading in a specific area.
2. Efforts should be made by the contractor to remove all organic or other deleterious material from the fill, as even the most diligent efforts may result in the incorporation of some materials. This is especially important when grading is occurring near the natural grade. All equipment operators should be aware of these efforts. Laborers may be required as root pickers.
3. Nonorganic debris or concrete may be placed in deeper fill areas provided the procedures used are observed and found acceptable by our representative. Typical procedures are similar to those indicated on Plate G-4.

Treatment of Existing Ground

1. Following site clearing, all surficial deposits of alluvium and colluvium as well as weathered or creep effected bedrock, should be removed (see Plates G-1, G-2 and G-3) unless otherwise specifically indicated in the text of this report.
2. In some cases, removal may be recommended to a specified depth (e.g. flat sites where partial alluvial removals may be sufficient). The contractor should not exceed these depths unless directed otherwise by our representative.
3. Groundwater existing in alluvial areas may make excavation difficult. Deeper removals than indicated in the text of the report may be necessary due to saturation during winter months.
4. Subsequent to removals, the natural ground should be processed to a depth of six inches, moistened to near optimum moisture conditions and compacted to fill standards.
5. Exploratory back hoe or dozer trenches still remaining after site removal should be excavated and filled with compacted fill if they can be located.

Subdrainage

1. Subdrainage systems should be provided in canyon bottoms prior to placing fill, and behind buttress and stabilization fills and in other areas indicated in the report. Subdrains should conform to schematic diagrams G-1 and G-5, and be acceptable to our representative.
2. For canyon subdrains, runs less than 500 feet may use six-inch pipe. Typically, runs in excess of 500 feet should have the lower end as eight-inch minimum.
3. Filter material should be clean, 1/2 to 1-inch gravel wrapped in a suitable filter fabric. Class 2 permeable filter material per California Department of Transportation Standards tested by this office to verify its suitability, may be used without filter fabric. A sample of the material should be provided to the Soils Engineer by the contractor at least two working days before it is delivered to the site. The filter should be clean with a wide range of sizes.
4. Approximate delineation of anticipated subdrain locations may be offered at 40-scale plan review stage. During grading, this office would evaluate the necessity of placing additional drains.
5. All subdrainage systems should be observed by our representative during construction and prior to covering with compacted fill.
6. Subdrains should outlet into storm drains where possible. Outlets should be located and protected. The need for backflow preventers should be assessed during construction.
7. Consideration should be given to having subdrains located by the project surveyors.

Fill Placement

1. Unless otherwise indicated, all site soil and bedrock may be reused for compacted fill; however, some special processing or handling may be required (see text of report).
2. Material used in the compacting process should be evenly spread, moisture conditioned, processed, and compacted in thin lifts six (6) to eight (8) inches in compacted thickness to obtain a uniformly dense layer. The fill should be placed and compacted on a nearly horizontal plane, unless otherwise found acceptable by our representative.
3. If the moisture content or relative density varies from that recommended by this firm, the contractor should rework the fill until it is in accordance with the following:
    a) Moisture content of the fill should be at or above optimum moisture. Moisture should be evenly distributed without wet and dry pockets. Pre-watering of cut or removal areas should be considered in addition to watering during fill placement, particularly in clay or dry surficial soils. The ability of the contractor to obtain the proper moisture content will control production rates.
    b) Each six-inch layer should be compacted to at least 90 percent of the maximum dry density in compliance with the testing method specified by the controlling governmental agency. In most cases, the testing method is ASTM Test Designation D 1557.
4. Rock fragments less than eight inches in diameter may be utilized in the fill, provided:
    a) They are not placed in concentrated pockets;
    b) There is a sufficient percentage of fine-grained material to surround the rocks;
    c) The distribution of the rocks is observed by, and acceptable to, our representative.
5. Rocks exceeding eight (8) inches in diameter should be taken off site, broken into smaller fragments, or placed in accordance with recommendations of this firm in areas designated suitable for rock disposal (see Plate G-4). On projects where significant large quantities of oversized materials are anticipated, alternate guidelines for placement may be included. If

significant oversize materials are encountered during construction, these guidelines should be requested.

6. In clay soil, dry or large chunks or blocks are common. If in excess of eight (8) inches minimum dimension, then they are considered as oversized. Sheepsfoot compactors or other suitable methods should be used to break up blocks. When dry, they should be moisture conditioned to provide a uniform condition with the surrounding fill.

Slope Construction

1. The contractor should obtain a minimum relative compaction of 90 percent out to the finished slope face of fill slopes. This may be achieved by either overbuilding the slope and cutting back to the compacted core, or by direct compaction of the slope face with suitable equipment.
2. Slopes trimmed to the compacted core should be overbuilt by at least three (3) feet with compaction efforts out to the edge of the false slope. Failure to properly compact the outer edge results in trimming not exposing the compacted core and additional compaction after trimming may be necessary.
3. If fill slopes are built "at grade" using direct compaction methods, then the slope construction should be performed so that a constant gradient is maintained throughout construction. Soil should not be "spilled" over the slope face nor should slopes be "pushed out" to obtain grades. Compaction equipment should compact each lift along the immediate top of slope. Slopes should be back rolled or otherwise compacted at approximately every 4 feet vertically as the slope is built.
4. Corners and bends in slopes should have special attention during construction as these are the most difficult areas to obtain proper compaction.
5. Cut slopes should be cut to the finished surface. Excessive undercutting and smoothing of the face with fill may necessitate stabilization.

Keyways, Buttress and Stabilization Fills

Keyways are needed to provide support for fill slope and various corrective procedures.

1. Side-hill fills should have an equipment-width key at their toe excavated through all surficial soil and into competent material and tilted back into the hill (Plates G-2, G-3). As the fill is elevated, it should be benched through surficial soil and slopewash, and into competent bedrock or other material deemed suitable by our representatives (See Plates G-1, G-2, and G-3).
2. Fill over cut slopes should be constructed in the following manner:
   a) All surficial soils and weathered rock materials should be removed at the cut-fill interface.
   b) A key at least one and one-half (1.5) equipment width wide (or as needed for compaction), and tipped at least one (1) foot into slope, should be excavated into competent materials and observed by our representative.
   c) The cut portion of the slope should be excavated prior to fill placement to evaluate if stabilization is necessary. The contractor should be responsible for any additional earthwork created by placing fill prior to cut excavation. (see Plate G-3 for schematic details.)
3. Daylight cut lots above descending natural slopes may require removal and replacement of the outer portion of the lot. A schematic diagram for this condition is presented on Plate G-2.

4. A basal key is needed for fill slopes extending over natural slopes. A schematic diagram for this condition is presented on Plate G-2.
5. All fill slopes should be provided with a key unless within the body of a larger overall fill mass. Please refer to Plate G-3 for specific guidelines.

Anticipated buttress and stabilization fills are discussed in the text of the report. The need to stabilize other proposed cut slopes will be evaluated during construction. Plate G-5 shows a schematic of buttress construction.

1. All backcuts should be excavated at gradients of 1:1 or flatter. The backcut configuration should be determined based on the design, exposed conditions, and need to maintain a minimum fill width and provide working room for the equipment.
2. On longer slopes, backcuts and keyways should be excavated in maximum 250 feet long segments. The specific configurations will be determined during construction.
3. All keys should be a minimum of two (2) feet deep at the toe and slope toward the heel at least one foot or two (2%) percent, whichever is greater.
4. Subdrains are to be placed for all stabilization slopes exceeding 10 feet in height. Lower slopes are subject to review. Drains may be required. Guidelines for subdrains are presented on Plate G-5.
5. Benching of backcuts during fill placement is required.

Lot Capping

1. When practical, the upper three (3) feet of material placed below finish grade should be comprised of the least expansive material available. Preferably, highly and very highly expansive materials should not be used. We will attempt to offer advice based on visual evaluations of the materials during grading, but it must be realized that laboratory testing is needed to evaluate the expansive potential of soil. Minimally, this testing takes two (2) to four (4) days to complete.
2. Transition lots (cut and fill) both per plan and those created by remedial grading (e.g. lots above stabilization fills, along daylight lines, above natural slopes, etc.) should be capped with a minimum three foot thick compacted fill blanket.
3. Cut pads should be observed by our representative(s) to evaluate the need for overexcavation and replacement with fill. This may be necessary to reduce water infiltration into highly fractured bedrock or other permeable zones, and/or due to differing expansive potential of materials beneath a structure. The overexcavation should be at least three feet. Deeper overexcavation may be recommended in some cases.

ROCK PLACEMENT AND ROCK FILL GUIDELINES

If large quantities of oversize material would be generated during grading, it's likely that such materials may require special handling for burial. Although alternatives may be developed in the field, the following methods of rock disposal are recommended on a preliminary basis.

Limited Larger Rock

When materials encountered are principally soil with limited quantities of larger rock fragments or boulders, placement in windrows is recommended. The following procedures should be applied:

1. Oversize rock (greater than 8 inches) should be placed in windrows.
    a) Windrows are rows of single file rocks placed to avoid nesting or clusters of rock.

b) Each adjacent rock should be approximately the same size (within ~one foot in diameter).

c) The maximum rock size allowed in windrows is four feet

2. A minimum vertical distance of three feet between lifts should be maintained. Also, the windrows should be offset from lift to lift. Rock windrows should not be closer than 15 feet to the face of fill slopes and sufficient space must be maintained for proper slope construction (see Plate G-4).

3. Rocks greater than eight inches in diameter should not be placed within seven feet of the finished subgrade for a roadway or pads and should be held below the depth of the lowest utility. This will allow easier trenching for utility lines.

4. Rocks greater than four feet in diameter should be broken down, if possible, or they may be placed in a dozer trench. Each trench should be excavated into the compacted fill a minimum of one foot deeper than the largest diameter of rock.

a) The rock should be placed in the trench and granular fill materials (SE>30) should be flooded into the trench to fill voids around the rock.

b) The over size rock trenches should be no closer together than 15 feet from any slope face.

c) Trenches at higher elevation should be staggered and there should be a minimum of four feet of compacted fill between the top of the one trench and the bottom of the next higher trench.

d) It would be necessary to verify 90 percent relative compaction in these pits. A 24 to 72 hour delay to allow for water dissipation should be anticipated prior to additional fill placement.

Structural Rock Fills

If the materials generated for placement in structural fills contains a significant percentage of material more than six (6) inches in one dimension, then placement using conventional soil fill methods with isolated windrows would not be feasible. In such cases the following could be considered:

1. Mixes of large rock or boulders may be placed as rock fill. They should be below the depth of all utilities both on pads and in roadways and below any proposed swimming pools or other excavations. If these fills are placed within seven (7) feet of finished grade, they may affect foundation design.

2. Rock fills are required to be placed in horizontal layers that should **not exceed two feet in thickness, or the maximum rock size present, which ever is less**. All rocks exceeding two feet should be broken down to a smaller size, windrowed (see above), or disposed of in non-structural fill areas. Localized larger rock up to 3 feet in largest dimension may be placed in rock fill as follows:

a) individual rocks are placed in a given lift so as to be roughly 50% exposed above the typical surface of the fill ,

b) loaded rock trucks or alternate compactors are worked around the rock on all sides to the satisfaction of the soil engineer,

c) the portion of the rock above grade is covered with a second lift.

3. Material placed in each lift should be well graded. No unfilled spaces (voids) should be permitted in the rock fill.

Compaction Procedures

Compaction of rock fills is largely procedural. The following procedures have been found to generally produce satisfactory compaction.

1. Provisions for routing of construction traffic over the fill should be implemented.
   a) Placement should be by rock trucks crossing the lift being placed and dumping at its edge.
   b) The trucks should be routed so that each pass across the fill is via a different path and that all areas are uniformly traversed.
   c) The dumped piles should be knocked down and spread by a large dozer (D-8 or larger suggested). (Water should be applied before and during spreading.)

2. Rock fill should be generously watered (sluiced)
   a) Water should be applied by water trucks to the:
      i) dump piles,
      ii) front face of the lift being placed and,
      iii) surface of the fill prior to compaction.
   b) No material should be placed without adequate water.
   c) The number of water trucks and water supply should be sufficient to provide constant water.
   d) Rock fill placement should be suspended when water trucks are unavailable:
      i) for more than 5 minutes straight, or,
      ii) for more than 10 minutes/hour.

3. In addition to the truck pattern and at the discretion of the soil engineer, large, rubber tired compactors may be required.
   a) The need for this equipment will depend largely on the ability of the operators to provide complete and uniform coverage by wheel rolling with the trucks.
   b) Other large compactors will also be considered by the soil engineer provided that required compaction is achieved.

4. Placement and compaction of the rock fill is largely procedural. Observation by trenching should be made to check:
   a) the general segregation of rock size,
   b) for any unfilled spaces between the large blocks, and
   c) the matrix compaction and moisture content.

5. Test fills may be required to evaluate relative compaction of finer grained zones or as deemed appropriate by the soil engineer.
   a) A lift should be constructed by the methods proposed, as proposed

6. Frequency of the test trenching is to be at the discretion of the soil engineer. Control areas may be used to evaluate the contractor's procedures.

7. A minimum horizontal distance of 15 feet should be maintained from the face of the rock fill and any finish slope face. At least the outer 15 feet should be built of conventional fill materials.

Piping Potential and Filter Blankets

Where conventional fill is placed over rock fill, the potential for piping (migration) of the fine grained material from the conventional fill into rock fills will need to be addressed.

The potential for particle migration is related to the grain size comparisons of the materials present and in contact with each other. Provided that 15 percent of the finer soil is larger than the effective

pore size of the coarse soil, then particle migration is substantially mitigated. This can be accomplished with a well-graded matrix material for the rock fill and a zone of fill similar to the matrix above it. The specific gradation of the fill materials placed during grading must be known to evaluate the need for any type of filter that may be necessary to cap the rock fills. This, unfortunately, can only be accurately determined during construction.

In the event that poorly graded matrix is used in the rock fills, properly graded filter blankets 2 to 3 feet thick separating rock fills and conventional fill may be needed. As an alternative, use of two layers of filter fabric (Mirafi 700 x or equivalent) could be employed on top of the rock fill. In order to mitigate excess puncturing, the surface of the rock fill should be well broken down and smoothed prior to placing the filter fabric. The first layer of the fabric may then be placed and covered with relatively permeable fill material (with respect to overlying material) 1 to 2 feet thick. The relative permeable material should be compacted to fill standards. The second layer of fabric should be placed and conventional fill placement continued.

Subdrainage

Rock fill areas should be tied to a subdrainage system. If conventional fill is placed that separates the rock from the main canyon subdrain, then a secondary system should be installed. A system consisting of an adequately graded base (3 to 4 percent to the lower side) with a collector system and outlets may suffice.

Additionally, at approximately every 25 foot vertical interval, a collector system with outlets should be placed at the interface of the rock fill and the conventional fill blanketing a fill slope.

Monitoring

Depending upon the depth of the rock fill and other factors, monitoring for settlement of the fill areas may be needed following completion of grading. Typically, if rock fill depths exceed 40 feet, monitoring would be recommend prior to construction of any settlement sensitive improvements. Delays of 3 to 6 months or longer can be expected prior to the start of construction.

UTILITY TRENCH CONSTRUCTION AND BACKFILL

Utility trench excavation and backfill is the contractor's responsibility. The geotechnical consultant typically provides periodic observation and testing of these operations. While efforts are made to make sufficient observations and tests to verify that the contractors' methods and procedures are adequate to achieve proper compaction, it is typically impractical to observe all backfill procedures. As such, it is critical that the contractor use consistent backfill procedures.

Compaction methods vary for trench compaction and experience indicates many methods can be successful. However, procedures that "worked" on previous projects may or may not prove effective on a given site. The contractor(s) should outline the procedures proposed, so that we may discuss them **prior** to construction. We will offer comments based on our knowledge of site conditions and experience.

1. Utility trench backfill in slopes, structural areas, in streets and beneath flat work or hardscape should be brought to at least optimum moisture and compacted to at least 90 percent of the laboratory standard. Soil should be moisture conditioned prior to placing in the trench.

2. Flooding and jetting are not typically recommended or acceptable for native soils. Flooding or jetting may be used with select sand having a Sand Equivalent (SE) of 30 or higher. This is typically limited to the following uses:
   a) shallow (12 + inches) under slab interior trenches and,
   b) as bedding in pipe zone.

   The water should be allowed to dissipate prior to pouring slabs or completing trench compaction.
3. Care should be taken not to place soils at high moisture content within the upper three feet of the trench backfill in street areas, as overly wet soils may impact subgrade preparation. Moisture may be reduced to 2% below optimum moisture in areas to be paved within the upper three feet below sub grade.
4. Sand backfill should not be allowed in exterior trenches adjacent to and within an area extending below a 1:1 projection from the outside bottom edge of a footing, unless it is similar to the surrounding soil.
5. Trench compaction testing is generally at the discretion of the geotechnical consultant. Testing frequency will be based on trench depth and the contractor's procedures. A probing rod would be used to assess the consistency of compaction between tested areas and untested areas. If zones are found that are considered less compact than other areas, this would be brought to the contractor's attention.

JOB SAFETY

General

Personnel safety is a primary concern on all job sites. The following summaries are safety considerations for use by all our employees on multi-employer construction sites. On ground personnel are at highest risk of injury and possible fatality on grading construction projects. The company recognizes that construction activities will vary on each site and that job site safety is the contractor's responsibility. However, it is, imperative that all personnel be safety conscious to avoid accidents and potential injury.

In an effort to minimize risks associated with geotechnical testing and observation, the following precautions are to be implemented for the safety of our field personnel on grading and construction projects.

1. Safety Meetings: Our field personnel are directed to attend the contractor's regularly scheduled safety meetings.
2. Safety Vests: Safety vests are provided for and are to be worn by our personnel while on the job site.
3. Safety Flags: Safety flags are provided to our field technicians; one is to be affixed to the vehicle when on site, the other is to be placed atop the spoil pile on all test pits.

In the event that the contractor's representative observes any of our personnel not following the above, we request that it be brought to the attention of our office.

Test Pits Location, Orientation and Clearance

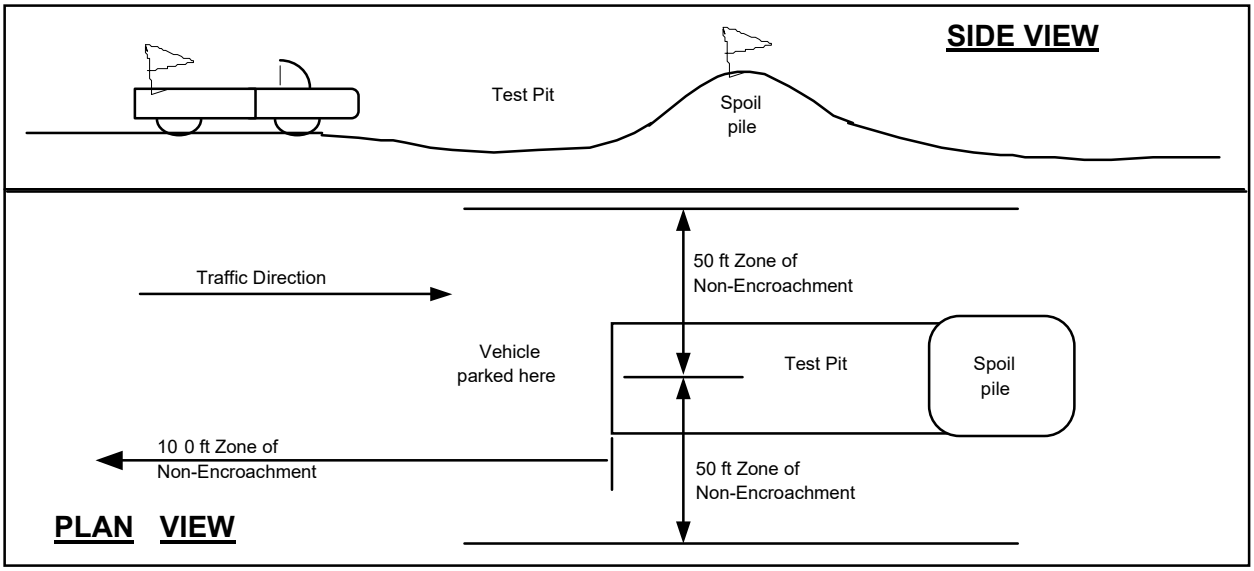
The technician is responsible for selecting test pit locations. The primary concern is the technician's safety. However, it is necessary to take sufficient tests at various locations to obtain a representative sampling of the fill. As such, efforts will be made to coordinate locations with the grading contractors authorized representatives (e.g. dump man, operator, supervisor, grade checker, etc.),

and to select locations following or behind the established traffic pattern, preferably outside of current traffic. The contractors authorized representative should direct excavation of the pit and safety during the test period. Again, safety is the paramount concern.

Test pits should be excavated so that the spoil pile is placed away from oncoming traffic. The technician's vehicle is to be placed next to the test pit, opposite the spoil pile. This necessitates that the fill be maintained in a drivable condition. Alternatively, the contractor may opt to park a piece of equipment in front of test pits, particularly in small fill areas or those with limited access.

A zone of non-encroachment should be established for all test pits (see diagram below). No grading equipment should enter this zone during the test procedure. The zone should extend outward to the sides approximately 50 feet from the center of the test pit and 100 feet in the direction of traffic flow. This zone is established both for safety and to avoid excessive ground vibration, which typically decreases test results.

TEST PIT SAFETY PLAN



Slope Tests

When taking slope tests, the technician should park their vehicle directly above or below the test location on the slope. The contractor's representative should effectively keep all equipment at a safe operation distance (e.g. 50 feet) away from the slope during testing.

The technician is directed to withdraw from the active portion of the fill as soon as possible following testing. The technician's vehicle should be parked at the perimeter of the fill in a highly visible location.

Trench Safety

It is the contractor's responsibility to provide safe access into trenches where compaction testing is needed. Trenches for all utilities should be excavated in accordance with CAL-OSHA and any other applicable safety standards. Safe conditions will be required to enable compaction testing of the trench backfill.

All utility trench excavations in excess of 5 feet deep, which a person enters, are to be shored or laid back. Trench access should be provided in accordance with OSHA standards. Our personnel are directed not to enter any trench by being lowered or "riding down" on the equipment.

Our personnel are directed not to enter any excavation which;

1. is 5 feet or deeper unless shored or laid back,
2. exit points or ladders are not provided,
3. displays any evidence of instability, has any loose rock or other debris which could fall into the trench, or
4. displays any other evidence of any unsafe conditions regardless of depth.

If the contractor fails to provide safe access to trenches for compaction testing, our company policy requires that the soil technician withdraws and notifies their supervisor. The contractor's representative will then be contacted in an effort to affect a solution. All backfill not tested due to safety concerns or other reasons is subject to reprocessing and/or removal.

Procedures

In the event that the technician's safety is jeopardized or compromised as a result of the contractor's failure to comply with any of the above, the technician is directed to inform both the developer's and contractor's representatives. If the condition is not rectified, the technician is required, by company policy, to immediately withdraw and notify their supervisor. The contractor's representative will then be contacted in an effort to affect a solution. No further testing will be performed until the situation is rectified. Any fill placed in the interim can be considered unacceptable and subject to reprocessing, recompaction or removal.

In the event that the soil technician does not comply with the above or other established safety guidelines, we request that the contractor bring this to technician's attention and notify our project manager or office. Effective communication and coordination between the contractors' representative and the field technician(s) is strongly encouraged in order to implement the above safety program and safety in general.

The safety procedures outlined above should be discussed at the contractor's safety meetings. This will serve to inform and remind equipment operators of these safety procedures particularly the zone of non-encroachment.

The safety procedures outlined above should be discussed at the contractor's safety meetings. This will serve to inform and remind equipment operators of these safety procedures particularly the zone of non-encroachment.

Paleontological Resources Assessment

6 February 2023

Shawna Johnson
Dudek
605 Third Street
Encinitas, CA 92024

RE: Paleontological Records Search – Pacifica Elementary School

Dear Ms. Johnson:

This letter presents the results of a paleontological records search conducted for the Pacifica Elementary School project (Project), located in the North Valley neighborhood in the northwestern portion of the City of Oceanside, San Diego County, California. The Project site is bordered to the north by residential development and Macario Drive; to the east by Monica Circle, Roja Drive, and residential development; and to the south and west by residential development.

Methods

A review of published geological maps covering the Project site and surrounding area was conducted to determine the specific geologic units underlying the Project site. Each geologic unit was subsequently assigned a paleontological resource sensitivity (Deméré and Walsh, 1993). In addition, a search of the paleontological collection records housed at the San Diego Natural History Museum (SDNHM) was conducted in order to determine if any documented fossil collection localities occur at the Project site or within the immediate surrounding area.

Results

Published geological reports (e.g., Kennedy and Tan, 2007) covering the Project area indicate that the proposed Project has the potential to impact late Pleistocene- to Holocene-age young alluvial flood plain deposits, middle to late Pleistocene-age old alluvial flood plain deposits, and the middle Eocene-age Santiago Formation. These geologic units and their paleontological sensitivity are summarized below.

The SDNHM does not have any recorded fossil localities within a one mile radius of the Project site (SDNHM, unpublished paleontological collections data; Figure 1).

Young alluvial flood plain deposits – Late Pleistocene- to Holocene-age (less than approximately 129,000 years old) young alluvial flood plain deposits underlie the central portion of the Project site at the surface. These deposits generally consist of unconsolidated sandy, silty, or clay-bearing alluvium deposited by the action of recently active streams. These deposits are assigned a low paleontological sensitivity based on their relatively young geologic age and lack of recorded fossil collection localities (Deméré and Walsh, 1993). However, they are likely underlain in the relatively shallow subsurface by a geologic unit with high paleontological sensitivity (i.e., the Santiago Formation, see below).

Old alluvial flood plain deposits – Middle to late Pleistocene-age (approximately 774,000 to 11,700 years old) old alluvial flood plain deposits underlie the southern portion of the Project site. These deposits consist of sediments derived from the surrounding uplands and deposited by the action of local streams. Elsewhere in northern San Diego County, similar deposits exposed in Pala Mesa, Bonsall, Vista, Carlsbad, and Oceanside have produced fossils of terrestrial plants, freshwater and terrestrial invertebrates (e.g., clams and snails), and terrestrial mammals (e.g., rodents, horse, tapir, camel, llama, deer, bison, mastodon, mammoth, and giant ground sloth) (Deméré and Walsh, 1993). Due to the scattered nature of fossil-bearing deposits within this geologic unit, old alluvial flood plain deposits are assigned a moderate paleontological sensitivity.

Santiago Formation – Strata of the middle Eocene-age (approximately 49 to 40 million years old) Santiago Formation underlie the northern portion of the Project site. Elsewhere in northwestern San Diego County, the Santiago Formation has produced significant assemblages of terrestrial fossil vertebrates, along with assemblages of marine and estuarine mollusks, and is considered to have a high paleontological sensitivity (Deméré and Walsh, 1993).

Summary and Recommendations

The high paleontological sensitivity of the Santiago Formation and the moderate paleontological sensitivity of old alluvial flood plain deposits in San Diego County (Deméré and Walsh, 1993) suggests the potential for construction of the proposed Project to result in impacts to paleontological resources. Any proposed excavation activities that extend deep enough to encounter previously undisturbed deposits of these geologic units (i.e., below the depth of any previously imported artificial fill or disturbed sediments present within the Project site) have the potential to impact the paleontological resources preserved therein. If such excavation is required for Project construction, implementation of a complete paleontological resource mitigation program during ground-disturbing activities is recommended. The mitigation program must include, at a minimum, measures for construction monitoring, fossil salvage and data recovery, laboratory preparation and curation of the fossils at an appropriate regional repository, and production of a final paleontological mitigation report.

If you have any questions concerning these findings please feel free to contact me at kmueller@sdnhm.org.

Sincerely,

Kirstin Mueller
Assistant Report Writer
San Diego Natural History Museum

RE: Phase I Environmental Site Assessment
4991 Macario Drive
Oceanside, California 92057
Hillmann Project No: C3-8695

Dear Mr. Maehara:

Hillmann Consulting LLC is pleased to provide the results of our Phase I Environmental Site Assessment of the above referenced property. This assessment was performed in general accordance with the scope and limitations of ASTM Practice E1527-13, which is the latest version of the E1527 standard published by the ASTM.

We appreciate the opportunity to provide environmental due diligence services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact our office at 714-634-9500.

Sincerely,

Hillmann Consulting, LLC

VEC	– Vapor Encroachment Condition
VOC	– Volatile Organic Compound

1.0 FINDINGS, OPINIONS, AND CONCLUSIONS

Hillmann Consulting, LLC (Hillmann) performed a Phase I Environmental Site Assessment (ESA) of 4991 Macario Drive, Oceanside, California (the Property). The assessment has been conducted in accordance with our contracted scope of work and the ASTM Standard Practice E 1527-13 for Phase I Environmental Site Assessments and All Appropriate Inquiries (AAI) Final Rule 40 CFR Part 312. This section contains a summary of findings, opinions and conclusions made by this assessment. However, this section, alone, does not constitute the complete assessment. The report must be read in its entirety.

1.1 Summary of Project Details

Primary Street Address:		4991 Macario Drive			
City:	Oceanside	**County:**	San Diego	**State:**	California
Tax ID/Parcel Number:		122-190-19-00 and 157-070-42-00			
Property Owner:		Oceanside Unified School District			
Zoning Designation:		Governmental/Public Use			
Approx. Property Area:		14.19 acres			
Buildings/# of Floors		N/A			
Approx. Building Area:		N/A			
Approx. Year Built:		N/A			
Commercial Occupants:		None - vacant			
Current Use:		Vacant lot			
Prior Uses:		Pacifica Elementary School			
Inspected By:		Ms. Gabriela Cyrulik			
Site Contact/Company:		Mr. Mitchell Maynard / Site Manager			
Site Escort/Company:		Unescorted			
Inspection Date:		October 12, 2021			
Weather Conditions:		Sunny, 70 degrees F

1.3 Findings, Opinions and Conclusions

1.3.1 Recognized Environmental Conditions

Hillmann has performed a Phase I Environmental Site Assessment in accordance with the scope and limitations of ASTM Practice E1527-13 of the Property as described in Section 2 of this report. Any additions to, exceptions to, or deletions from this practice are also described in Section 2 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Property, except for the following:

RECOGNIZED ENVIRONMENTAL CONDITIONS	
	No RECs were identified.
HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS	
	No HRECs were identified.
CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS	
	No CRECs were identified
SIGNIFICANT DATA GAPS	
	No SDGs were identified.

1.3.2 REC Response Action Recommendations

The following table presents recommended response actions to the identified RECs for further investigation and/or corrective action:

REC RESPONSE ACTION SUMMARY TABLE	
REC	**Response Action**
	(No RECs were identified)

1.3.3 Notable Environmental Conditions / De Minimis Conditions

The following environmental conditions were identified, but are not considered to be a REC in connection with the Property:

NOTABLE ENVIRONMENTAL CONDITIONS / DE MINIMIS CONDITIONS	
1.	The Property consisted of vacant land prior to the mid-1970s, with an artificial pond present between the 1940s and 1960s. The Property was acquired by the Oceanside Unified School District in 1971 and the Pacifica Elementary School was subsequently constructed on-site. In approximately 2004, the former school structure was demolished and the Property continued to be used by the district with modular structures until the mid-2010s. The Property has remained unoccupied since approximately 2016.
2.	Hillmann observed two (2) utility owned pad-mounted transformers on the northwest corner of the Property. No staining and/or leakage was observed.
3.	Pacifica Elementary School at 4991 Macario Street is listed on the ENVIROSTOR, SCH, CERS databases. The ENVIROTOR/SCH listing indicated that the Property was on a DTSC – School Investigation site type, with a No Further Action letter provided as of 11/05/2003, indicating no contaminants had been found. The CERS listing indicated the Property name, address, and a CERS ID of 37820031. Hillmann reviewed available electronic documents posted on the Envirostor database, including a letter dated Nov 4, 2003 from the DTSC to the school district. The letter stated, in part: "*The Department of Toxic Substances Control (DTSC) reviewed the Phase I Environmental Site Assessment Addendum (Addendum), titled 'Additional Environmental Background Data," dated October 7, 2003 and received October 14, 2003. DTSC has also reviewed additional correspondences, received on September 5, and October 31, 2003. All additional information was prepared by Construction, Testing, and Engineering, Incorporated (CTE). The Addendum and correspondences were forwarded in response to a previous determination that a Preliminary Environmental Assessment was required for the site… The additional aerial photographs and a site appraisal report in the Addendum confirm that the site was undeveloped and not used for agriculture prior to construction of the school. … Based on the information provided in the Addendum and a site visit conducted by DTSC on September 11, 2003, neither a release of hazardous material nor the presence of naturally occurring hazardous material, which would pose a threat to human health or the environment under unrestricted land use, was indicated at the site. Therefore, DTSC concurs with the conclusion of the Addendum that further environmental investigation of the site is not required and hereby approves the Addendum. As with any real property, if previously unidentified contamination is discovered at the site, additional assessment, investigation, and cleanup may be required."* A separate DTSC letter to the district dated August 14, 2003 makes reference to additional information requested by DTSC and submitted by the district regarding on-site "import fill". Hillmann has requested copies of all environmental files for the former school investigation from both the school district and the DTSC. The available information in the November 4, 2003 DTSC letter and the closed Envirostor case status does not suggest a REC in connection with the former school investigation. However, a request and review of all available environmental documents associated with the Envirostor case has not been conducted and remains pending.

1.3.4 Environmental Professional Statement

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a *property* of the nature, history and setting of the subject *property*. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

David Rutherford
Environmental Professional

1.4 Business Environmental Risks / Non-ASTM Scope

Hillmann has performed a limited review of the following potential Business Environmental Risks (BER), also known as "Non-ASTM Scope concerns", in accordance with the contracted scope of work scope for this assessment. The following is a summary of findings for applicable BERs. For a more detailed discussion of the findings and contracted scope of work, please see the referenced report section.

BUSINESS ENVIRONMENTAL RISKS / NON-ASTM SCOPE			
Subject	**Findings**	**Not Appl.**	**Rpt. Ref.**
Asbestos		X	7.1
Lead Paint		X	7.2
Radon	Property is located in the USEPA radon designation Zone 3 or 'low risk' area for radon.		7.3
Mold / Microbial Damage		X	7.4
NWI Wetlands	No mapped wetland areas were depicted at the Property.		7.5
Lead in Drinking Water	Potable water service at the Property is provided by a utility connection with the City of Oceanside. A recently published water quality report from the utility indicated compliance with USEPA water quality standards for lead in drinking water. A copy of the report has been attached in Appendix F.		7.6

2.0 INTRODUCTION

2.1 Purpose and Scope

This assessment was conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E1527-13. The ASTM describes these methodologies as representing good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the "landowner liability protections," or "LLPs"): that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35) (B). The primary goal of the processes established by ASTM E1527-13 is to identify *recognized environmental conditions* in connection with the Property.

The term *recognized environmental condition (REC)* is defined by the ASTM as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

The ASTM has also defined the terms *historical recognized environmental conditions* and *controlled recognized environmental conditions* as two additional types of RECs. The term *historical recognized environmental condition (HREC)* is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls or engineering controls).

The term *controlled recognized environmental condition (CREC)* is defined as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

Conditions determined to be *"de minimis conditions"* are not considered to be RECs, HRECs or CRECs. *De minimis condition* is defined by the ASTM, "…as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

The chief components of this assessment are generally described as follows:

- A non-invasive visual reconnaissance of the Property and adjoining properties in accordance with ASTM guidelines for evidence of RECs.

- Interviews of past and present owners and occupants and state and local government officials, seeking information related to the potential presence of RECs at the Property.

- A review of standard physical record sources for available topographic, geologic and groundwater data.

- A review of standard historic record sources, such as fire insurance maps, city directories, aerial photographs, prior reports and interviews, etc., to determine prior uses of the Property from the present, back to the Property's first developed use, or back to 1940, whichever is earlier.

- A review of standard environmental record sources including federal and state environmental databases, and additional environmental record sources, to identify potential regulatory concerns with the Property, adjoining properties and properties located within the surrounding area.

An evaluation of environmental or other regulatory compliance matters is excluded from the scope of this assessment.

These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

2.1.1 Business Environmental Risks/Non-ASTM Scope Considerations

In accordance with our contract agreement, Hillmann may have addressed the following potential environmental subject matters that are outside of the requirements of the ASTM E1527-13 standard:

Asbestos-Containing Materials (ACM): A cursory non-intrusive visual screening for the presence of suspect ACM within the accessed areas of buildings built prior to 1990 on the Property. It is emphasized that this cursory non-intrusive visual screening does not constitute an asbestos survey/inspection of the premises. An asbestos survey/inspection should be sought by the report User(s) if more certainty is desired regarding ACM and potential asbestos hazards at the Property. Furthermore, a review of regulatory compliance matters pertaining to asbestos is excluded from the scope of work.

Lead-Based Paint (LBP): A cursory non-intrusive visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1980 on the Property. It is emphasized that this cursory non-intrusive visual screening does not constitute a comprehensive survey for LBP or potential lead hazards. A comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding LBP at the Property. Furthermore, a review of regulatory compliance matters pertaining to lead-based paint is excluded from the scope of work.

USEPA Designated Radon Potential: Review of general non-site specific data published by the USEPA regarding the Radon Zone classification for the area of the Property.

Mold/Microbial Damage: A cursory non-intrusive visual screening within the accessed areas of buildings on the Property for evidence of systemic microbial problems, including visible mold

growth, water damaged building materials or musty odors. It is emphasized that this cursory non-intrusive visual screening does not constitute a comprehensive survey for moisture/mold/microbial damage. A more comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding the potential for moisture/mold/microbial damages at the Property.

NWI Wetlands: Review of US Fish and Wildlife Service National Wetland Inventory digitized data of mapped wetlands as presented in the attached EDR Radius Map plus Geocheck Report.

It is emphasized that, regardless of the wetlands data obtained via the EDR Geocheck-Physical Setting Source Addendum, a delineation of regulated wetlands by a qualified professional would be warranted to determine the presence or absence of regulated wetlands at the Property.

Lead in Drinking Water: Review of the potential for elevated levels of lead in the drinking water by determining the source of the drinking water supply and a review of available testing or compliance data reports.

2.2 Property Location/Legal Description

Property location and legal description details are described as follows:

Primary Street Address:	4991 Macario Drive				
City:	Oceanside	**County:**	San Diego	**State:**	California
Tax ID/Parcel Number:	122-190-19-00 and 157-070-42-00				
Approx. Land Area:	14.19 acres				
Apprx. Latitude/Longitude:	North 33.255975 degrees/West 117.304033 degrees				
Additional Details (if appl.):	NA				
Property Owner:	Oceanside Unified School District				
Zoning Designation:	Governmental/Public Use				

2.3 Data Gaps

A *data gap* is defined by the ASTM as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. A data gap is only significant if other information and/or professional experience raises reasonable concerns involving the data gap and the ability to determine the presence or absence of recognized environmental conditions. The following table summarizes data gaps encountered during the assessment as well as a discussion of their significance.

Data Gap:	Significant (Yes/No)?	Discussion
Historical records data failure	No	The date and/or type of the first developed use of the Property was not documented.

		Record gaps exceeding five years were encountered; however, no significant site use changes are suspected during these intervals.
Response to agency records requests not received as of date of report.	No	Any additional information indicative of a REC will be forwarded upon receipt.

2.4 User Reliance

This report is for the exclusive use of the User(s) named on the front cover. No other party(ies) shall have any right to rely on the content of this report without first obtaining the consent of the original report User; and without obtaining written consent from Hillmann in the form of a letter of reliance or report recertification.

2.5 Significant Assumptions

The following significant assumptions are made:

- The site operations at the time of the site visit are assumed to reflect typical site conditions relative to potential environmental conditions and that no concealment of environmental conditions or releases by site owners or occupants has occurred. Likewise, it is assumed that no areas of the Property with potential environmental concerns or RECs were concealed or otherwise not reported, intentionally or unknowingly, by the Property owners/occupants and/or site escort at the time of the site visit.

- For the purpose of estimating the approximate direction of groundwater flow in the absence of site specific groundwater data, unless indicated otherwise, an assumption has been made that the gradient of groundwater flow follows the surface topography of the Property and immediate surrounding area.

2.6 General Limitations and Exceptions

2.6.1 Limitations

The report turnaround time specified by the contract agreement for this assessment may present a limitation to the availability of pertinent regulatory agency records. Such limitations, if encountered, are further specified in Section 4.4.

Significant limitations related to the condition or accessibility of the Property at the time of the site reconnaissance, if encountered, are reported in Section 5.1.

2.6.2 Other Exceptions or Deletions

No other exceptions or deletions from the ASTM Standard E1527-13 are reported.

2.6.3 Special Terms and Conditions

This Phase I Environmental Site Assessment has been prepared using reasonable efforts in each phase of its work to identify recognized environmental conditions associated with hazardous substances, wastes and petroleum products at the Property. Findings within this report are based on information collected from observations made on the day of the site reconnaissance and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, site development, redevelopment, or other construction purposes. No representation or warranty is made that the past or current operations at the Property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes.

Findings, conclusions and recommendations presented in this report are based on visual observations of the Property, interviews conducted, the records reviewed, information provided by the Client, and/or a review of readily available and supplied drawings and documents. Information obtained during the assessment, whether written, graphic or verbal, provided by the Property contact(s) or as shown on any documents reviewed or received from the Property contact, owner or agent, or government agency source; is assumed to be accurate except as specifically stated otherwise in this report. Independent verification of the accuracy or completeness of all information reviewed or received during the course of this assessment is not made and excluded from the scope of work for this assessment. No warranty or guarantee is made of the accuracy or completeness of information that was obtained from ostensibly knowledgeable individuals, regulatory agency representatives or other secondary sources.

Regardless of the findings stated in this report, Hillmann is not responsible for consequences or conditions arising from facts that were concealed, withheld or not fully disclosed at the time the assessment was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The regulatory research is designed to meet the requirements of ASTM Standard E1527-13. Hillmann can neither warrant nor guarantee the accuracy or completeness of the information obtained from the regulatory database report provider during the course of this assessment.

Subsurface conditions may differ from the conditions implied by the surface observations and can only be reliably evaluated through intrusive techniques.

Reasonable efforts have been made during this assessment to identify aboveground and underground storage tanks and ancillary equipment. Reasonable efforts are limited to information gained from visual observation of largely unobstructed areas, recorded database information held in public record and available information gathered from interviews. Such methods may not identify

surficial and subsurface features that may have been hidden from view due to parked automobiles and other vehicles, snow cover, vegetative growth, pavement, construction or debris pile storage or incorrect information from sources.

No guarantee, explicit or implied, is made that the records pertaining to historical ownership or occupancy which were reviewed represent a comprehensive or precise delineation of past Property ownership or tenancy for legal purposes.

The ASTM E1527-13 standard states that recommendations are not required to be included in a Phase I ESA report; however, further that recommendations are an additional service that may be useful in the User's analysis of landowner liability protections or business environmental risks; and that the User should consider whether recommendations for additional inquiries or other services are desired.

The recommended response actions to the identified RECs presented in Section 1.3, if any, are not intended to represent the only course(s) of action to take; nor does it imply any opinion as to the timing of the action. Furthermore, it is emphasized that additional response actions may become warranted depending on the outcome of the initial action(s) taken. Hillmann advises that consultation with legal counsel familiar with environmental and real estate law may be beneficial to the decision making process for the type and timing of a response action to identified RECs, if any.

Due to the limited nature of our review of potential Business Environmental Risks, the User of the report should consider whether to take additional action(s) to further define, properly manage and/or mitigate potential BERs.

In the event of any conflict between the terms and conditions of this report and the terms and conditions of the consulting services agreement for this project, the consulting services agreement shall control.

3.0 USER PROVIDED INFORMATION

The term "User" is defined by ASTM as the party seeking to use Practice E1527 to complete an environmental site assessment of the Property; specifically, the entities named on the front cover to which the report has been addressed.

3.1 Prior Environmental Reports/Documentation

No prior environmental reports/documentation were provided.

3.2 User Questionnaire

Section 6 of the ASTM E1527-13 standard describes certain tasks required to be performed by the report User in order to qualify for landowner liability protections to CERCLA liability. To assist the report User to meet these requirements, the ASTM E1527-13 standard recommends a questionnaire of inquiries (User Questionnaire) specified in 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31 be provided to the original report User. The following is a summary of the User's response:

Question:	Yes/No:	Detail:
Environmental liens that are filed or recorded against the property: Did a search of recorded land title records identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	No	
Activity and use limitations that are in place on the property or that have been filed or recorded against the property: Did a search of recorded land title records (or judicial records where appropriate, identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	No	
Specialized knowledge or experience of the person seeking to qualify for the LLP: Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	No	
Relationship of the purchase price to the fair market value of the property if it were not contaminated: Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	No	
Commonly Known or Reasonably Ascertainable Information: Are you aware of commonly known or reasonably ascertainable information about the property that would help the		

Question:	Yes/No:	Detail:
environmental professional to identify conditions indicative of releases or threatened releases? For example,		
-Do you know the past uses of the property?	Yes	Elementary School
-Do you know of specific chemicals that are present or were once present at the property?	No	
-Do you know of spills or other chemical releases that have taken place at the property?	No	
-Do you know of any environmental cleanups that have taken place at the property?	No	
The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation: Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?	No	
Litigation/Administrative Proceedings/Government Notices As the User of this ESA, do you have knowledge of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property; and (3) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.	No	

NR-no response

3.3 Reason for Performing Phase I ESA

The User did not indicate the purpose of the assessment. In accordance with ASTM E1527-13, it is assumed that the Phase I ESA was being performed in order to qualify for landowner liability protection to CERCLA liability.

4.0 RECORDS REVIEW

4.1 Physical Setting Sources

The following physical setting sources were reviewed:

Source	Discussion
USGS 7.5 minute Topographic Map Data: (EDR Geocheck-Physical Setting Source Addendum)	The Property lies at an elevation of approximately 89 feet above mean sea level. An interpretation of topographic contour lines as well as a review of the EDR Geocheck-General Topographic Gradient suggested terrain sloping downward towards the east-southeast. The closest down gradient water body is Libby Lake, located approximately 0.22 miles to the southwest.
USDA SCS Soil Data: (EDR Geocheck-Physical Setting Source Addendum)	The soil type at the Property is classified as "Grangeville". This soil type is described as fine sandy loam with moderate infiltration rates. Additionally, the soil type "La Flores" was identified at the Property and is described as loamy fine sand with very slow infiltration rates.
Geologic Data: (EDR Geocheck-Physical Setting Source Addendum)	The geologic formation in the vicinity of the Property is described as a stratified sequence of the Mesozoic Era, Cretaceous System, and Cretaceous granitic rocks Series.
Prior Env. Reports: (Section 3.1)	No prior environmental reports were obtained.
Additional Sources/ Data:	No additional physical setting sources or data was obtained.
Groundwater Flow Discussion:	Based on a review of the above information as well as observation of the site, the direction of shallow groundwater flow at the site is inferred to be towards the east-southeast.
NWI Wetlands Data: (EDR Geocheck-Physical Setting Source Addendum)	No NWI mapped wetlands areas were depicted at the Property.

4.2 Historical Use – Property and Adjoining Properties

Research has been conducted in an attempt to develop a history of the previous uses of the property and surrounding area, in order to help identify the likelihood of past uses having led to RECs in connection with the property. Standard historical sources have been sought in an attempt to document the past uses of the Property as far back as it can be shown that the Property contained structures; or from the time the Property was first used for residential, agricultural, commercial, industrial or governmental purposes.

4.2.1 Fire Insurance Maps

A Certified Sanborn Map Report was obtained from EDR for a review of published historic fire insurance maps for the Property and surrounding area. The following is a summary of site uses and notable details depicted by the available maps:

Year(s)	Prop/Adj	Depicted Use(s)	Notable Details
(No Coverage)	**Property:**		
	Adjoining:		

A copy of the Certified Sanborn Map Report is attached in Appendix D.

4.2.2 City Directories

An EDR City Directory Abstract report was reviewed for data of former occupants of the Property's street address. The following is a generalized summary of the findings of city directory research for past occupants of the Property.

Property	
Use(s) / Occupant(s):	**Years**
Pacifica Elementary School	1976 - 2009

The EDR City Directory Abstract report was also reviewed for listings of historic occupants of the adjoining properties. The following is a general summary of listings of historic adjoining property occupants:

Adjoining Properties	
Use and/or Occupant(s)	**Years**
Residential	1970 - 2017

A copy of the EDR City Directory report is attached in Appendix D.

4.2.3 Historical Topographic Maps

Historical topographic maps of the Property and vicinity obtained from an EDR Historical Topographic Map report (as attached in Appendix D) have been reviewed. The following interpretation of land usage was made by review of the maps:

Year(s)	Summary	
1893, 1898, 1901	**Property:**	Unmapped
	Adjoining:	Unmapped
1941, 1942, 1944, 1947, 1954	**Property:**	No structures; an intermittent stream traverses the Property
	Adjoining:	No structures or other significant features.
1948, 1949	**Property:**	No structures; a pond is depicted along the former intermittent stream channel.
	Adjoining:	No structures or other significant features.
1968	**Property:**	No structures or other significant features.
	Adjoining:	Residential to the east and south
1975, 1997	**Property:**	Unmapped
	Adjoining:	Unmapped
2012	**Property:**	No improvements or significant features were depicted.
	Adjoining:	No improvements or significant features were depicted.

4.2.4 Historical Aerial Photographs

Historical aerial photographs of the Property and vicinity obtained from an EDR Aerial Photo Decade Package report, as attached in Appendix D, and online via www.historicaerials.com were reviewed. The following interpretation of land usage has been made:

Year(s)	Summary of Interpretation	
1938	**Property:**	Undeveloped land with stream channel from northeast to southwest
	Adjoining:	Agricultural and/or undeveloped land
1946, 1953, 1964,	**Property:**	A pond from dammed stream channel; otherwise, undeveloped
	Adjoining:	Undeveloped/rural land. Residential subdivision to the southeast in 1964
1967, 1970	**Property:**	Undeveloped land w/disturbed earth at former pond (no longer present)
	Adjoining:	Residential to the north, east, and south; undeveloped land to the west
1978, 1985, 1989-1991, 1993-2000, 2002, 2003	**Property:**	Pacifica Elementary School structure and grounds
	Adjoining:	Residential
2005, 2009, 2012, 2014, 2016, 2018	**Property:**	Former elementary school structure is no longer present; several modular structures are present 2005-2014.
	Adjoining:	Residential

4.2.5 EDR High-Risk Historical Records

The EDR Radius Map™ report, which is discussed in greater detail in Section 4.3, provided a search of proprietary databases of potential historical high-risk uses at or in the vicinity of the Property. These databases include EDR Historic Cleaners – a database of property addresses with records of historical occupancy by suspected cleaners businesses; EDR Historic Auto – a database of property addresses with records of historical occupancy by potential automotive gas/filling stations and repair facilities; and EDR MGP- a database of sites historically occupied by manufactured gas plants and related facilities.

EDR Database	On-site Listings:	Adjoining/Off-Site Listings
Historic Cleaners: (on-site/adjoining only)	None	None
Historic Auto: (on-site/adjoining only)	None	None
MGP: (1-mile distance)	None	None

4.2.6 Petroleum/Natural Gas Well Review

The historical record sources and the California Geologic Energy Management Division (CalGEM) online mapping application were reviewed for records of historic petroleum and/or natural gas wells at the Property. No record of any historical petroleum/natural gas wells at or adjoining the Property was identified.

4.2.7 Additional Historical Data

Where applicable, the following additional pertinent historical data was obtained:

Interviews/Anecdotal:	The following additional pertinent historical data was obtained: An environmental questionnaire completed by the Oceanside Unified School District indicated that the district has owned the Property since 1971.

Local Gov't Records:	The following additional pertinent historical data was obtained: The Property is listed on the ENVIROSTOR and SCH databases. The listings indicated the Property was on the DTSC - School Investigation database, with a No Action required status as of 11/05/2003. A DTSC letter to the school district dated November 4, 2003 stated *"The additional aerial photographs and a site appraisal report in the Addendum confirm that the site was undeveloped and not used for agriculture prior to construction of the school."*
Prior Env. Reports: (Section 3.1)	Not applicable; no prior reports were provided.
Site Observations:	Indications of historic uses of the Property or adjoining properties were not observed during the site reconnaissance.
Other Sources:	No additional pertinent historical data was obtained.

4.2.8 Summary of Identified Historic Uses

The following table presents a summary of the types and approximate date ranges of identified prior uses of the Property:

Property	
Date Range	**Use**
1938 to early 1970s	Vacant lot with artificial pond from dammed stream channel 1940s to mid-1960s
Mid-1970s to 2010s	Pacifica Elementary School/Oceanside Unified School District
Mid-2010s to present	Vacant lot

The following table presents a summary of the types of identified prior uses of the adjoining properties:

Adjoining Properties	
Date Range	**Use**
1938 to 1953	Rural/agricultural land
1964 to present	Residential

4.2.9 Historical Records Data Failure

The ASTM E1527-13 standard defines data failure as a failure to achieve the ASTM specified historical research objectives after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. The objective is to identify all obvious uses of the property from the present, back to the property's first developed use, or back to 1940, whichever is earlier. Furthermore, records of historic use/conditions should be sought in intervals no less than approximately five years, unless the property conditions appear unchanged over a longer interval.

Objective	Met?	Detail	Significant?
First developed use/date determined?	Yes	The first developed use of the Property was a public elementary school circa 1975.	NA
Record sources at 5-year intervals back to 1940 or first developed use?	No	Historical record gaps exceeding five years were encountered. However, significant site-use changes or undiscovered site uses appear unlikely to have occurred during the record gaps.	No

All obvious prior uses identified?	Yes	See Section 4.2.8.	NA

Please refer to Section 2.3 for additional discussion of data gaps and their significance to the findings of the assessment.

4.2.10 Historic Uses REC Discussion

The Property consisted of vacant land prior to the mid-1970s, with an artificial pond present between the 1940s and 1960s. The Property was acquired by the Oceanside Unified School District in 1971 and the Pacifica Elementary School was subsequently constructed on-site. In approximately 2004, the former school structure was demolished and the Property continued to be used by the district with modular structures until the mid-2010s. The Property has remained unoccupied since approximately 2016.

The review of historical records did not indicate evidence of a REC in connection with the Property.

4.3 Standard Environmental Record Sources

A regulatory database report, titled EDR Radius Map™ Report, prepared by Environmental Data Resources of Shelton, CT was obtained and reviewed. The report provided a search of standard environmental record sources for listings of the Property, adjoining properties and sites within the surrounding area; and has been reviewed for the purpose of identifying listings suggesting a potential impact to the Property due to presence or migration of hazardous substances and/or petroleum products. Additional descriptions of the meaning and significance of the regulatory databases can be found in the regulatory database report in Appendix E. The EDR Radius Map™ Report provided a search of the following database categories in accordance with the requirements of the ASTM Standard E1527-13:

Regulatory Database	Search Distance
Fed. National Priorities List (NPL/a.k.a. "Superfund" sites) & Proposed NPL	1-mile
Fed. Delisted NPL	½-mile
Fed. Superfund Enterprise Management System (SEMS; formerly CERCLIS)	½-mile
Fed. SEMS-ARCHIVE (formerly known as CERCLIS NFRAP)	½-mile
Fed. RCRA Corrective Action Sites (CORRACTS)	1-mile
Fed. RCRA Transport/Storage/Disposal (TSD) sites	½-mile
Fed. RCRA Generators (LQG, SGQ & CESQG)	Site & Adjoining
Fed. Institutional Control/Engineering Control (IC/EC) Registries	Site only
Fed. Emergency Response Notification System (ERNS)	Site only
State/Tribal Hazardous Waste Sites (SHWS)	1-mile
State/Tribal Landfill and/or Solid Waste Disposal (LF/SWF)	½-mile
State/Tribal Leaking Storage Tanks	½-mile
State/Tribal Registered Storage Tanks	Site & Adjoining
State/Tribal IC/EC Registries	Site
State/Tribal Voluntary Cleanup Sites	½-mile
State/Tribal Brownfields	½-mile
Additional Federal, State, Tribal and Local Environmental Databases	Variable

Reported distances for adjoining listings discussed in Section 4.3.4, if applicable, are approximate and indicative of the presence of a public roadway or right-of-way between the adjoining site and Property.

The reported gradients indicated where applicable in Sections 4.3.4 and 4.3.5 have been estimated based on a number of factors including but not necessarily limited to field observation, review of topographic maps, database listing details and/or site specific geo-technical data.

4.3.1 Supplemental Database Listings

The regulatory database report was also reviewed for listings on supplemental databases, in addition to the Standard Environmental Record Sources. Any property or adjoining property listings on such databases of significant concern, if identified, is discussed in Sections 4.3.3 and 4.3.4. Otherwise, none of the other supplemental database listings identified by the regulatory database report are considered to be a REC in connection with the Property.

4.3.2 Limited Tier I Vapor Encroachment Screening

Limited analysis of the details of on-site, adjoining and vicinity database sites was conducted to identify potential sources of sub-surface vapor encroachment. This review was based on elements of the ASTM "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" (ASTM E 2600-15); and also on elements of "Methodology for Identifying the Area of Concern Around a Property Potentially Impacted by Vapor Migration from Nearby Contaminated Sources" (Buonicore, 2011-S-103-AWMA). Vicinity database sites pertaining to non-petroleum product releases within 1,760 feet of the Property in the up-gradient direction, 365 feet of the Property in the cross gradient direction and 100 feet of the Property in the down gradient direction; and vicinity database sites pertaining to petroleum product releases within 528 feet of the Property in the up-gradient direction, 165 feet of the Property in the cross gradient direction and 100 feet of the Property in the down gradient direction were reviewed to identify active contamination sites with the potential to affect subsurface vapor conditions at the subject property. The potential for vapor encroachment was considered in assessing whether or not a REC exists in connection with the Property when reviewing applicable sites within those distances.

Regulatory database sites with active petroleum or non-petroleum releases that are considered to constitute a vapor encroachment condition (VEC) to the Property, if any, are identified and discussed in Sections 4.3.3, 4.3.4 and 4.3.5.

4.3.3 Property Listings

The following listings of the Property were identified:

Name/Address:	Pacifica Elementary School / 4991 Macario Street
Database(s):	ENVIROSTOR, SCH, CERS
Data Discussion:	The ENVIROTOR/SCH listing indicated that the Property was on a DTSC – School Investigation site type, with a No Further Action letter provided as of 11/05/2003, indicating no contaminants had been found. The CERS listing indicated the Property name, address, and a CERS ID of 37820031. Hillmann reviewed available electronic documents posted on the

	Envirostor database, including a letter dated November 4, 2003 from the DTSC to the school district. The letter stated: "*The Department of Toxic Substances Control (DTSC) reviewed the Phase I Environmental Site Assessment Addendum (Addendum), titled 'Additional Environmental Background Data," dated October 7, 2003 and received October 14, 2003. DTSC has also reviewed additional correspondences, received on September 5, and October 31, 2003. All additional information was prepared by Construction, Testing, and Engineering, Incorporated (CTE). The Addendum and correspondences were forwarded in response to a previous determination that a Preliminary Environmental Assessment was required for the site. Based on review of the original Phase I Environmental Assessment, dated November 4, 2002, DTSC originally determined a PEA was required on August 14, 2003.* *"The Site consists of approximately 10-acres, currently occupied by an elementary school. Based on the aerial photographs provided in the Phase I, dated November 14, 2002, the site appears to be located in an agricultural region during the years of 1950 through 1965. Since information was not provided to substantiate the site was not used for agriculture, DTSC had concerns that persistent agricultural chemicals from pesticides and fertilizers may have impacted the site. Also, additional information was required for the evaluation of lead-based paint.* *"The additional aerial photographs and a site appraisal report in the Addendum confirm that the site was undeveloped and not used for agriculture prior to construction of the school. Additional information in the Addendum and correspondences demonstrated the lead-based paint evaluation was complete and adequately conducted.* *"Based on the information provided in the Addendum and a site visit conducted by DTSC on September 11, 2003, neither a release of hazardous material nor the presence of naturally occurring hazardous material, which would pose a threat to human health or the environment under unrestricted land use, was indicated at the site. Therefore, DTSC concurs with the conclusion of the Addendum that further environmental investigation of the site is not required and hereby approves the Addendum. As with any real property, if previously unidentified contamination is discovered at the site, additional assessment, investigation, and cleanup may be required."* A separate DTSC letter to the district dated August 14, 2003, makes reference to additional information requested by DTSC and submitted by the district regarding on-site "import fill". Hillmann has requested copies of all environmental files for the former school investigation from both the school district and the DTSC. The available information in the November 4, 2003 DTSC letter and the closed Envirostor case status does not suggest a REC in connection with the former school investigation. However, a review of all available environmental documents associated with the Envirostor case has not been conducted and remains pending.
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.
VEC Discussion:	Based on the available data, a VEC is not suspected.

4.3.4 Adjoining Property Listings

The following adjoining property listings were identified. Reported distances, where applicable, are approximate and indicative of the presence of a public roadway or right-of-way between the adjoining site and Property. The reported gradient has been estimated based on a number of factors including but not necessarily limited to field observation, review of topographic maps, database listing details and/or site specific geo-technical data.

Name/Address:	None

Data Discussion:					
REC Discussion:					
VEC Discussion:					

4.3.5 ASTM Search Distance Findings

The following is a discussion of non-adjoining sites identified as located within the ASTM specified search distance surrounding the Property. In order to keep this discussion informative and concise, discussion(s) is/are provided of the listed site(s) for each database category that appears most likely to impact the Property based on distance, area topography and/or regulatory status. Listings of sites within the applicable search distances not specifically discussed below were reviewed and concluded not to be RECs in connection with the Property or VECs based on various factors including distance, area topography, known or inferred groundwater flow direction and/or regulatory status. Listings for the following databases, if identified, have been discussed above in Sections 4.3.3 and 4.3.4: Registered Storage Tanks, Federal RCRA Generators, Federal and State EC/IC, ERNS. A copy of the full regulatory database report, including available details of all listed sites, is included in Appendix E.

Federal NPL				**# of sites:**	1	**Search Distance:**	1-mile
Notable Listing:	Camp Pendleton Marnie Corps Base						
Distance in feet:	4,191	**Direction:**	NW	**Gradient:**	Up		
Data Discussion:	The NPL listing indicated the site has been utilized as a training base facility for the fleet marine force since 1941. Groundwater and soil are contaminated at the site with various hazardous substances such as copper, arsenic, lead, dioxins, DDT, heptachlor, lindane, zinc, lead, benzene, xylene, TCE, PCBs, PAHs, methyl ethyl ketone, and silvex was found in multiple drinking wells, and 30,000 tons of contaminated soil has been excavated and disposed off-site since 1996. Since 2004, the EPA has been actively involved in the cleanup of the site, where leaking UST are being cleaned, along with contaminated groundwater and drinking water are being excavated and diluted of tritium. The clean-up activities are on-going, however, based on the distance this listing does not indicate a REC with connection to the Property.						
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.						
VEC Discussion:	Based on the available data, a VEC is not suspected.

VEC Discussion:							

State HAZARDOUS WASTE SITE				**# of sites:**	5	**Search Distance:**	1-mile
Notable Listing:	Morrow Hills Elementary / El Mirlo Drive						
Distance in feet:	2,465	**Direction:**	NNE	**Gradient:**	Cross		
Data Discussion:	ENVIROTOR/SCH listing indicated that the Property was on a DTSC – School Investigation site indicating that potential pesticides from production such as DDE, zinc, antimony, and nickel compounds were found in the soil. However, the site was granted with a No Further Action letter provided as of 05/04/2000.						
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.						
VEC Discussion:	Based on the available data, a VEC is not suspected.						

State SOLID WASTE FACILITY/LANDFILL				**# of sites:**	0	**Search Distance:**	½-mile
Notable Listing:	None						
Distance in feet:		**Direction:**		**Gradient:**			
Data Discussion:							
REC Discussion:							
VEC Discussion:							

State LEAKING STORAGE TANKS				# of sites:	3	Search Distance:	½-mile
Notable Listing:	7-Eleven Store #20342 / 487 Vandegrift						
Distance in feet:	905	**Direction:**	SSE	**Gradient:**	Down		
Data Discussion:	The LUST listing indicated the soil was contaminated at the site with gasoline from a leaking UST, with a leak first confirmed as of 09/13/1993. Additionally, TPHg and benzene were detected in groundwater samples, and by 1996 approximately 50 gallons of liquid waste was removed from two wells at the site. The site underwent remedial and excavation activities, and was granted a No Further Action Letter as of 04/27/2015; however, based on the down-gradient location this listing does not indicate a REC with connection to the Property.						
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.						
VEC Discussion:	Based on the available data, a VEC is not suspected.						

State VOLUNTARY CLEANUP SITES				# of sites:	0	Search Distance:	½-mile
Notable Listing:	None

UNMAPPED/ORPHAN LIST SITES	
Notable Listings:	Hillmann has also reviewed a list of unmapped sites (a.k.a. "Orphan List" sites) indicated by the database report. Unmapped sites that were identified as falling within an applicable specific search distance or warranting discussion have either been discussed in the preceding tables or are detailed below: None

4.4 Additional Environmental Record Sources

Requests have been submitted to local, municipal and state agencies for pertinent records pertaining to the Property, particularly with regard to potential environmental concerns such as petroleum storage tanks, storage and usage of hazardous substances and petroleum products, and/or known or suspected environmental contamination. Where applicable, internet research of government environmental regulatory databases was also conducted, as well as a general cursory internet search of the Property address, for information indicative of a REC. The following table summarizes the findings of the research:

Source	Type of Request	Outcome
San Diego Air Pollution Control District	FOI request	A response was recieved stating that no records were found.

Source	Type of Request	Outcome
City of Oceanside	FOI request	No response was received prior to report issuance.
San Diego County Department of Environmental Health	FOI request	A response was recieved stating that no records were found.
DTSC	FOI request	A response was recieved stating that no records were found.
City of Oceanside Fire Department	FOI request	No response was received prior to report issuance.
Regional Water Quality Control Board (RWQCB)	FOI request	A response was recieved stating that no records were found.
CA DTSC (Envirostor)	Online search	Hillmann reviewed available on-line records pertaining to the Property. The following pertinent records and/or information was obtained: DTSC letter dated Aug 4, 2003, referencing a submittal regarding on-site "import fill".
CA SWRCB (GeoTracker)	Online search	Hillmann reviewed available on-line records pertaining to the Property. No information indicative of a REC was identified.
EPA MyProperty	Online search	Hillmann searched online for records pertaining to the Property. No records pertaining to the property were found.
EPA Envirofacts	Online search	Hillmann searched online for records pertaining to the Property. No records pertaining to the property were found.
Real Quest	Online search	Basic Property information such as parcel number, date of construction, and building square footages were collected. Pertinent information, where obtained, is referenced in the appropriate sections of this report.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

The site reconnaissance consisted of visual and/or physical observations of the Property and improvements, adjoining properties as viewed from the Property boundaries and the surrounding area based on visual observations from adjoining public thoroughfares. Building exteriors were observed at ground level, unless otherwise indicated. Where applicable, representative areas of building interiors were accessed and observed to the extent they were made safely accessible with the cooperation of the site escort.

Site Inspection Personnel:	Ms. Gabriela Cyrulik
Property Escort/Company:	Unescorted
Inspection Date:	October 12, 2021
Weather Conditions:	Sunny, 70 degrees F

5.1.1 Significant Inaccessible Areas

No significant areas of the Property inaccessible at the time of the inspection were noted.

5.1.2 Significant Limiting Site Conditions

No significant limiting site conditions were noted at the time of the site reconnaissance.

5.2 General Site Setting

5.2.1 Site and Vicinity Characteristics

Abutting Roadways:	Macario Drive to the north; Roja Drive to the east
Current Property Use:	Vacant lot
Evidence of Past Property Uses:	Asphalt remaining from the elementary school that was previously on the Property
Evidence of Past Adjoining Property Uses:	None observed
Surrounding Area Uses:	Residential

5.2.2 Current Adjoining Property Uses

Dir	Street Address	Description
N	Macario Dr	Residential
E	Roja Dr	Residential
W	Marblehead Bay Dr	Residential
S	Redondo Dr	Residential

No visual observations indicative of a potential environmental concern were noted on the adjoining properties.

5.2.3 Topographic Characteristics

Terrain:	Flat to gently sloping
Direction of Downward Slope:	Towards the east-southeast
On-site Water Bodies:	None observed
Other Significant Features:	None observed

5.2.4 General Description of Structures

Buildings/# of Floors	N/A
Approx. Building Area:	N/A
Approx. Year Built:	N/A
Ancillary Structures:	The site contains a sewage pumping station, areas of pavement and associated utilities that are remnants of the former school facility.
Sources of Heating & Cooling:	No heating or cooling systems were present at the Property.
Potable Water/Sewage Disposal:	Municipal utility connections are available; no active service present.

5.3 Interior & Exterior Observations

5.3.1 Storage/Usage of Hazardous Substances and Petroleum Products

The following hazardous substances and petroleum products were observed to be stored and used by property occupants:

Occupant	Substance	Qty/Container Type	Storage Conditions
NA	No significant storage or use noted		

5.3.2 Drums

No hazardous substance or petroleum product drums were noted on the Property.

5.3.3 Unidentified Substance Containers

No unidentified substance containers suspected of containing hazardous substance or petroleum product were noted on the Property.

5.3.4 Other Hazardous Substances/Petroleum Products

No other containers of hazardous substances or petroleum products were noted on the Property.

5.3.5 Bulk Petroleum/Hazardous Material Storage Tanks

The following storage tanks for bulk petroleum or hazardous material storage were identified or reported to be present; or are suspected to be present based on visual observations:

AST/ UST	Product	Capacity	Construction	Year Installed	Status	Location/Notes
(none)						

5.3.6 PCBs in Oil Filled Electrical/Hydraulic Equipment

The existing site improvements were established prior to the ban of PCBs in 1979. The following oil-filled electrical/hydraulic equipment was identified at the Property:

Hillmann observed two utility-owned (2) pad-mounted transformers located on the northwest corner of the Property. No signs of staining and/or leaking was observed.

5.3.7 Odors

No strong, pungent or noxious odors were noted at the Property.

5.3.8 Pools of Liquid

No standing water or pools of liquid likely to contain hazardous substances or petroleum products were noted at the Property.

5.3.9 Interior Stains or Corrosion

No interior areas were identified at the Property.

5.3.10 Interior Drains/Sumps

No interior areas were identified at the Property.

5.3.11 Exterior Pits/Ponds/Lagoons

The following exterior pits, ponds and/or lagoons were identified on the Property in connection with waste treatment or disposal.

A sewage lift station associated with the former school facility was observed at the Property. Considering it was used to handle sanitary sewage at a school, it is not considered to be a REC in connection with the Property.

5.3.12 Stained Soil, Pavement/Stressed Vegetation

No stained soil, pavement or stressed vegetation was observed at the Property.

5.3.13 On-Site Solid Waste Disposal/Fill Material

No evidence of any on-site solid waste dumping was noted at the Property. No evidence of recently deposited fill materials was observed at the Property.

The Property historically consisted of undeveloped land traversed by an intermittent steam channel. From the 1940s to the 1960s, the stream channel was dammed forming an artificial pond on portions of the Property. The pond and stream channel were drained and/or filled by the late 1960s, with the school structure developed in the early to mid-1970s. Given the former presence of a pond and stream channel, it is possible that imported undocumented fill materials were placed at the Property during this period.

5.3.14 Waste Water

No sanitary sewer discharges were identified at the Property.

Storm water runoff at the Property is discharged via a system of catch basins and on-site dry wells. No additional waste water discharges were identified at the Property.

5.3.15 Septic Systems

No septic systems were identified at the Property.

5.3.16 Wells

No potable, monitoring or other groundwater wells were identified at the Property.

5.3.17 Railroad Spurs

No railroad spurs were identified on the Property.

6.0 INTERVIEWS

6.1 Interviews with Past and Present Owners and Occupants

Subject	Name/Affiliation	Summary
Property Owner / Representative	Andrea Norman / Associate Superintendent Business Service / Oceanside Unified School District	Ms. Norman completed an environmental questionnaire, which is included in Appendix C. Pertinent information from the questionnaire, where applicable, have been referenced in various sections of this report.
Property Occupants	Not applicable	Property was unoccupied.
Past Owners, Occupants, Operators	Not applicable	Past owners/occupants of the Property were not available for interview at the time of the assessment.
Owners/Occupants of Adjoining or Nearby Properties	Not applicable	The Property was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews with adjoining or nearby property owners or occupants were not conducted.

6.2 Interviews with State and/or Local Government Officials

Written and on-line requests for environmental records of the Property from State and Local governmental agencies are detailed in Section 4.4.

7.0 BUSINESS ENVIRONMENTAL RISKS

In accordance with the contract agreement for this assessment, Hillmann has performed cursory reviews of several potential Business Environmental Risks (also known as "Non-Scope Considerations"). The ASTM E1527-13 standard defines the term business environmental risk (BER) as, *"a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice."*

7.1 Asbestos-Containing Material (ACM)

The contracted scope of work included a cursory visual screening of the accessed portions of buildings at the Property built prior to 1990 for suspect asbestos containing materials (ACM). The information provided in this section, where applicable, is limited to identification of potential suspect materials in the readily accessible and observed areas of the building, and their general condition. This is not intended to be a comprehensive survey for the presence of ACM, and no testing has been conducted.

No buildings were present at the Property.

7.2 Lead-Based Paint

The contracted scope of work included a cursory visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1980. This is not intended to constitute a comprehensive survey for LBP or potential lead hazards, and no testing has been conducted.

No residential buildings were present at the Property.

7.3 Radon

Data compiled by the USEPA, as summarized by the regulatory database report, indicated that the Property is located in an area classified as Zone 3 or 'low risk' area for radon. Radon testing was not included in the scope of this assessment.

7.4 Mold/Microbial Damage

As per the contracted scope of work, Hillmann conducted a cursory visual screening of the accessed areas of the building for evidence of significant damage to building materials and finishes as result of moisture intrusion and/or mold/microbial growth. Given the absence of building structures at the Property, mold/microbial growth is not considered to be a significant environmental concern.

7.5 NWI Mapped Wetlands

As indicated in the Physical Setting Source table of Section 4.1, no NWI mapped wetlands areas were depicted at the Property by the EDR Geocheck-Physical Setting Source Addendum (attached in Appendic E).

The scope of work for this assessment excludes a visual determination of regulated wetlands at the Property. It is emphasized that, regardless of the wetlands data obtained via the EDR Geocheck-Physical Setting Source Addendum, a delineation of regulated wetlands by a qualified professional would be warranted to determine the presence or absence of regulated wetlands at the Property.

7.6 Lead in Drinking Water

The scope of work for this assessment included a review of the potential for elevated levels of lead in drinking water by determining the source of the drinking water supply and a review of available compliance or testing data.

No potable water service was identified at the Property. It is noted that municipal water connection is available at the Property from the City of Oceanside. A recently published water quality report from the utility indicated compliance with USEPA water quality standards for lead in drinking water. A copy of the report has been attached in Appendix F.

QUESTIONNAIRES/USER PROVIDED DOCUMENTATION

HILLMANN CONSULTING

ASTM E 1527-13/AAI - USER QUESTIONNAIRE

Instructions: This form should be completed by a representative of the USER of the Phase I ESA report and returned to Hillmann via email or in-person. **The report USER is the entity on whose behalf the assessment is being prepared and that will be relying on the report for liability protections.**

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"),188 the USER must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The user should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete. Please complete the following questionnaire and provide any of the referenced information (if available) to Hillmann.

USER Company Name:	MLC Holdings, Inc.	**USER Mailing Address:**	5 Peters Canyon Road, Suite 310 Irvine, CA 92606
Respondent Name & Email Address:	Johanna Crooker johanna.crooker@mlcholdings.n	**Date of Completion:**	10/8/2021

Property Address:	4991 Macario Drive Oceanside, CA 92057	**YES**	**NO**	**DETAIL (optional):**
Environmental liens that are filed or recorded against the property: Did a search of recorded land title records identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?		☐	☑	
Activity and use limitations that are in place on the property or that have been filed or recorded against the property: Did a search of recorded land title records (or judicial records where appropriate, identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?		☐	☑	
Specialized knowledge or experience of the person seeking to qualify for the LLP: Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?		☐	☑	
Relationship of the purchase price to the fair market value of the property if it were not contaminated: Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?		☐	☑	

HILLMANN CONSULTING

Property Address:	4991 Macario Drive Oceanside, CA 92057	YES	NO	DETAIL (optional):
Commonly Known or Reasonably Ascertainable Information: Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? **ANSWER BELOW**				
- Do you know the past uses of the property?		☑	☐	Elementary School
- Do you know of specific chemicals that are present or were once present at the property?		☐	☑	
- Do you know of spills or other chemical releases that have taken place at the property?		☐	☑	
- Do you know of any environmental cleanups that have taken place at the property?		☐	☑	
The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation: Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?		☐	☑	
Litigation/Administrative Proceedings/Government Notices As the User of this ESA, do you have knowledge of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property; and (3) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.		☐	☑

PHASE I ESA - ENVIRONMENTAL QUESTIONNAIRE

Instructions: This questionnaire should be completed by the property owner, or representative(s) designated by the owner as being most knowledgeable of the physical characteristics, site use history and environmental condition of the subject property. Please complete, sign at bottom of page 5, and return to Hillmann via email, or in person during the site inspection. ***Hillmann contact name:*** Shilpa Sunil ***Email:*** ssunil ***@hillmannconsulting.com***

Document Request/Environmental Report Disclosure: Copies of existing environmental reports and other documents pertinent to the environmental condition of the Property are requested for review. This includes, but is not necessarily limited to, the following types of documents.

- Environmental assessments (Phase I ESA, Transaction screen ESA, Preliminary Assessments, etc.)
- Subsurface or water testing: (Phase II, site investigation, subsurface testing, drinking water, groundwater monitoring, etc.)
- Site remediation documents, and any associated regulatory correspondences
- Petroleum storage tank testing/closure reports, and any associated regulatory documents.
- Building survey/inspection/testing reports for asbestos, lead, mold or radon; any associated O&M documents
- Environmental permits/registrations/certifications (bulk petroleum, waste discharge, emissions, potable wells, etc.).
- Environmental/health/fire code regulatory violations or citations

	Previous Environmental Investigations	
1.	Have any previous environmental investigations (see list on Page 1) been performed at the Property? *If YES, please briefly elaborate below and forward copies of the report(s):* Based on review of the Title report, there are no environmental investigations involving the property.	Yes: ; No: ; D/K: x
	Property & Adjoining Usage	
2.	To the best of your knowledge, is the Property or any adjoining property currently occupied or formerly occupied for industrial purposes? *If YES, please elaborate below:* For the last 50 years, the property has not been occupied for industrial purposes. OUSD does not have knowledge about former occupant uses.	**Property:** Yes: ; No: x; D/K: ; **Adj. Property:** Yes: ; No: ; D/K: x
3.	Is the property or any adjoining property currently used, or have they ever been used, as a gasoline filling station, dry cleaning facility, automotive service/repair shop, auto body repair shop, commercial printing facility, photo development laboratory shop, junkyard, landfill, or as a waste treatment, storage disposal, recycling or processing facility? *If YES, please elaborate below:* For the last 50 years, the property has not been occupied for these purposes. OUSD does not have knowledge about former occupant uses.	**Property:** Yes: ; No: x; D/K: ; **Adj. Property:** Yes: ; No: ; D/K: x
4.	Have any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials been dumped above grade, buried and/or burned on the property?	Yes: ; No: ; D/K: X
	Bulk Storage Tanks	
5.	Are there currently, or have there been previously, any registered or unregistered above ground or underground storage tanks located at the Property? *If YES, please provide number, size, age of tanks, permits, closure reports, regulatory agency correspondence, and related information.*	**Currently:** Yes: ; No: ; D/K: x; **Previously:** Yes: ; No: ; D/K: x
6.	Are there currently, or have there been previously, any vent pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property? *If YES, please elaborate below:*	**Currently:** Yes: ; No: ; D/K: x; **Previously:** Yes: ; No: ; D/K: x
7.	Are there currently, or have there been previously, any leakage of hazardous substances or petroleum products from above ground or underground storage tank systems at the Property? *If YES, please elaborate below:*	**Currently:** Yes: ; No: ; D/K: x; **Previously:** Yes: ; No: ; D/K: x

HILLMANN
CONSULTING

	Spills, Releases, Wastes	
8.	Are there currently, or have there been previously, any waste discharges on or adjacent to the property, other than storm water or into a municipal sanitary sewer system? *If YES, please elaborate below:* City of Oceanside's sewage pump station failed in the late 1980's - early 1990's	**Currently:** Yes: ; No: ; D/K: x **Previously:** Yes: X; No: ; D/K:
9.	Are there currently, or have there been previous, any septic systems, dry wells or leach fields on the property? *If YES, please elaborate below:*	**Currently:** Yes: ; No: ; D/K: x **Previously:** Yes: ; No: ; D/K: x
10.	Are there currently, or have there been previously, any flooring, drains or walls located within the facility that are, or have been, stained by substances (or, in the case of drains, used for) other than water or are emanating foul odors? *If YES, please elaborate below:*	**Currently:** Yes: ; No: ; D/K: x **Previously:** Yes: ; No: ; D/K: x
11.	Are there currently, or have there been previously, any spills or releases of hazardous substances or petroleum products within the building(s) or on the exterior of the Property? *If YES, please elaborate below:* see #8	**Currently:** Yes: ; No: ; D/K: x **Previously:** Yes: X; No: ; D/K:
12.	Has any non-native and/or contaminated fill material been deposited on the Property? *If YES, please elaborate below:*	Yes: ; No: ; D/K: x
13.	Have any current or former property occupants generated hazardous wastes or other wastes (such as waste oil, or medical wastes) that required non-conventional storage, handling and/or disposal methods? *If YES, please indicate type of waste and the name of the waste handling contractor:*	Yes: ; No: ; D/K: X
	Transformers/Hydraulic Equipment	
14.	Are any power transformers, capacitors, oil-filled switchgear or hydraulic equipment present at the Property? *If YES, please elaborate below; and indicate approximate age and ownership:* SDGE transformers at the entrance of property	Yes: X; No: ; D/K:
15.	If hydraulic equipment is present, indicate approximate age of equipment & ownership:	
	Regulatory Disclosure	
16.	Have there been any environmental liens or governmental notification or involvement relating to past or current use or disposal of hazardous substances with respect to the property of any facility or structure located on the property? *If YES, please elaborate below:* Based on review of the Title report, there are no environmental liens or governmental notifications regarding disposal of hazardous waste involving the property.	Yes: ; No: X; D/K:
17.	If the property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system, or has the well been designated as contaminated by any government environmental/health agency? *(If YES, please elaborate below. If not applicable, please check* NO*)*	Yes: ; No: X; D/K:

18.	Is there any environmental litigation, administrative action or cleanup action involving the property related to a release or threatened release of any hazardous substance or petroleum product? *If YES, please elaborate below:* Based on review of the Title report, there is no environmental litigation, administrative action, or cleanup action involving the property.		X	
		Yes	No	D/K
19.	Are you aware of testing of any environmental media (soil, groundwater, surface water, etc.) at the property which identified levels of contaminants in excess of regulatory standards and/or cleanup guidelines? *If YES, please elaborate below:*			X
		Yes	No	D/K
	Additional Environmental/Building Conditions			
20.a.	Has testing of building materials for asbestos ever been conducted at the Property? *If YES, please forward a copy of test results and/or survey reports:*	X		
		Yes	No	D/K
20.b.	Are any asbestos containing materials known to be present at the Property? *If YES, please elaborate:* All buildings and structures were demolished and removed		X	
		Yes	No	D/K
20.c.	Is there an Asbestos Operations & Maintenance (O&M) program in place? *If YES, please forward a copy.*		X	
		Yes	No	D/K
21.a.	Has lead paint testing/risk assessment ever been conducted at the Property? *If YES, please forward a copy of test results.*	X		
		Yes	No	D/K
21.b.	Is lead-based paint known to be present at the Property? *If YES, please elaborate:*		X	
		Yes	No	D/K
21.c.	Is there a lead paint Operations & Maintenance (O&M) (or equivalent) program in place? *If YES, please forward a copy.*		X	
		Yes	No	D/K
21.d.	For any residential buildings built prior to 1987, has any testing for lead in drinking water been performed? *If YES, please provide a copy of all test results.*			x
		Yes	No	D/K
21.e.	If Yes to 23.d., has any lead testing of drinking water indicated results exceeding 15 parts per billion (or microgram per liter)? *If YES, please elaborate and forward documentation of any mitigation performed to reduce lead concentration in drinking water.*			x
		Yes	No	D/K
22.a.	Has radon testing ever been conducted at the Property? *If YES, please forward a copy of test results.*			x
		Yes	No	D/K
22.b.	Are there any radon mitigations systems at the Property? *If YES, please provide details of the systems including the most recent service records.*			x
		Yes	No	D/K
23.a.	Are there any problems with water intrusion, water damaged surfaces or excessive mold growth within the buildings? *If YES, please elaborate:*		X

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.
